*This course title is applicable up to 2019 only. From 2020 the course title has changed to Bachelor of Nutrition Science (Honours)*

## Course overview

Take the next step in your understanding of the effects of nutrition on our population with a Bachelor of Food and Nutrition Sciences (Honours). You will complete coursework alongside an original research project, and develop a unique perspective of research occurring within Australia's \$20 billion dollar food industry.

Are you ready to uncover research that could change society's perception of food?

Discover more about your area of interest within food and nutrition sciences by completing an honours year. You will not only build on your foundation knowledge of nutrition, but also enhance your skills to confidently conduct an original research project.

Contribute to knowledge in your specialised area while gaining practical research experience among an ever-developing field.

Paired with a supervisor who is an expert in their field, you will complete an original piece of research under their guidance. Along the way, you will gain an understanding of research methods and design, as well as experience in project planning and implementation.

Examples of previous research projects include:

- The political construction of obesity: a framing analysis of Australian parliamentary debates about junk-food advertising to children.
- The role of visual cues on flavour perception and liking of rice.
- Factors predictive of postoperative clinical outcomes in gastrointestinal surgical patients: A prospective observational study.
- Some of the research being conducted within our research centres such as the Food and Mood Centre and Global Obesity Centre includes the impact of food on mental health issues, such as depression, and the cost effectiveness of obesity prevention policies in Australia.

Deakin is home to leading Australian research centres CASS (Centre for Advanced Sensory Science) and IPAN (Institute for Physical Activity and Nutrition), whose studies are at the forefront of food and nutrition research. You will also have the opportunity to study in our state-of-the-art food and nutrition facilities – including industry-standard food sensory labs – that will provide you with hands-on experience to put your research to the test.

By completing your honours degree with Deakin's School of Exercise and Nutrition Sciences, you will graduate with the relevant industry knowledge to pursue a career or complete further research and study. With over 150 partnerships spanning government and organisations within the health field, your learning will be relevant to industry.

Graduate with the knowledge and skills required to confidently provide evidence-based advice regarding food and its impact on our health within community settings.

## Indicative student workload

You should be able to commit 35 hours a week to your honours degree.

## Professional recognition

Not applicable

## Career opportunities

With this qualification you will have the knowledge and advanced research skills to apply to careers in areas such as:

- education
- food policy and regulation
- industry researcher
- nutrition marketing and research
- quality assurance
- research

You will also be will equipped with the skills to progress into higher degrees by research or career pathways with a research focus, including industry research or academia. Your understanding of research will ensure you are regarded highly by employers with advanced skills to critically analyse and problem-solve issues within the food, nutrition and health-related sectors.

## Participation requirements

Engagement with online course material and scheduled classes (on campus). Regular meeting with project supervisors. On campus participation in other course events as required.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course is a pathway into Higher Degrees by Research.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Acquire advanced knowledge of the philosophies, ethics, methods and principles of research in one or more discipline areas of practice in food science and nutrition. Apply this knowledge to plan and execute a substantial research project.
Communication	Demonstrate advanced oral and written communication skills in the clear and coherent communication of research questions, design and outcomes to a diverse audience.
Digital literacy	Acquire advanced skills in using digital technologies to research, analyse, synthesise and disseminate evidence-based information to an academic audience and specialists in the field of food science and nutrition. Use appropriate technologies to manage data and apply methodologies applicable for the food and nutrition sciences.
Critical thinking	Employ intellectual independence to critically analyse, evaluate and synthesise scientific literature and to apply appropriate methodologies and analytical techniques to answer the research question. Apply advanced theoretical knowledge to interpret outcomes and to identify how they contribute to advancing the field of food and nutrition science.
Problem solving	Identify an original research question and, under supervision, apply appropriate theories and methodologies to address this question in an ethical manner.
Self-management	Take initiative to identify personal learning goals and needs in order to undertake and manage an independent research project including the communication of research outcomes.
Teamwork	Contribute constructively and collaboratively as a member of research and professional team of specialists, peers, academics and others from a range of disciplines and backgrounds.
Global citizenship	Apply ethical standards governing research and professional practice in the field of food science and nutrition whilst maintaining confidentiality, and respecting inclusive, cultural sensitivities.

## Course rules

To complete the Bachelor of Food and Nutrition Sciences (Honours) students must attain 8 credit points, including two coursework units in research methods and research issues and an independent research project. Part-time students are required to complete the coursework components in their first year of study.

Attendance and presentation at the School Honours Conference is a hurdle requirement.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

#### Trimester 1

HAI010 Academic Integrity (0 credit points)  
HBS400 Research Methods  
HSE401 Developing Research Skills

#### Trimester 2

HSN414 Honours Research Project

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

All 8 credit points of the course are comprised of research-related study (2 x 2 credit point units) or research (1 x 4 credit point unit). 100% of the course's research and research-related study is specifically assessed.

# Bachelor of Nursing (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Nursing (Honours)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne), Waterfront (Geelong), Warrnambool
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	006227K
<i>Deakin course code</i>	H421
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Focusing on research, the honours year builds on the foundations established in your undergraduate degree. You will study a particular topic of professional interest in greater depth and create pathways to specialisations and further research or study. The Bachelor of Nursing (Honours) is a specialised year of study taken after the completion of a Bachelor of Nursing, entry to practice Master's degree or combined degrees.

For entry into senior nursing and midwifery roles there's now an increasing industry expectation for graduates with high-level research and evaluation skills. Honours offers you a competitive edge in the job market and is designed to provide you with the knowledge and research skills to undertake a postgraduate research degree, advanced professional training or to pursue diverse employment opportunities.

The School of Nursing and Midwifery offers research in areas influencing quality and patient safety in health care. These include: clinical risk and symptom management, chronic disease management, effective health delivery, health care ethics, decision making, aged care, midwifery and translational research.

Throughout this course you will gain a deep understanding of the philosophies, ethics and principles of health care research; knowledge of a range of research approaches; skills in data management, methods and tools for research practice; and skills in planning, implementing and reporting research studies.

This course will give you an understanding of how to develop a research proposal, from the identification of a research issue and literature review through to writing and submitting the proposal for approval by an ethics committee. You will undertake a research project and an individual research thesis in the area of nursing practice and develop evaluation and research skills in nursing practice and health service delivery.

You will be qualified for rewarding roles in all areas of nursing including acute care/sub-acute care, emergency, aged care, paediatrics and rehabilitation; in hospitals, government departments, district health services, the education sector, business and private industry. Alternatively, you may decide to undertake a research degree such as a research Masters or Doctor of Philosophy (PhD).

## Indicative student workload

You should be able to commit 35 hours a week to your honours degree.

## Professional recognition

Honours is not a professional accreditation requirement. Honours offers students a competitive edge in the job market and is designed to provide nurses with the knowledge and research skills to undertake a postgraduate research degree, advanced professional training or to pursue diverse employment opportunities.

## Career opportunities

After successfully completing the Bachelor of Nursing (Honours), you will be well prepared to build on your profile as a Registered Nurse, leading quality care initiatives and evidence based practice. You will have improved entry into a range of areas including quality management, policy, education, research and clinical practice.

## Participation requirements

Students will participate in online learning, intensive classroom activities, attend the Annual Research School and meet regularly with their supervisor.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit with a work integrated learning component, a community placement or interaction with the community may require a police check, working with children check or other check. Refer the relevant unit guide.

## Pathways

Students who achieve a high-grade Honours result can apply for credit for the research component if they decide to progress to a masters degree. A high-grade Honours result also gives students the option of applying for entry to a PhD program.

## Honours

For detailed information, particularly with respect to the selection of areas of study and availability of appropriate supervision, students should consult the School of Nursing and Midwifery.

## Inherent requirements

Essential knowledge, skills and capabilities are required to undertake and successfully complete the undergraduate nursing and midwifery courses and to practice safely as a registered nurse and/or midwife. The inherent requirements of the course are listed at School of Nursing and Midwifery Undergraduate Courses: Inherent requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply cognitive and technical skills combined with a systematic and coherent body of knowledge to develop a conceptual framework for research inquiry, select the appropriate methodology and procedures for the collection, analysis and interpretation of data; and disseminate research findings.
Communication	Autonomously communicate research outcomes to the professional community, defend and discuss all elements of the research project in the chosen field of study via oral and written means to academics, specialists and others.

Graduate learning outcomes	Course learning outcomes
Digital literacy	Autonomously undertake research, comprehend and evaluate new information, concepts and evidence to locate, select and collect appropriate technologies to source, interpret, adapt, collate, analyse and disseminate relevant information to an academic audience and specialists.
Critical thinking	Critically and constructively, evaluate, critique and synthesise the literature in the chosen field of study; select and apply appropriate methodological principles suitable for the research project; select and apply appropriate analytical techniques to test the hypothesis; and interpret, compare and contrast study findings to the wider literature in the chosen field of study.
Problem solving	Contribute to advancement of knowledge in the field of health care policy and delivery by identifying a suitable and novel research question based on the literature that can be completed within the given timeframe; conducting the research to address the question in an appropriate, realistic and ethical manner.
Self-management	Identify own learning needs and seek additional knowledge and/or information as required to produce a realistic timeline for the research project that incorporates preparing a literature review, obtaining ethical approval (if applicable), sourcing and/or collecting and analysing data, and disseminating research findings.
Teamwork	Collaborate effectively as a member of a research and professional team of specialists, peers, academics and others from a range of disciplines and backgrounds.
Global citizenship	Apply ethical standards governing research and professional practice in the discipline whilst maintaining confidentiality, and respecting inclusive, cultural sensitivities.

## Course rules

To complete the Bachelor of Nursing (Honours) students must attain 8 credit points, including two coursework units in research methods and research planning and two units comprising an independent research project.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

#### Full time enrolment – two trimesters:

##### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HBS400 Research Methods
- HNR412 Research Planning in Nursing

##### Trimester 2

- HNR410 Research Project 1
- HNR411 Research Project 2

## Part time enrolment – four trimesters (not available to international students):

Students may be able to complete in less than four trimesters – please contact your course enrolment officer.

### Year 1

#### Trimester 1

HBS400 Research Methods

#### Trimester 2

HNR412 Research Planning in Nursing

### Year 2

#### Trimester 1

HNR410 Research Project 1

#### Trimester 2

HNR411 Research Project 2

## Students commencing in Trimester 2 – part time only – four trimesters:

### Year 1

#### Trimester 2

HNR412 Research Planning in Nursing

### Year 2

#### Trimester 1

HBS400 Research Methods

#### Trimester 2

HNR411 Research Project 2

### Year 3

#### Trimester 1

HNR410 Research Project 1

## Work experience

The School of Nursing and Midwifery conducts its research through the Centre for Quality and Patient Safety Research (QPS). Collaborative research partnerships with health services facilitate knowledge translation particularly in relation to clinical care, quality and patient safety that directly impacts the quality, safety and experience of patient care.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing clinical placements.

