SOURCING LICENSED MEDIA FOR USE IN CLOUD CONCEPTS

Prepared by the Deakin Learning Futures Teaching Development Team

deakin.edu.au/learning-futures

learningfutures@deakin.edu.au

CRICOS Provider Code 00113B

Purpose:	Provide an overview of sourcing media for use in cloud concepts, including relevant copyright and licensing laws.
Audience:	All staff
Why learn about sourcing images for use in cloud concepts:	Knowing how to source properly licenced media for use in your cloud concepts will enhance your productions and protect you from copyright infringements.

Copyright at Deakin

Deakin Learning Futures works with the University Solicitors Office to provide assistance and advice on copyright matters. When sourcing media that is not your original work to use in a cloud concept resource, you need to be acutely aware of your responsibilities as a member of staff to ensure compliance with the law. Deakin provides a range of information for staff on copyright guidelines and requirements. Visit the [staff services](#)¹ page on copyright for more information.

There are also a range of regular workshops and a consultation services available for staff to address copyright matters. For a list of dates and consultation service instructions, visit the [workshops and consultations](#)² page.

Licenses and agreements at Deakin

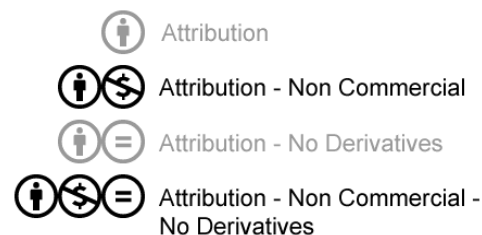

The use of media and materials at Deakin is guided by a range of licenses including CAL licence, Screenrights License, Educational Music Licenses and Creative Commons Licenses. These set the legal provisions for using media for your educational projects, including cloud concepts. It's important that you understand how the licenses affect your ability to use certain media. Visit the [licenses and agreements](#)³ information page for more info.

When you are planning to use media in your cloud concept, always consider copyright matters as soon as you begin. Copyright compliance is best dealt with BEFORE you attempt to publish your work. Since you may need to obtain permission to use certain materials in your production, make sure you consider copyright compliance in the planning stage of your cloud concept.

Creative Commons

Creative Commons licences are available as an alternative to retaining full copyright for copyright owners. The framework allows copyright owners to licence their work for use on certain terms, so that a user does not have to seek permission. There are four main licences; Attribution, Non-commercial, No derivatives and Share alike. Often you will see visual representations of a Creative Commons license as in **Figure 1**. Creative Commons licensing applies to many of the images, audio and video that you might want to use in your cloud concepts, so it's important that you know which licenses you can use. For more information visit the [Creative Commons](#)⁴ information page on the Deakin website and visit www.creativecommons.org for official documentation. You will also find a useful search engine to help you locate Creative Commons licenced media.

retrieved 8 July 2013

The trouble with Creative Commons licensed media is that it can be confusing and could accidentally lead you to use something illegally while thinking it is ok. When sourcing online content for your cloud concepts, it is much safer to purchase official licenses for images and videos from microstock providers. These types of providers can guarantee a license agreement to ensure you have the right to use an image or video in your production. Each item will come with its own unique license and outline the rights you have purchased to use the media. There are a range of different licenses on offer, so be sure to understand them before purchasing and using the media in your concept.

Table 1 Reputable microstock providers

Resource	Description	Features
iStockphoto www.istockphoto.com	iStockphoto sells photos, illustrations, video, flash animation, music and sound effects. A royalty free license is attached to each purchase and file can be used as many times as the buyer wants. iStock also includes Editorial images.	<ul style="list-style-type: none"> • Over 10 million files • 115,000+ contributors • 7 million members • 45,000 files added weekly • Standard and extended licenses • Royalty-free materials with legal guarantee • Feature-rich search functionality • Provide a link to the licenses page