## Other learning experiences

Attendance and presentation of work in progress at student workshops and Annual School of Nursing and Midwifery research school are strongly recommended.

## Research and research-related study

In the Bachelor of Nursing (Honours) the research and research related study activity comprises 50% (4CP) of the overall program. The research thesis is completed over two units of study.

# Bachelor of Exercise and Sport Science (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Exercise and Sport Science (Honours)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne), Waurin Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	062176G
<i>Deakin course code</i>	H442
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Advance your knowledge of exercise and sports science by undertaking an honours degree at Deakin.

Designed for students with a strong undergraduate academic record, the honours year combines coursework and an original piece of research under the guidance of a supervisor. You will gain an understanding of research methods and design as well as experience in project planning and implementation.

Graduates may apply to enter masters and PhD by research programs.

Examples of previous honours research pieces include:

- How does physical activity in childhood improve the adult heart?
- Can we monitor firefighters fatigue on the job in the same way we monitor our athletes?
- Influence of game characteristics on decision making in AFL umpires

## Indicative student workload

You should be able to commit 35 hours a week to your honours degree

## Professional recognition

Not applicable

## Career opportunities

The course provides four credit points of research training and four credit points of applied research project, therefore directly fostering the skills and capabilities required for progression to higher degrees by research and then to roles involving research in industry or academia. For students not wishing to pursue a research-focussed career pathway, the course equips them with research project management, problem solving, critical appraisal and high-quality communication skills to assist with employability in a range of health or other sectors.

## Participation requirements

Engagement with online course material and scheduled classes (on campus). Regular meeting with project supervisors. On campus participation in other course events as required.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course is a pathway into Higher Degrees by Research.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Acquire advanced knowledge of the philosophies, ethics, methods and principles of research in one or more discipline areas of practice in exercise and sports science. Apply this knowledge to plan and execute a substantial research project.
Communication	Demonstrate advanced oral and written communication skills in the clear and coherent communication of research questions, design and outcomes to a diverse audience.
Digital literacy	Acquire advanced skills in using digital technologies to research, analyse, synthesise and disseminate evidence-based information to an academic audience and specialists in the field of exercise and sports science. Use appropriate technologies to manage data and apply methodologies applicable for the exercise and sports sciences.
Critical thinking	Employ intellectual independence to critically analyse, evaluate and synthesise scientific literature and to apply appropriate methodologies and analytical techniques to answer the research question. Apply advanced theoretical knowledge to interpret outcomes and to identify how they contribute to advancing the field of exercise and sports science.
Problem solving	Identify an original research question and, under supervision, apply appropriate theories and methodologies to address this question in an ethical manner.
Self-management	Take initiative to identify personal learning goals and needs in order to undertake and manage an independent research project including the communication of research outcomes.
Teamwork	Contribute constructively and collaboratively as a member of research and professional team of specialists, peers, academics and others from a range of disciplines and backgrounds.
Global citizenship	Apply ethical standards governing research and professional practice in the field of exercise and sports science whilst maintaining confidentiality, and respecting inclusive, cultural sensitivities.

## Course rules

To complete the Bachelor of Exercise and Sport Science (Honours) students must attain 8 credit points, including two coursework units in research methods and research issues and an independent research project. Part-time students are required to complete the coursework components in their first year of study.

<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	022551J
<i>Deakin course code</i>	H451
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Gain insight into why people think, feel and behave the way they do. After a solid foundation in the elements of human behaviour, your Bachelor of Arts (Psychology) (Honours) year allows you to pursue a career as a psychologist and prepare yourself for postgraduate study.

Do you want to further your knowledge of human behaviour and begin a rewarding psychology career?

During your honours year you will get the chance to build on your undergraduate degree and learn an extended range of psychological assessment methods, as well as gain an understanding of the process of formulating psychological opinion in casework.

The research and analytical skills you develop will strengthen the quality of your research projects and become indispensable tools in your future career.

Upon graduating, you will be eligible to apply for provisional registration as a psychologist with the Psychology Board of Australia (PBA). If you would like to pursue full registration, you can go on to complete two years of relevant work under the supervision of a registered psychologist, or complete a master's or doctorate that includes work placement. Students wishing to become fully registered psychologists can then apply to continue their study by undertaking one of the following:

- Master of Psychology (Clinical)
- Master of Psychology (Organisational)
- Master of Professional Psychology
- Doctor of Psychology (Clinical).

## Indicative student workload

You should be able to commit 35 hours a week to your honours degree

## Professional recognition

This course is recognised for registration purposes by the Psychology Board of Australia (PBA) and is accredited by the Australian Psychology Accreditation Council (APAC). As a graduate, you will be eligible to apply for provisional registration as a psychologist and for entry into APAC accredited master's or doctoral-level training programs that lead to registration as a psychologist.

*Note: This course is currently accredited as at the date of publishing.*

## Career opportunities

Upon graduation, if you choose not to continue with further study in psychology, your possible career options include work in:

- hospitals and clinics
- mental health organisations
- community support services
- human resources
- marketing and social research
- corrective services
- policy development
- justice and advocacy systems.

If you choose to continue studying to pursue full registration as a psychologist, you may find employment in a variety of settings such as:

- clinical psychology
- forensic psychology
- organisational psychology
- education
- community and mental health organisations.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate understanding of advanced knowledge (theoretical, empirical and practical) in the areas of psychological assessment, counselling, advanced research methods and research practice.
Communication	Demonstrate clear written and oral communication skills in order to convey complex psychological knowledge and ideas to laypeople and professionals.
Digital literacy	Apply advanced skills to select appropriate digital tools to source, interpret, adapt, collate, analyse and disseminate discipline specific information in psychology to a variety of audiences relevant to pre-professional practice of psychology.

Graduate learning outcomes	Course learning outcomes
Critical thinking	Competence in the design and conduct of research, critically evaluate, synthesise and integrate complex scientific evidence, and apply this knowledge to assessment, counselling and case management that demonstrate evidence-based pre-professional practice in the field of psychology.
Problem solving	Respect and use critical and creative thinking, sceptical inquiry and the scientific approach to solve problems related to research and applied skills (psychological assessment, counselling and case-management) in the field of psychology.
Self-management	Display high level self-management through reflection, continual improvement and learning that reinforces the importance of responsibility and accountability for pre-professional development in the field of psychology.
Teamwork	Communicate effectively in a variety of formats and in a variety of contexts with diverse ethnic and cultural partners and teams.
Global citizenship	Demonstrate, report and apply ethical principles to understand how to work productively in the field of psychology within diverse social, cultural and environmental contexts by collaborating and communicating in a self-reflective and culturally sensitive manner.

## Course rules

To complete the Bachelor of Arts (Psychology) (Honours) students must attain 8 credit points.

Psychology Honours consists of two components: coursework and a thesis.

The coursework component (consisting of classes and seminars) contributes 50% to the final grade of Honours awarded. Part time students must complete the coursework component in the first year of their course. As required by the accreditation guidelines of the Australian Psychological Society, the coursework covers:

- research methods;
- issues in psychological assessment; and
- client-centred skills in practice

For further details of the coursework component, see the unit description for HPS431, HPS432, HPS433 and HPS434.

The thesis component (see HPS435 and HPS436) contributes 50% to the final grade of honours awarded. The thesis is a write-up of an individual research project based on an original piece of empirical research. A range of types of data (qualitative, quantitative, subjective, objective) and a range of data-collection settings and methodologies can be used as the basis of the thesis component.

The thesis is submitted in two parts:

- a 1500-word research proposal submitted mid-year and
- a 5000-word report on the empirical component submitted in October.

The literature review and empirical report section of the thesis typically contribute 30% and 70% respectively to the final mark for the thesis component.

Attendance and presentation at the annual School Fourth Year Conference is a hurdle requirement. Students enrolled in the CLOUD online mode have the option to attend or undertake an alternative assessment.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

#### Trimester 1

HAI010	Academic Integrity (0 credit points)
HPS431	Psychological Assessment
HPS432	Research Methods in Psychology C
HPS435	Research Project A

#### Trimester 2

HPS433	Client-Centred Skills in Practice
HPS434	Research Methods in Psychology D
HPS436	Research Project B

## Work experience

Not applicable

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

The thesis component (see HPS427 and HPS428) contributes 50% to the final grade of honours awarded, and these units are 2 credit points each.

The thesis is submitted in two parts:

- a 4000-word literature review submitted mid-year and
- a 5000-word report on the empirical component submitted in October.

The literature review and empirical report section of the thesis typically contribute 15% and 35% respectively to the final mark for the thesis component.

Problem solving	Respect and use critical and creative thinking, sceptical inquiry and the scientific approach to solve problems related to research and applied skills (psychological assessment, counselling and case-management) in the field of psychology.
Self-management	Display high level self-management through reflection, continual improvement and learning that reinforces the importance of responsibility and accountability for pre-professional development in the field of psychology.
Teamwork	Communicate effectively in a variety of formats and in a variety of contexts with diverse ethnic and cultural partners and teams.
Global citizenship	Demonstrate, report and apply ethical principles to understand how to work productively in the field of psychology within diverse social, cultural and environmental contexts by collaborating and communicating in a self-reflective and culturally sensitive manner.

## Course rules

To complete the Bachelor of Psychological Science (Honours) students must attain 8 credit points.

Psychology Honours consists of two components: coursework and a thesis.

The coursework component (consisting of classes and seminars) contributes 50% to the final grade of Honours awarded. Part time students must complete the coursework component in the first year of their course. As required by the accreditation guidelines of the Australian Psychological Society, the coursework covers:

- research methods;
- issues in psychological assessment; and
- client-centred skills in practice

For further details of the coursework component, see the unit description for HPS431, HPS432, HPS433 and HPS434.

The thesis component (see HPS435 and HPS436) contributes 50% to the final grade of honours awarded. The thesis is a write-up of an individual research project based on an original piece of empirical research. A range of types of data (qualitative, quantitative, subjective, objective) and a range of data-collection settings and methodologies can be used as the basis of the thesis component.

The thesis is submitted in two parts:

- a 1500-word research proposal submitted mid-year and
- a 5000-word report on the empirical component submitted in October.

The literature review and empirical report section of the thesis typically contribute 30% and 70% respectively to the final mark for the thesis component.

Attendance and presentation at the annual School Fourth Year Conference is a hurdle requirement. Students enrolled in the CLOUD online mode have the option to attend or undertake an alternative assessment.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

#### Trimester 1

HAI010	Academic Integrity (0 credit points)
HPS431	Psychological Assessment
HPS432	Research Methods in Psychology C
HPS435	Research Project A

#### Trimester 2

HPS433	Client-Centred Skills in Practice
HPS434	Research Methods in Psychology D
HPS436	Research Project B

## Work experience

Not applicable

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

The thesis component (see HPS427 and HPS428) contributes 50% to the final grade of honours awarded. And these units are 2CP each.

The thesis is submitted in two parts:

- a 4000-word literature review submitted mid-year and
- a 5000-word report on the empirical component submitted in October.

The literature review and empirical report section of the thesis typically contribute 15% and 35% respectively to the final mark for the thesis component.

# Graduate Certificate of Health Economics

<i>Year</i>	2019
<i>Award granted</i>	Graduate Certificate of Health Economics
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>Deakin course code</i>	H504
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Certificate of Health Economics gives graduates from a range of disciplines such as nursing and pharmacy through to business administration and health management and beyond, a foundation in health economics. It introduces microeconomic concepts relevant to health and economic evaluation to understand the complexities of resource allocation in the health system. Students will learn skills in economic evaluation of health interventions, resource allocation and priority setting.

As a graduate, students will be able to evaluate current research in economic evaluation of health services as well as participate effectively in health policy development and debate. In addition to numerous career opportunities, students will have the opportunity to progress to a Master of Health Economics at Deakin University.

## Indicative student workload

150 hours of learning and assessment activities per Deakin credit point (as per AQF Explanation)

Full time study in this course is equivalent to a full time work commitment. Successful students typically spend about 150 hours in learning and assessment for each one credit point unit.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check at the comm or other check. Refer the relevant unit guide.

## Pathways

Pathways for credit are available for this course to the Master of Health Economics (H704).

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

Students must complete 4 credit points of study.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSH717 Health Economics 1
- HSH719 Economic Evaluation 1

#### Trimester 2

- HSH762 Resource Allocation and Priority Setting

Plus one elective unit from the following list:

- HSH764 Economic Evaluation – Theory and Practice
- HSH768 Health Economics in a Global Context
- MPE781 Economics for Managers

# Graduate Certificate of Therapeutic Child Play

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Therapeutic Child Play
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Cloud (online). There may be on campus intensives offered.
<i>Cloud Campus</i>	Yes
<i>Duration</i>	0.5 years fulltime
<i>Deakin course code</i>	H505
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Enhance your ability to work with children and adolescents.

Whether you work with children in the educational, medical, or allied health professions, you will benefit from learning the latest research behind children's development of play skills. Explore the important role that play has in the lives of children, and learn the skills necessary to assess children's play behaviour.

From the fundamentals of attachment theory to the therapeutic powers of play, the Graduate Certificate of Therapeutic Child Play gives you a strong insight into effective ways to implement play into your work with children.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 8–10 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

The Master course H705 Master of Child Play Therapy leads to professional recognition. This Graduate Certificate is a skills enhancement program that supports practitioners to engage new learning and enhance their existing skills.

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the relevant professional body retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Career opportunities

Graduates will be eligible to work in professional healthcare teams, in individual private practice, and in a range of health, education and community contexts.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

## Pathways

This course provides a pathway to other postgraduate coursework programs.

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply specialised theory and practical knowledge associated with child development, measurement of play ability and the impact of life events such as trauma on children's development in the context of therapeutic child play.
Communication	Demonstrate the verbal, written and interpersonal communication skills to work with children and their carers appropriate to therapeutic child play to a variety of audiences.
Digital literacy	Use appropriate technologies to find, use and disseminate discipline-specific information to a variety of audiences
Critical thinking	Critically evaluate and synthesise concepts and theories in therapeutic child play.
Problem solving	Apply knowledge and skills to measure and assess children to determine the need for therapeutic intervention and refer to a Child Play Therapist or other Practitioner to solve a range of problems.
Self-management	Demonstrate personal autonomy and professional judgement in the field of therapeutic child play showing responsibility and accountability, in conjunction with reflective and ethical practice.
Teamwork	Establish and maintain collaborative professional relationships, demonstrating responsibility and accountability to the child, family and carers.
Global citizenship	Demonstrate professional and ethical practice and respect for diverse social, cultural and environmental contexts that may impact children and families.

## Course rules

To complete the Graduate Certificate of Therapeutic Child Play students must attain 4 credit points. All four 1-credit-point units are core units (these are compulsory).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Trimester 1

HAI010	Academic Integrity (0 credit points)
HSO710	Foundations of Play Therapy
HSO711	Child Attachment Environment and Trauma
HSO713	Assessment and Measurement in Play Abilities
HSO715	Childhood Developmental Neuroscience and Psychopathology

## Work experience

The course includes a mandatory 1 credit point unit (HSO710), that requires students to undertake at least 6 hours of suitable practical experience. This experience may be in an early childhood setting, home environment or public area, where the student will be exposed to professional e.g. child play and family interactions and associates carrying out their duties.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Applied Sport Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Applied Sport Science
<i>Campus</i>	This course is only offered in Cloud (online) mode with on campus intensives
<i>Deakin course code</i>	H507
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point only from H707 Master of Applied Sport Science*

## Course overview

The Graduate Certificate in Applied Sport Science is designed as an exit point option from the Master of Applied Sport Science. The Graduate Certificate requires the student to undertake two core units in high performance management in sport and a two unit elective stream in either strength and conditioning, sport performance analysis or scientific methods and design for sport scientists. The core units plus the elective stream will prepare the student to work in specific areas of the sport science industry.

## Indicative student workload

As a student in a Cloud (online) course (with on-campus intensives in some units) in the Faculty of Health you will be expected to spend at least 11–13 hours per unit every week participating in a range of teaching activities each week. This could include classes, seminars, practicals, placements and online interaction via CloudDeakin. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time. Teaching, placements and assessment tasks may take place outside of Deakin University teaching periods.

The core units and the strength and conditioning stream both require attendance at a 5 day practical intensive in Trimester 1 and Trimester 3.

## Pathways

Depending on the elective stream chosen and other professional accreditation, graduates could work as a strength and conditioning coach, sport performance analyst, a sport scientist or sport performance manager.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

Students can exit with the Graduate Certificate of Applied Sport Science which consist of 2 core units and 2 elective units.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

- HAI010 Academic Integrity (0 credit points)  
HSE720 Athlete and Program Development in High Performance Sport  
HSE721 High Performance Management in Sport

and 2 elective units, either:

- HSE724 Strength and Conditioning Methods for Athletes  
and  
HSE725 Factors Influencing Training Design for Sport

OR

- HSE726 Sport Performance Analysis  
and  
HSE727 Advanced Sport Performance Analysis

OR

- HSE722 The Scientific Process for Sports Scientists  
and  
HSE723 Data Analysis and Program Evaluation for Sports Scientists

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Disability and Inclusion

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Disability and Inclusion
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year part time
<i>Deakin course code</i>	H508
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Deakin's Graduate Certificate of Disability and Inclusion equips students with the academic knowledge they need to pursue professional work in the disability, health, and community sectors.

The course will help you to form a distinctive and contemporary understanding of disability. Drawing on research informed by disability and inclusion theory and practice, the Graduate Certificate of Disability and Inclusion also gives you the opportunity to learn from the lived experience of people with disability.

This graduate certificate comprises four core single credit point units, and is designed to meet specialist education and training needs in the disability, human service and community workforce both locally and nationally. Graduates of this course are ideally placed to take advantage of the growth opportunities in these sectors as the National Disability Insurance Scheme is rolled out across Australia in 2016.

Our Master (/Graduate Certificate) of Disability and Inclusion has strong links to industry, facilitated by our thought-leading Disability and Inclusion Advisory Board made up of prominent industry leaders and Deakin academics.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 8–10 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

Not applicable

## Career opportunities

The Graduate Certificate of Disability and Inclusion is designed to meet specialist education and training needs in the disability, human service and community workforce locally and nationally, in particular in relation to the national roll out of the National Disability Insurance Scheme in Australia from 2016.

## Participation requirements

Not applicable

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply advanced knowledge and skills in the area of Disability and Inclusion that includes theories of disability and social inclusion, including barriers and enablers to inclusion and the key conceptual models and policy underpinning inclusion of people with disability.
Communication	Communicate on disability and inclusion issues (e.g. barriers, enablers, policies) in an effective and coherent manner being mindful of the target audience.
Digital literacy	Apply current technologies and demonstrate digital literacies applicable to disability and inclusion; and utilise a range of digital technologies and sources to find, select, use and disseminate relevant information.
Critical thinking	Critically analyse information drawn from a variety of sources about barriers and enablers to inclusion, disability and inclusion theory, policy and practice.
Problem solving	Analyse real-world issues relating to disability and inclusion to assess key barriers, and identify innovative and evidence based effective approaches to enabling inclusion for people with disability.
Self-management	Work and learn through independent and self-directed initiatives, reflecting on learning and apply new knowledge and skills in Disability and Inclusion.
Teamwork	Demonstrate effective teamwork skills to enable inclusion for people with disability.
Global citizenship	Recognise and apply ethical approaches to disability research and practice, and show awareness and respect for diversity in line with contemporary human rights obligations.

## Course rules

To complete the Graduate Certificate of Disability and Inclusion students must attain 4 credit points. All four 1-credit-point units are core units (these are compulsory).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HDS730 Disability and Inclusion: Contemporary Theory and Lived Experience
- HDS731 Planning for Inclusion Across the Life Course

#### Trimester 2

- HDS732 Determinants of Health and Wellbeing in the Lives of People with Disability
- HDS733 Community Capacity Building – Theory and Practice for Inclusion

## Work experience

Not applicable

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Human Nutrition

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Human Nutrition
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year, please refer to course structure below
<i>Deakin course code</i>	H511
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Learn about nutrition across many interesting contexts from metabolic studies and food science to social and behavioural nutrition.

This course allows you to explore areas such as nutritional physiology and biochemistry, nutritional requirements, food composition, and the social, cultural and economic aspects of nutrition.

Designed as a postgraduate introduction to nutrition, this course draws from related disciplines such as food science, biochemistry, physiology, epidemiology, psychology and sociology.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

Growing public interest in the relationship between diet and health is evident and, as a result, there are increasing demands from the public for reliable and trustworthy information. In response, the Nutrition Society of Australia (NSA) has developed a 'Register of Nutritionists' to establish a list of appropriately qualified nutrition professionals.

As a graduate of this course, you may be eligible for registration as an 'Associate Nutritionist'. Following three years of relevant work experience, Associate Nutritionists are able to apply for 'Registered Nutritionist' status. Registration with NSA does not authorise registrants to obtain provider numbers with Medicare or Private Health Insurers. Please refer to the Nutrition Society of Australia website for further information or queries about registration.

## Career opportunities

Graduates will be equipped to find careers as a nutritionist, but many roles may require an undergraduate science/health degree or some further postgraduate studies to ensure a broader knowledge and skill base.

Graduates can expect to gain employment in a wide range of organisations such as community organisations dealing with food and nutrition issues, food industry, media and communications.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course can be a pathway to:

- H517 Graduate Certificate of Public Health Nutrition
- H616 Graduate Diploma of Human Nutrition
- H714 Master of Human Nutrition

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply key principles, concepts and evidence-based knowledge of nutrition and health to nutrition related health problems.
Communication	Select and use appropriate modes of communication to obtain and share evidence based nutrition knowledge.
Digital literacy	Select and use appropriate technologies to analyse and interpret nutrition information, and to share knowledge, skills and ideas.
Critical thinking	Analyse and synthesise information and problems in nutrition, to inform high level independent judgements.
Problem solving	Apply best practice and evidence to identify problems and generate practical solutions to a range of nutrition issues.
Self-management	Employ personal accountability and demonstrate effective work practices, responsible judgement, adaptability to new situations and responsibility as a nutritionist.
Teamwork	Establish, contribute and maintain a key role in relationships with a range of stakeholders to achieve successful outcomes to advance nutrition sciences.
Global citizenship	Engage in professional and ethical practice that demonstrates a high level of personal autonomy, within diverse contexts in nutrition sciences.

## Course rules

To complete the Graduate Certificate of Human Nutrition students must attain 4 credit points comprising 3 1-credit-point core units (these are compulsory) and 1 credit point elective unit.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

Course structure applies for students who commenced in 2019 onwards. Students who commenced prior to 2019 should refer to previous online Handbooks or consult your course enrolment officer.

Students must enrol in the Cloud offerings of all units.

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSN701 Principles of Nutrition (also available in Trimester 3)
- HSN749 Biochemistry and Physiology for Human Nutrition

#### Trimester 2

- HSN702 Lifespan Nutrition

plus one elective

### Elective units

#### Trimester 1

- HSN703 Diet and Disease
- HSN705 Public Health Nutrition
- HSN708 Nutrition Promotion
- HSN713 Food, Nutrition and Behaviour

#### Trimester 2

- HSN706 Food Policy and Public Health
- HSN709 Sports Nutrition
- HSN715 Understanding Human Nutrition Research Studies
- HSN734 Obesity Prevention
- HSN735 Essentials of Food Science
- HSN746 Nutritional Issues from Early Childhood to Adolescence

#### Trimester 3

- HSN738 International Nutrition
- HSN743 Nutrition for Healthy Ageing

## Work experience

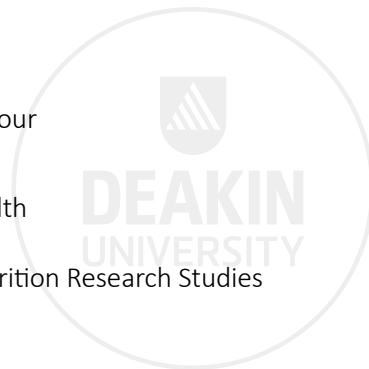

Work Integrated Learning principles are embedded within all units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

A 1 credit point elective unit “International Perspectives in Nutrition” which features a 2 week study tour is available to all students every second year.

# Graduate Certificate of Health Promotion

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Health Promotion
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year part time
<i>Deakin course code</i>	H515
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Encourage people to take control of their health and improve their wellbeing.

More and more workplaces are incorporating health promotion activities into their cultures. With our Graduate Certificate of Health Promotion, you will learn about current and emerging health issues in local and global contexts.

Armed with health education knowledge and principles, you will inspire others to adopt healthier lifestyles.

You will also study the practical skills required in health promotion practice, such as undertaking needs assessments, program planning and evaluation.

The Graduate Certificate of Health Promotion is incredibly useful for those looking to enter the health sector, as well as those already working in the sector who'd like to pursue management roles.

Students completing this course can also move into a higher award, such as the Graduate Diploma (H615) or Master of Public Health (H759).

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and on-line interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Graduates in this course should be eligible to apply for membership of the Australian Health Promotion Association and the International Union of Health Promotion and Education.

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the relevant professional body retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Career opportunities

Following successful completion of the Graduate Certificate of Health Promotion, you will be qualified to take advantage of the career opportunities that exist world wide in national and international health organisations; medium-sized businesses; multinational corporations; community organisations; human services agencies; local, state and federal government departments; statutory authorities; and Non-Government Organisations (NGOs).

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Apply knowledge in the area of health promotion that includes:</p> <ul style="list-style-type: none"> <li>theories of behaviour change, inequalities and inequities in health including the concept of the social gradient and relevance to practice, the action areas for health promotion, as well as the determinants of health.</li> <li>the behavioural and socio-environmental models of health and their relevance to health promotion practice in general and needs assessment in particular.</li> <li>stages of program planning, implementation, evaluation and sustainability.</li> </ul>
Communication	<p>Communicate on health promotion issues in an effective and coherent manner and mindful of the target audience.</p> <p>Articulate the various ways in which health promotion practice is influenced.</p>
Digital literacy	<p>Demonstrate understanding of current technologies and digital literacies applicable to health promotion.</p> <p>Utilise a range of digital technologies and information sources to discover, select, analyse, employ, evaluate, and disseminate both technical and non-technical information</p>
Critical thinking	<p>Demonstrate critical thinking in evaluating solutions to health promotion problems.</p> <p>Access and critically analyse information drawn from a variety of sources.</p>
Problem solving	<p>Use knowledge to understand and interpret real-world and ill-defined problems and develop innovative health promotion solutions with creativity.</p> <p>Analyse and develop strategies to promote health. Assess the health status of communities and evaluate intervention processes and outcomes using appropriate analytical and research methods.</p>
Self-management	<p>Apply knowledge and skills in creative ways to new situations in professional practice and/or further learning in the field of health promotion with adaptability, autonomy, responsibility and personal accountability for actions as a practitioner and a learner.</p>

Graduate learning outcomes	Course learning outcomes
Teamwork	Apply teamwork, leadership and management skills and principles to work effectively in a team environment and with others from a range of disciplines and backgrounds.
Global citizenship	Apply the highest ethical standards in the development, design, construction and management of health promotion programs and activities.

## Course rules

To complete the Graduate Certificate of Health Promotion students must attain 4 credit points. All four 1-credit-point units are core units (these are compulsory).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Trimester 1

HAI010 Academic Integrity (0 credit points)  
 HSH703 Health Promotion  
 HSH704 Health Communication

#### Trimester 2

HSH705 Needs Assessment and Health Program Planning  
 HSH745 Health Program Evaluation

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Public Health Nutrition

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Public Health Nutrition
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Cloud Campus</i>	Yes
<i>Duration</i>	Students commencing in Trimester 1: 1 year part time. Students commencing in Trimester 2: 1.5 years part time.
<i>Deakin course code</i>	H517
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Learn about a population approach to promoting health and preventing diet related disease.

You will develop an understanding of a systems approach to dealing with diet-related disease, including over and under nutrition; the social and political elements of food policy; and food security and environmental sustainability.

By studying disciplines such as politics and policy as well as public health and nutrition promotion, this practically-oriented course will give you the core skills to tackle important public health and nutrition issues.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

As a graduate of this course, you may be eligible for registration as an 'Associate Nutritionist'. Following three years of relevant work experience, Associate Nutritionists are able to apply for 'Registered Public Health Nutritionist' status. Registration with NSA does not authorise registrants to obtain provider numbers with Medicare or Private Health Insurers. Please refer to the Nutrition Society of Australia website for further information or queries about registration

## Career opportunities

A career in public health nutrition addresses factors affecting the protection and promotion of public health and nutritional health today, and into the future. As a graduate you may deal with the epidemic of diet-related disease, including obesity; socio-economic considerations such as rising food prices and food security; and environmental sustainability in relation to the food system.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course can be a pathway to:

- H714 Master of Human Nutrition
- H757 Master of Public Health

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply key principles, concepts, evidence-based knowledge and skills in public health nutrition to complex public health nutrition problems.
Communication	Select and use appropriate modes of communication to obtain and share evidence based public health nutrition knowledge.
Digital literacy	Select and use appropriate technologies to locate and evaluate public health nutrition information, and to interpret and share knowledge, skills and ideas.
Critical thinking	Critically analyse, reflect on and synthesise information and problems in public health nutrition, to inform high level independent judgements.
Problem solving	Apply best practice and evidence to identify problems and generate and evaluate practical solutions to a range of public health nutrition issues.
Self-management	Employ reflective practice and high level personal responsibility and autonomy to demonstrate reasonable judgement, adaptability to new situations, effective work practices, and accountability as a public health nutritionist.
Teamwork	Establish, contribute and maintain a key role in relationships with a range of stakeholders to achieve successful outcomes to advance public health nutrition.
Global citizenship	Engage in professional and ethical practice within diverse contexts relevant to public health nutrition.

## Course rules

To complete the Graduate Certificate of Public Health Nutrition students must attain 4 credit points. All four 1-credit-point units are core units (these are compulsory).

For students completing both a postgraduate human nutrition course (H511 or H714) and the Graduate Certificate of Public Health Nutrition (H517), a maximum of 2 credit points of Recognition of Prior Learning can be shared between both awards.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

Course structure applies to students commencing in 2016 onwards. Students who commenced before 2016 should consult your course enrolment officer on email [ens-equire@deakin.edu.au](mailto:ens-equire@deakin.edu.au).

#### Trimester 1

HAI010	Academic Integrity (0 credit points)
HSN705	Public Health Nutrition
HSN708	Nutrition Promotion

#### Trimester 2

HSN706	Food Policy and Public Health
HSN714	Systems Thinking in Public Health Nutrition

## Work experience

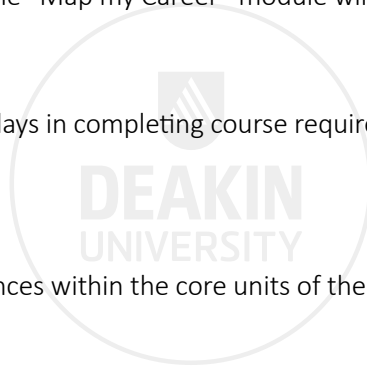

Work Integrated Learning principles are embedded within all units. A Post Graduate Student Practicum unit is also available for students to elect to undertake. Specifically designed Careers modules are available on the Course specific cloud Deakin site and the “Map my Career” module will also be available in 2018.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

There are no optional learning experiences within the core units of the course.

# Graduate Certificate of Diabetes Education

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Diabetes Education
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year part time
<i>Deakin course code</i>	H520
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Diabetes is recognised as the world's fastest growing chronic condition. Over the past 30 years the global prevalence of diabetes among adults has almost doubled.

This course prepares health professionals with specialist knowledge and skills to practise in the area of diabetes education.

You will learn about the physiology and pathology of the condition, the social and psychological effects, as well as techniques for effective prevention and management to reduce the impact of this chronic on individuals, carers and communities.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 8–10 hours every week studying, undertaking various learning tasks, interacting with others and completing assessment tasks for each unit in your course. An optional three-day workshop at Burwood (Melbourne) is scheduled during Trimester 2.

## Professional recognition

This course is accredited by the Australian Diabetes Educators Association (ADEA). Australian students may be eligible to seek registration as a Credentialed Diabetes Educator with ADEA, subsequent to completing additional requirements. International students are advised to refer to the professional bodies in their home country and are not able to seek credentialing with the ADEA or undertake clinical placement in Australia.

## Career opportunities

Upon completion of the Graduate Certificate of Diabetes Education, you may wish to look for further study options or seek accreditation with the ADEA to become a Credentialed Diabetes Educator (CDE). Diabetes education professionals practise in a range of health care settings, including primary and acute care, community-based organisations, public and private practice and aged care.

## Participation requirements

The units of the Graduate Certificate of Diabetes Education are delivered online. A three day on-campus workshop is optional. Students seeking credentialing with the ADEA must complete a 40-hour clinical placement while enrolled in the course.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. [deakin.edu.au/students/health-and-wellbeing/disability-support](http://deakin.edu.au/students/health-and-wellbeing/disability-support)

## Mandatory student checks

Students undertaking clinical placement may require a police check, working with children check and evidence of immunisations.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs. Students may elect to apply and request credit transfer for their studies into a Graduate Diploma or Masters in their relevant professional areas, providing the entry criteria are met.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply diabetes-specific knowledge and understanding of evidence-based practice that comply with organisational, legal and business requirements by evaluation and interpretation of literature to manage acute and long term complications.
Communication	<p>Communicate complex knowledge and ideas to clients and their families, health professionals, and the wider diabetes community in varied contexts, demonstrating well developed judgment, adaptability, accountability and responsibility.</p> <p>Demonstrate advanced understanding of principles of person-centred care by communicating with clients and their families, health professionals and the wider diabetes community with empathy, and using appropriate language and methods, in a manner that promotes active engagement and supports self-management.</p>
Digital literacy	Evaluate information using digital technologies to effectively disseminate relevant information to professional networks, clients and communities.
Critical thinking	Critically identify, analyse, evaluate and apply research knowledge and skills for all aspects of diabetes care.
Problem solving	Apply best practice and respond effectively by using a well-developed diabetes education plan within an evidence-based framework.
Self-management	Apply knowledge and skills to demonstrate autonomy, well-developed judgement, adaptability and responsibility as a learner and diabetes educator within their scope of practice.
Teamwork	Apply the principles of collaborative, interdisciplinary practice and for working in partnership with health professionals and clients to develop mutually agreeable diabetes care plans.
Global citizenship	Advocate for equitable access for all people affected by diabetes to best practice diabetes education and care services in a cultural diverse and global context.

## Course rules

To complete the Graduate Certificate of Diabetes Education students must attain 4 credit points.

All four 1-credit-point units are core units (these are compulsory).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

Each unit below is delivered online via FutureLearn, allowing you the freedom to fit learning around your work, family and lifestyle. These units are broken down into five, easily-manageable two-week blocks and takes approximately 10 weeks to complete in addition to assessment tasks

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HND701 Pathophysiology of Diabetes
- HND732 Diabetes in Social and Psychological Contexts

#### Trimester 2

- HND702 Management of Diabetes
- HND731 Learning and Teaching for Health Professionals

## Work experience

Australian students seeking ADEA credentialing must successfully complete a 40 hour clinical practicum (while enrolled in the course), organised by academic staff.

International students are advised to refer to the professional bodies in their home country and are not able to seek credentialing with the ADEA or undertake clinical placement in Australia.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing clinical placements.

# Graduate Certificate of Agricultural Health and Medicine

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Agricultural Health and Medicine
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Cloud (online). Some attendance is required at the National Centre for Farmer Health, Deakin centre, affiliated industry or other physical site.
<i>Cloud Campus</i>	Yes
<i>Duration</i>	Students are likely to undertake the GCAHM on a part-time basis over Trimesters 1 and 2 with the option of concluding elective units in Trimester 3. One core unit will run on campus in block mode – please refer to individual unit handbook entries for further details.
<i>Deakin course code</i>	H522
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*Some attendance is required at the National Centre for Farmer Health, Deakin centre, affiliated industry or other physical site.*

## Course overview

Improve the social, physical and mental health of agricultural communities across Australia with our Graduate Certificate of Agricultural Health and Medicine.

This course aims to allow students an insight into the physical and mental health issues encountered by people within the agricultural industry. You will explore what influences higher rates of morbidity and mortality in rural and remote Australia, and what influences successful health policies and safety intervention programs.

By understanding these issues, along with learning the impact of poor health on agribusiness, agricultural production and sustainability, you will be placed to make a significant difference in Australia's agricultural communities.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 8–10 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course. You will also be expected to attend the National Centre for Farmer Health, Deakin centre, affiliated industry or other physical site – see individual unit descriptions for full details.

## Professional recognition

The course is recognised by AgriSafe™ Australia and enables clinically trained graduates to become an AgriSafe™ practitioner. The course is accredited to offer continuing education and professional development points through a number of professional colleges and associations, including the Australian College of Rural and Remote Medicine, the Australian Association of Social Workers, the Australian Veterinary Association, and the Royal Australian College of General Practitioners.

*Note: This course is currently accredited as at the date of publishing. The eligibility of students to be recognised as an AgriSafe™ practitioner is subject to meeting the requirements of AgriSafe™ Deakin University makes no representation that students will meet those requirements.*

## Career opportunities

The Graduate Certificate of Agricultural Health and Medicine (GCAHM) opens a variety of exciting career paths by providing students with a strong foundation in agricultural health, safety, wellbeing and sustainability. After successful completion of this course you will have the academic, practical and research skills to work in a range of career paths spanning health service provision, rural research, health management, health promotion, agricultural productivity, sustainability and rural policy. The GCAHM provides an important opportunity to those who are currently, or plan to be, rural and remote professionals in the fields of medicine, nursing, health, health management, rural policy, WH&S and agriculture.

## Participation requirements

Compulsory attendance is required at a 5-day intensive workshop.

International students studying through the Cloud Campus may not be granted a visitor visa to complete mandatory onsite components of the course.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course provides a pathway to further postgraduate coursework programs.

## Research information

Students may undertake a research stream consisting of two units, HSH731 Minor Project A and HSH732 Minor Project B, covering research integrity specifically. The units enable students to improve their knowledge and skills in research planning, conduct, and presentation of findings relative to public health. Students conduct research-based tasks and make a significant contribution to a research-based project in their relevant field of study.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply the general principles of agricultural health and medicine in the professional environment.
Communication	Demonstrate verbal, written and interpersonal communication skills using discipline-specific language and lay-terms necessary to explain and justify decisions to consumers, communities and professional colleagues.
Digital literacy	Demonstrate knowledge and skills regarding the latest technological developments including social media; and select and use appropriate technologies to conduct research; and provide information to people in agricultural settings.
Critical thinking	Critically evaluate policy, promotional and scholarly materials, research data, and farming environments; to make recommendations to influence and/or improve the health, wellbeing and safety of Australian agricultural communities.
Problem solving	Display flexibility and independence in applying an advanced body of knowledge, within the field of agricultural health and medicine, to solve problems regarding health, wellbeing and safety within agricultural communities.
Self-management	Establish and maintain a lifelong commitment to applying research knowledge and principles in an evidence-based collaborative approach to agricultural health and medicine, demonstrated through reflective practice and leadership.
Teamwork	Establish and maintain collaborative, professional and respectful relationships when working in a team to achieve a common goal and take a leadership role when appropriate.
Global citizenship	Apply knowledge of cultural, social and broader international matters in the field of agricultural health and medicine and act in a responsive manner to regional and rural issues.

## Course rules

To complete the Graduate Certificate of Agricultural Health and Medicine students must attain 4 credit points, of which 2 credit points must be the core units HMF701 Agricultural Health and Medicine and HMF702 Healthy and Sustainable Agricultural Communities.

The course structure is highly flexible and permits you to commence your studies with either HMF701 in Trimester 1 or HMF702 in Trimester 2 and then to complete either a 2 credit point minor research project or alternatively undertake 2 credit points from the course-grouped electives in the coursework stream.

If you are undertaking the coursework stream you will have the flexibility to choose any combination of the 6 listed elective units or alternatively you may choose unlisted 700-level units provided the units are relevant to the field of Agricultural Health and Medicine and you have written approval from your course director.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

- HAI010 Academic Integrity (0 credit points)
- HMF701 Agricultural Health and Medicine
- HMF702 Healthy and Sustainable Agricultural Communities

### Coursework stream

2 credit points from:

#### Public Health electives

- HSH701 Principles and Practice of Public Health
- HSH702 Contemporary Health Issues and Policies

#### Health Promotion electives

- HSH703 Health Promotion
- HSH704 Health Communication

#### Nursing elective

- HNN715 Leadership and Management in Nursing

### Research stream

- HSH731 Minor Project A
- HSH732 Minor Project B

### Work experience

Not applicable

## Enrolment and visa requirements

All places offered to International students in this course are offered as off campus students. Deakin University is making no undertaking that an offer of on campus study may be made in the future. Should students wish to change to on campus mode in the future, they will be assessed in accordance with Deakin University admission guidelines at that time. Deakin University is not obligated to provide any students with a COE (confirmation of enrolment) to facilitate a student visa application.

Deakin University offers many off campus units which may include a compulsory on campus component or residential. It is the student's responsibility to ensure that they understand the visa options available to them to allow for them to be in Australia and on campus to complete these requirements.

This program includes a compulsory week long on-campus intensive component held at a Deakin University campus. Students are required to obtain a visitor visa to undertake these compulsory intensive classes. Students are unable to apply for a student visa for this course.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

Students will have the flexibility to undertake elective units outside of the nominated course-grouped electives provided it is relevant to the field of Agricultural Health and Medicine and they have attained written approval from the course chair.

# Graduate Certificate of Health Research Practice

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Health Research Practice
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year part time
<i>Deakin course code</i>	H541
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

This course provides students with the necessary skills and knowledge to advance their professional training in research and satisfies some of the research training requirements to enable students to undertake higher degree studies (PhD).

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health, you will be expected to spend 300 hours over the trimester studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

This course provides students with the necessary skills and knowledge to advance their professional training in research and satisfies some of the research training requirements to enable students to undertake higher degree studies (PhD). As such there is no further professional recognition beyond that provided by the student's undergraduate degree.

## Career opportunities

A graduate from this course will have the necessary skills to undertake research project management and work in the research field in areas such as universities, government and non-government organisations.

## Participation requirements

Not applicable. Reasonable adjustments to participation and other course requirements will be made for students with a disability.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course satisfies some of the research training requirements for undertaking higher degree by research courses and other postgraduate coursework programs.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Apply advanced cognitive and technical skills to develop a deep understanding of the philosophies, ethics and principles of research in one or more discipline areas of practice in nutrition, exercise or health.</p> <p>Under supervision, identify an original research question; select the appropriate methodological procedures for the collection, analysis and interpretation of data; and disseminate research findings to advance knowledge in nutrition, exercise or health</p>
Communication	<p>With minimal direction, clearly and accurately communicate research proposals and outcomes, defend and discuss all elements of the research project in the chosen field of study in nutrition, exercise and health to academics, specialists and others.</p>
Digital literacy	<p>With minimal supervision, select and use appropriate technologies to source, interpret, adapt, collate, analyse and disseminate evidence-based information to an academic audience and specialists in the field of nutrition, exercise or health.</p> <p>With minimal supervision, select and use appropriate technologies to manage data and apply data analysis methodologies appropriate for nutrition, exercise or health sciences.</p>
Critical thinking	<p>Autonomously and critically review, interpret and synthesise scientific literature in the chosen field of study in nutrition, exercise or health; select and apply appropriate methodological principles suitable for the research project.</p> <p>Select and apply appropriate analytical techniques to test the hypothesis; and interpret the findings and their contribution to advancing knowledge in the chosen field of study.</p>
Problem solving	<p>Under supervision, identify an original and worthwhile research question based on the literature in the chosen field of study that can be completed within the timeframe.</p> <p>Conduct an investigation to address the research question in an appropriate, realistic and ethical manner, and contribute to advancement of knowledge in the field of nutrition, exercise or health by the appropriate dissemination of the research findings.</p>
Self-management	<p>Use self-assessment to identify personal learning goals and needs to create a realistic project management plan and timeline that incorporates the literature review, obtaining ethical approval (if applicable), sourcing and/or collecting and analysing data, and dissemination of the findings.</p>

Graduate learning outcomes	Course learning outcomes
Teamwork	Contribute constructively and collaboratively as a member of research team of specialists from a range of disciplines and backgrounds.
Global citizenship	Apply ethical standards governing research and professional practice in the field of nutrition, exercise or health whilst maintaining confidentiality, and respecting inclusive, cultural sensitivities.

## Course rules

To complete the Graduate Certificate of Health Research Practice students must attain 4 credit points. Both 2 credit point units are core units (these are compulsory).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

#### Trimester 1

HAI010 Academic Integrity (0 credit points)

HSR701 Research Project Part A

#### Trimester 2

HSR702 Research Project Part B

## Work experience

The course comprises two mandatory 2-credit point units (HSR701 Research Project Part A and HSR702 Research Project Part B) that require students to undertake 22 weeks (approximately 600 hours in total) of practical research experience. This experience is at Deakin University, where the student, under supervision, conducts authentic research in a specified area of human nutrition, exercise, or health.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

Research and research skills are developed through two linked 2-credit point units – HSR701 Research Project Part A and HSR702 Research Project Part B. The first of these units requires students to write a comprehensive literature review and develop a detailed research proposal. The second unit requires students to undertake a research project, critically evaluate the outcomes, and write a research thesis. The project is mostly student led, with direction from an academic supervisor with expertise in the field.

# Graduate Certificate of Nursing Practice (Intensive Care)

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Nursing Practice (Intensive Care)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered Cloud (online) with significant campus mode requirements at Burwood (Melbourne) or live via videoconference for distance students
<i>Duration</i>	1 year part-time study. <i>Note: This course is only available part-time</i>
<i>Deakin course code</i>	H545
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point from H771 Master of Nursing Practice*

## Course overview

The Graduate Certificate course is designed to prepare nurses to meet contemporary challenges in intensive care nursing within the specialist field of critical care nursing and to progressively build upon knowledge and skills required to comprehensively care for critically ill patients. The course responds to the demands of industry and partnership/collaborating hospitals for nurses with sophisticated specialty skills and knowledge. The course links Deakin University with existing partners and a number of other collaborating hospitals, all of which have a high demand for specialist intensive care nurses.

The use of both campus based and Cloud (online) learning offers convenient, personalised and engaging learning experiences using the latest digital technologies. You will enjoy a rich, interactive, personal and empowering learning experience designed for postgraduate nurses.

Team-Based Learning (TBL), a specific educational strategy that involves individual preparation, team discussions and immediate class feedback, is conducted at Burwood (Melbourne). Team-Based Learning assists students to further develop their critical thinking, problem solving and teamwork skills by applying recently learnt knowledge to real clinical issues.

A compulsory introductory four day program on Burwood (Melbourne) is normally held in the second week of February.

On completion of the four core units of the Graduate Certificate, students may elect to take an early exit from H771 Masters of Nursing Practice and graduate with a Graduate Certificate in Nursing Practice (Intensive Care). Students may also choose to complete a further four units (includes two core units) and exit with a Graduate Diploma in Nursing Practice (Intensive Care).

Students wishing to complete the Master of Nursing Practice by research and undertake the 4 credit point minor thesis must have completed HNN727 Research in Nursing and meet academic entry requirements.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course. You will also be required to attend Burwood (Melbourne) campus or live via videoconference for distance students – refer to individual unit details in the course structure for more information.

## Career opportunities

The course is attractive to registered nurses wishing to gain entry into specialist intensive care nursing practice and for nurses who may have preliminary skills and beginning knowledge of the area but wish to increase their knowledge and skill to plan a career in the chosen areas of specialty nursing practice.

## Clinical practice

Students normally are employed within a collaborating hospital for a minimum of 24 hours per week to support and provide a sound clinical learning environment for the clinical program requirements of the course. Where concurrent employment is not possible, clinical practicums may be negotiated.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate safe, high quality clinical decision making and psychomotor skills commensurate with specialty intensive care nursing theoretical knowledge, evidence-based practices and person-centred care.
Communication	Demonstrate verbal, written and interpersonal communication skills using discipline-specific language and lay-terms necessary to assess and interpret data, convey ideas, develop plans of care and implement therapeutic interventions to ensure the delivery of high quality, safe nursing care to intensive care patients.
Digital literacy	Use appropriate technologies to locate authoritative discipline-specific information and justify the selection of this information; and demonstrate the ability to evaluate, synthesise and disseminate the information to members of the multidisciplinary health team, and intensive care patients in an ethical and professional manner.
Critical thinking	Identify, synthesise, analyse and critically evaluate complex data from patient and technologically-derived sources to inform decision making that delivers safe, high quality intensive care nursing in order to promote optimal patient outcomes.
Problem solving	Effectively apply specialised nursing knowledge and skills to routine, complex and ill-structured problems in intensive care settings to achieve optimal patient outcomes.
Self-management	Demonstrate personal autonomy, leadership, clinical judgement, professionalism, responsibility, accountability, and reflection as a specialist intensive care nurse.
Teamwork	Establish and maintain collaborative professional respectful relationships demonstrating professionalism, open communication, leadership, responsibility and accountability to the multidisciplinary team, patients and carers.
Global citizenship	Display accountability for, and sound professional judgement in, behaviours that uphold ethical and legal principles of practice within diverse social, cultural and environmental contexts.

## Course rules

To satisfy the requirements of the Graduate Certificate a student must complete a total of 4 credit points of compulsory units, normally taken over one year of part-time study.

Both the theoretical and clinical components of the assessment for each unit must be passed in order to successfully gain an overall pass in this course. Compulsory clinical hurdles form part of the assessment of this course. Recognition of the importance of clinical assessments is calculated in the overall student workload.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

*Note: Failure of a compulsory practicum component in a unit will normally lead to exclusion.*

## Course structure

### Level 1

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HNN751 Advanced Physiology and Patient Assessment \*
- HNN752 Core Principles of Care for the Critically Ill Patient \*

#### Trimester 2

- HNN764 Intensive Care Nursing 1 \*
- HNN774 Intensive Care Nursing 2 \*

\* Domestic students enrol as Cloud (online) students, however there are significant campus requirements. Most classes are conducted in campus mode at Burwood (Melbourne) and are video-conferenced live to other venues.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Public Health

<i>Year</i>	2019
<i>Award granted</i>	Graduate Certificate of Public Health
<i>Campus</i>	Cloud (online)
<i>Cloud Campus</i>	No
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>Deakin course code</i>	H547
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check at the comm or other check. Refer the relevant unit guide.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

Students can exit with the Graduate Certificate of Public Health which consist of 3 core units and 1 elective unit.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

Three core units from the following list:

HAI010	Academic Integrity (0 credit points)
HSH701	Principles and Practice of Public Health
HSH744	Epidemiology 1
HSH746	Biostatistics 1

### Electives

Plus one elective unit from the following list:

HSH702	Contemporary Health Issues and Policies
HSH703	Health Promotion
HSH725	Research Literacy for Health Practice
HSH728	Health Equity and Human Rights
HSH769	Comparative Health Systems

<i>Cloud Campus</i>	No
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>Deakin course code</i>	H556
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit only course from H756 Master of Health and Human Services Management*

## Course overview

The Graduate Certificate of Health and Human Services Management is designed as an exit point option from the Master of Health and Human Services Management. The Graduate Certificate requires the student to undertake three core units and a choice of elective units. All units are core in the Master of Health and Human Services Management.

## Indicative student workload

In the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Participation requirements

In the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check at the comm or other check. Refer the relevant unit guide.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

Students can exit with the Graduate Certificate of Health and Human Services Management which consist of 3 core units and 1 elective unit.

## Course structure

### Core units

HSH717 Health Economics 1  
HSH725 Research Literacy for Health Practice  
HME704 Fundamentals of Health Informatics

Plus one of:

MPA702 Financial Interpretation  
MPM701 Business Process Management

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Nursing Practice (Cardiac Care)

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Nursing Practice (Cardiac Care)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered Cloud (online) with significant campus requirements at Burwood (Melbourne) or live via videoconference for distance students
<i>Duration</i>	1 year part-time study. <i>Note: This course is only available part-time</i>
<i>Deakin course code</i>	H565
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point from H771 Master of Nursing Practice*

## Course overview

The Graduate Certificate course is designed to prepare nurses to meet contemporary challenges in cardiac nursing and interventional cardiology within the specialist field of critical care nursing and to progressively build upon knowledge and skills required to comprehensively care for critically ill patients. The course responds to the demands of industry and partnership/collaborating hospitals for nurses with sophisticated specialty skills and knowledge. The course links Deakin University with existing partners and a number of other collaborating hospitals, all of which have a high demand for specialist cardiac care nurses.

The use of both campus based and Cloud (online) learning offers convenient, personalised and engaging learning experiences using the latest digital technologies. You will enjoy a rich, interactive, personal and empowering learning experience designed for postgraduate nurses.

Team-Based Learning (TBL), a specific educational strategy that involves individual preparation, team discussions and immediate class feedback, is conducted at Burwood (Melbourne). Team-Based Learning assists students to further develop their critical thinking, problem solving and teamwork skills by applying recently learnt knowledge to real clinical issues.

A compulsory introductory four-day program at Burwood (Melbourne) is normally held in the second week of February.

On completion of the four core units of the Graduate Certificate, students may elect to take an early exit from H771 Masters of Nursing Practice and graduate with a Graduate Certificate in Nursing Practice (Cardiac Care). Students may also choose to complete a further four units (includes two core units) and exit with a Graduate Diploma in Nursing Practice (Cardiac Care).

Students wishing to complete the Master of Nursing Practice by research and undertake the 4 credit point minor thesis must have completed HNN727 Research in Nursing and meet academic entry requirements.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course. You will also be required to attend Burwood (Melbourne) campus or live via videoconference for distance students – refer to individual unit details in the course structure for more information.

## Career opportunities

The course is attractive to registered nurses wishing to gain entry into specialist cardiac care nursing practice and for nurses who may have preliminary skills and beginning knowledge of the area but wish to increase their knowledge and skill to plan a career in these chosen areas of specialty nursing practice.

## Clinical practice

Students normally are employed within a collaborating hospital for a minimum of 24 hours per week to support and provide a sound clinical learning environment for the clinical program requirements of the course. Where concurrent employment is not possible, clinical practicums may be negotiated.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate safe, high quality clinical decision making and psychomotor skills commensurate with specialty cardiac nursing theoretical knowledge, evidence-based practices and person-centred care.
Communication	Demonstrate verbal, written and interpersonal communication skills using discipline-specific language and lay-terms necessary to assess and interpret data, convey ideas, develop plans of care and implement therapeutic interventions to ensure the delivery of high quality, safe nursing care to cardiac care patients.
Digital literacy	Use appropriate technologies to locate authoritative discipline-specific information and justify the selection of this information; and demonstrate the ability to evaluate, synthesise and disseminate the information to members of the multidisciplinary health team, and cardiac patients in an ethical and professional manner.
Critical thinking	Identify, synthesise, analyse and critically evaluate complex data from patient and technologically-derived sources to inform decision making that delivers safe, high quality cardiac nursing care in order to promote optimal patient outcomes.
Problem solving	Effectively apply specialised nursing knowledge and skills to routine, complex and ill-structured problems in cardiac care settings to achieve optimal patient outcomes.
Self-management	Demonstrate personal autonomy, leadership, clinical judgement, professionalism, responsibility, accountability, and reflection as a specialist cardiac nurse.
Teamwork	Establish and maintain collaborative professional respectful relationships demonstrating professionalism, open communication, leadership, responsibility and accountability to the multidisciplinary team, patients and carers.
Global citizenship	Display accountability for, and sound professional judgement in, behaviours that uphold ethical and legal principles of practice within diverse social, cultural and environmental contexts.

## Course rules

To satisfy the requirements of the Graduate Certificate a student must complete a total of 4 credit points of compulsory units, normally taken over one year of part-time study.

Both the theoretical and clinical components of the assessment for each unit must be passed in order to successfully gain an overall pass in this course. Compulsory clinical hurdles form part of the assessment of this course. Recognition of the importance of clinical assessments is calculated in the overall student workload.

*Note: Failure of a compulsory practicum component in a unit will normally lead to exclusion.*

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Level 1

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HNN751 Advanced Physiology and Patient Assessment \*
- HNN752 Core Principles of Care for the Critically Ill Patient \*

#### Trimester 2

- HNN765 Cardiac Care Nursing 1 \*
- HNN775 Cardiac Care Nursing 2 \*

\* Domestic students enrol as Cloud (online) students, however there are significant campus requirements. Most classes are conducted in campus mode at Burwood (Melbourne) and are video-conferenced live to other venues.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Nursing Practice (Perioperative)

Year	2019 course information
Award granted	Graduate Certificate of Nursing Practice (Perioperative)
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Offered Cloud (online) with significant campus mode requirements at Burwood (Melbourne) or live via videoconference for distance students
Duration	1 year part time. <i>Note: this course is only available part time</i>
Deakin course code	H572
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point from H771 Master of Nursing Practice*

## Course overview

The Graduate Certificate course is designed to prepare nurses to meet the complex challenges within the speciality practice area of perioperative nursing and to progressively build upon knowledge and skills to explore the specific roles within perioperative nursing practice. The course responds to the demands of industry and partnership/collaborating hospitals by preparing nurses with sophisticated perioperative speciality skills and knowledge.

The use of both campus based and Cloud (online) learning offers convenient, personalised and engaging learning experiences using the latest digital technologies. You will enjoy a rich, interactive, personal and empowering learning experience designed for postgraduate nurses.

A compulsory introductory four day program at Burwood (Melbourne) is normally held in the second week of February.

On completion of the four core units of the Graduate Certificate, students may elect to take an early exit from H771 Masters of Nursing Practice and graduate with a Graduate Certificate in Nursing Practice (Perioperative). Students may also choose to complete a further four units (includes two core units) and exit with a Graduate Diploma in Nursing Practice (Perioperative).

The Master of Nursing Practice (by coursework) may be entered directly from a Graduate Certificate of Nursing Practice (Perioperative) [requires an additional 8 credit points of study] or following completion of a Graduate Diploma of Nursing Practice (Perioperative) [requires an additional 4 credit points of study].

Students wishing to complete the Master of Nursing Practice by research and undertake the 4-credit-point minor thesis must have completed HNN727 Research in Nursing and Midwifery, and must achieve a Distinction or above for 75% of the units undertaken in the Graduate Diploma of Nursing Practice speciality course.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course. You will also be required to attend Burwood (Melbourne) campus or live via videoconference for distance students – refer to individual unit details in the course structure for more information.

## Career opportunities

The course will be attractive to nurses wishing to gain entry into specialist perioperative nursing practice and for nurses who may have preliminary skills and beginning knowledge of the area but wish to increase their knowledge and skill to plan a career in these chosen areas of speciality nursing practice.

## Clinical practice

Students normally are employed within a collaborating hospital for a minimum of 24 hours per week to support and provide a sound clinical learning environment for the clinical program requirements of the course.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate safe, high quality clinical decision making and psychomotor skills commensurate with specialty perioperative nursing theoretical knowledge, evidence-based practices and person-centred care.

# Graduate Certificate of Hospital Administration

<i>Year</i>	2019
<i>Award granted</i>	Graduate Certificate of Hospital Administration
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year part-time
<i>Deakin course code</i>	H578
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Certification of Hospital Administration will enable you to develop essential skills and capabilities required to manage hospitals of different magnitudes and specialisations. Completion of this course will acquaint you with essential hospital management theories and introduce you to cutting edge business process and quality improvement techniques. This course is suited to both international and domestic students.

## Indicative student workload

It is expected that students will spend 150 hours on learning and assessments for each credit point/unit.

## Professional recognition

This course does not have any professional accreditation in Australia. Students seeking professional recognition should refer to M703 Master of Business Administration (Healthcare Management)

## Career opportunities

The course curriculum is designed to impart essential hospital management competencies for students, which means various hospital administration roles like Hospital Manager, Director and Officer roles become open for graduates.

## Pathways

Students who complete this course may be eligible for entry into M703 Master of Business Administration (Healthcare Management)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

To complete the Graduate Certificate of Hospital Administration students must attain 4 credit points. All four 1-credit-point units are core units (these are compulsory).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Trimester 3 2019

- HAI010 Academic Integrity (0 credit points)
- HME706 Fundamentals of Digital Health in Hospitals
- HME707 Hospital Operations

#### Trimester 1 2020

- HME714 Hospital Clinical Governance
- HME705 Hospital Financing

# Graduate Diploma of Psychological Science

<i>Year</i>	
<i>Award granted</i>	Graduate Diploma of Psychological Science
<i>Campus</i>	Offered at Burwood (Melbourne), Waurn Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1.25 years full-time or part-time equivalent
<i>CRICOS course code</i>	099423C
<i>Deakin course code</i>	H603
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Psychological Science (H603) offers students who have already successfully completed an undergraduate degree in any other discipline but who wish to change career path, the opportunity to complete a major sequence in psychology without having to undertake a full-three-year degree.

This one-year Graduate Diploma of Psychological Science (H603) is a 10-credit-point course that is compliant with AQF level 8 standards of knowledge and skills, and will enable you to undertake additional study in pursuit of professional registration as a psychologist.

All 10 units are compulsory, there are no elective units. Upon successful completion of the Graduate Diploma of Psychological Science (H603) students can undertake the further study required to fully register as a psychologist or exit after the one year course and enter a variety of professional demanding the skills of an undergraduate course in psychology.

The Graduate Diploma of Psychological Science can be completed in one calendar year by taking advantage of the Deakin trimester system. It is offered to domestic and international students.

## Indicative student workload

It is expected that students will spend approximately 150 hours per trimester, per credit point.

## Professional recognition

The course has received Australian Psychology Accreditation Council (APAC) accreditation and Psychology Board of Australia endorsement and will enable you to undertake additional study in pursuit of professional registration as a psychologist.

## Career opportunities

The course is designed to build upon and substantially enhance the knowledge and skills graduates from other disciplines have gained, by providing a broad overview of the discipline of psychology in one year of study. This degree allows students with an existing non-psychology degree to fast-track to a career in psychology. Graduates from this course who do not undertake the further study required to fully register as a psychologist are still highly employable in a variety of industries including the public sector and statutory bodies, community groups, non-governmental organisations and business (e.g., human resource management, market research).

## Participation requirements

Students are required to complete units in Trimester 3 if they wish to complete this course in one year.

## Mandatory student checks

There are no mandatory student checks for this course.

## Pathways

This course can be a pathway to an APAC accredited fourth year Honours or Graduate Diploma of Psychology course and other postgraduate coursework programs

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Achieve a deep conceptual understanding of the major ideas, theoretical perspectives, empirical findings and historical trends in the core topics of psychology.
Communication	Communicate effectively in a variety of formats and in a variety of contexts including with diverse ethnic and cultural partners and within teams.
Digital literacy	Be able to use digital technologies to source appropriate materials, conduct research and disseminate findings
Critical thinking	Respect and use critical and creative thinking, sceptical inquiry, and the scientific approach to solve problems related to behaviour and mental processes.  Understand and apply and evaluate basic research methods in psychology including research design, data analysis and interpretation to solve real world problems
Problem solving	Respect and use critical and creative thinking, sceptical inquiry and the scientific approach to solve problems related to behaviour and mental processes.
Self-management	Understand and appreciate the core values of psychology (i.e. value empirical evidence; tolerate ambiguity during the search for a greater understanding of behaviour and knowledge structures ;act ethically and professionally; understand the complexity of sociocultural and international diversity and reflect other values that are the underpinning of psychology as a discipline).
Teamwork	Demonstrate understanding and sufficient responsibility for working in a team, including effective communication for task planning, co-ordination, decision-making and evaluation within the team situation.
Global citizenship	Demonstrate, report and apply ethical principles to understand how to work productively in the field of psychology within diverse social, cultural and environmental contexts by collaborating and communicating in a self-reflective and culturally sensitive manner.

## Course rules

To complete the Graduate Diploma of Psychological Science students must attain 10 credit points. All units in the course are core (these are compulsory) and must be completed. There are no elective units.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Trimester 1

HAI010	Academic Integrity (0 credit points)
HPY711	Psychology A: Fundamentals of Human Behaviour
HPY713	Psychology B: Individual and Social Development
HPS771	Research Methods in Psychology A
HPS773	The Human Mind

### Trimester 2

HPS772	Child and Adolescent Development
HPS781	Research Methods in Psychology B
HPS791	Personality
HPS788	Psychopathology

### Trimester 3

HPS775	Brain, Biology and Behaviour
HPS774	Human Social Behaviour

## Work experience

Not applicable

# Graduate Diploma of Health Economics

<i>Year</i>	2019
<i>Award granted</i>	Graduate Diploma of Health Economics
<i>Campus</i>	Cloud (online)
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	H604
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit only from H704 Master of Health Economics*

## Course overview

The Graduate Diploma of Health Economics provides graduates from a range of disciplines such as nursing and pharmacy through to business administration and health management and beyond, a foundation in health economics. The graduate diploma applies microeconomic concepts relevant to health and economic evaluation to the complexities of resource allocation in the health system. Students will learn skills in economic evaluation of health interventions, resource allocation and priority setting along with foundation skills in biostatistics.

As a graduate, students will be able to evaluate current research in economic evaluation of health services as well as participate effectively in health policy development and debate. In addition to numerous career opportunities, students will have the opportunity to progress to a Master of Health Economics at Deakin University.

## Indicative student workload

Full time study in this course is equivalent to a full time work commitment. Successful students typically spend about 150 hours in learning and assessment for each one credit point unit.

## Mandatory student checks

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

Students must complete 8 credit points.

## Course structure

### Trimester 1

HSH717 Health Economics 1  
HSH719 Economic Evaluation 1  
HSH746 Biostatistics 1

Plus one elective:

HSH744 Epidemiology 1  
HSH763 Financing Health Care

### Trimester 2

HSH762 Resource Allocation and Priority Setting  
HSH764 Economic Evaluation – Theory and Practice  
MPE781 Economics for Managers\*

Plus one elective:

HSH761 Health Technology Assessment 1  
HSH766 Economics and Health Policy Analysis  
HSH768 Health Economics in a Global Context

\* MPE781 is available in Trimester 1, 2 or 3

# Graduate Diploma of Therapeutic Child Play

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Therapeutic Child Play
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Cloud (online). There may be on campus intensives offered.
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	H605
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Sometimes children don't have the words to express what they are feeling. Studying therapeutic child play at Deakin will give you additional skills to pursue your rewarding work with children and their families.

Deakin's therapeutic play and child play therapy courses are the first of their kind offered by an Australian university. The Graduate Diploma of Therapeutic Child Play is taught by practiced teachers equipped with overseas teaching experience, and by pioneering academics in Australian child play therapy research.

The course is designed for medical, allied health, welfare, and education professionals who work in community based services with children, adolescents and families who have experienced developmental, emotional, trauma or events that result in or comprise a mental health issue or concern.

The role of play in lives of children will be explored with an introduction to the theories, models, and practices of therapeutic child play. You will learn how to assess and observe a child's play behaviour, examining the behavioural characteristics present when children have a play deficit.

You will gain knowledge about children's development of play skills and coping, and consider the role of the practitioner in providing age appropriate play based experiences to children and young people.

This includes the study of several aspects of child development (cognitive, linguistic, social, emotional, biological, motor, moral, developmental disorders) from infancy to adolescence.

There will also be an exploration of childhood developmental neuroscience and psychopathology, covering a range of mental health issues such as post traumatic stress disorder (PTSD), autism spectrum disorders, eating disorders, child abuse and bereavement.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 8–10 hours per unit every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

Students are required to attend intensive workshops for several units in the Master of Child Play Therapy and Graduate Diploma of Therapeutic Child Play. Dates for 2019 are listed on Deakin's website.

## Professional recognition

The Master course H705 Master of Child Play Therapy leads to professional recognition. This Postgraduate Diploma is a skills enhancement program that supports practitioners to engage new learning and enhance their existing skills.

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the relevant professional body retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Career opportunities

Graduates will be eligible to work in professional healthcare teams, in individual private practice, and in a range of health, education and community contexts.

## Participation requirements

The course involves a compulsory clinical placement of 40 hours during Trimester 2. The placements may be undertaken in your local area.

Compulsory attendance is required at a four-day on-campus intensive placement workshop as well as the 40 hours in a professional placement and 10 hours of online clinical supervision.

Placement can occur at any time, including during standard holiday breaks. See Deakin's website for further details.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

## Pathways

This course provides a pathway to other postgraduate coursework programs.

## Alternative exits

H505.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Integrate knowledge of attachment, child development, neuroscience and psychopathology to design, implement and scaffold a therapeutic child play intervention.
Communication	Demonstrate verbal, written and interpersonal communication skills necessary to convey ideas, proposals and findings, pertaining to therapeutic child play to a variety of audiences.
Digital literacy	Use appropriate technologies to find, use and disseminate information; and use technologies consistent with ethico-legal requirements for the management of personal information and clinical record keeping.
Critical thinking	Demonstrate an ethical research approach to identify, analyse and critically evaluate evidenced-based practice integrated with relevant literature.
Problem solving	Apply knowledge and skills to assess, plan, implement, evaluate a therapeutic treatment plan or refer to a Child Play Therapist or other Practitioner.
Self-management	Demonstrate personal autonomy and professional judgement in the field of therapeutic child play showing responsibility and accountability, in conjunction with reflective and ethical practice.
Teamwork	Establish and maintain collaborative professional relationships demonstrating responsibility and accountability to the child, family and carers.
Global citizenship	Demonstrate professional and ethical practice and respect for diverse social, cultural and environmental contexts that may impact children and families.

## Course rules

To complete the Graduate Diploma of Therapeutic Child Play students must attain 8 credit points comprising 7 core units (these are compulsory) plus 1 unit from the electives listed below.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSO710 Foundations of Play Therapy
- HSO711 Child Attachment Environment and Trauma
- HSO713 Assessment and Measurement in Play Abilities
- HSO715 Childhood Developmental Neuroscience and Psychopathology

#### Trimester 2

- HSO709 Therapeutic Use of Self
- HSO712 Engaging Children in Play Using Directive Approaches
- HSH725 Research Literacy for Health Practice

## Elective units

Select one unit:

ALL743	Foundations in Narrative Theory
ECP712	Social, Physical and Emotional Health and Wellbeing
HDS732	Determinants of Health and Wellbeing in the Lives of People with Disability
HPS772	Child and Adolescent Development

## Work experience

The course includes a mandatory 1 credit point unit (HSO710), that requires students to undertake at least 6 hours of suitable practical experience. This experience may be in an early childhood setting, home environment or public area, where the student will be exposed to professional e.g. child play and family interactions and associates carrying out their duties.

The course includes a mandatory 1 credit point unit (HSO712), that requires students to undertake at least 40 hours of suitable practical experience. This experience may be in a school environment or community based play therapy clinic, where the student will be exposed to professional e.g. early childhood educators or health care professionals and associates carrying out their duties.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Applied Sport Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Applied Sport Science
<i>Campus</i>	This course is only offered in Cloud (online) mode with on campus intensives
<i>Deakin course code</i>	H607
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point only from H707 Master of Applied Sport Science*

## Course overview

The Graduate Diploma in Applied Sport Science is designed as an exit point option from the Master of Applied Sport Science. Students are required to undertake all the core units in Master of Applied Sport Science. Completion of the Graduate Diploma will prepare students to work in a variety of areas of the sport science industry.

## Indicative student workload

As a student in a Cloud (online) course (with on-campus intensives in some units) in the Faculty of Health you will be expected to spend at least 11–13 hours per unit every week participating in a range of teaching activities each week. This could include classes, seminars, practicals, placements and online interaction via CloudDeakin. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time. Teaching, placements and assessment tasks may take place outside of Deakin University teaching periods.

The core units and the strength and conditioning stream both require attendance at a 5 day practical intensive in Trimester 1 and Trimester 3.

## Pathways

Depending on other professional accreditation, graduates could work as a strength and conditioning coach, sport performance analyst, a sport scientist or sport performance manager.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

Students can exit with the Graduate Diploma of Applied Sport Science which consist of 8 core units.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

HAI010	Academic Integrity (0 credit points)
HSE720	Athlete and Program Development in High Performance Sport
HSE721	High Performance Management in Sport
HSE722	The Scientific Process for Sports Scientists
HSE723	Data Analysis and Program Evaluation for Sports Scientists
HSE724	Strength and Conditioning Methods for Athletes
HSE725	Factors Influencing Training Design for Sport
HSE726	Sport Performance Analysis
HSE727	Advanced Sport Performance Analysis

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Disability and Inclusion

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Disability and Inclusion
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Cloud (online)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years part time
<i>Deakin course code</i>	H608
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point only from H708 Master of Disability and Inclusion*

## Course overview

Deakin's Graduate Diploma of Disability and Inclusion equips students with the academic knowledge they need to pursue professional work in the disability, health, and community sectors.

The course will help you to form a distinctive and contemporary understanding of disability. Drawing on research informed by disability and inclusion theory and practice, the Graduate Diploma of Disability and Inclusion also gives you the opportunity to learn from the lived experience of people with disability.

This graduate diploma comprises seven core single credit point units and one selective single credit point unit, and is designed to meet specialist education and training needs in the disability, human service and community workforce both locally and nationally. Graduates of this course are ideally placed to take advantage of the growth opportunities in these sectors as the National Disability Insurance Scheme is rolled out across Australia in 2016.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 8–10 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Career opportunities

The Graduate Diploma of Disability and Inclusion is designed to meet specialist education and training needs in the disability, human service and community workforce locally and nationally, in particular in relation to the national roll out of the National Disability Insurance Scheme in Australia from 2016.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply advanced knowledge and skills in the area of Disability and Inclusion that includes evidence based theoretical approaches to policy, participation and social inclusion of people with Disabilities.
Communication	Communicate on disability and inclusion issues in an effective and coherent manner, mindful of the target audience using a range of modes.
Digital literacy	Use digital technologies to source, use and disseminate ideas and information relevant to Disability and Inclusion to a range of audiences including people with disability.
Critical thinking	Critically analyse and evaluate evidence based policy and practice that create barriers and enablers to inclusion of people with disability.
Problem solving	Apply advanced cognitive and creative skills to find solutions to complex real world problems experienced by people with disability.
Self-management	Work and learn about disability and inclusion demonstrating a high level of personal responsibility, autonomy and professional judgement.
Teamwork	Contribute to the productive functioning of a multi-skilled team and build constructive relationships in learning and working with people with disability.
Global citizenship	Demonstrate a high level of awareness and respect for diversity in line with contemporary human rights obligations and recognise and apply a strong ethical approach to disability research and practice.

## Course rules

To complete the Graduate Diploma of Disability and Inclusion students must attain 8 credit points. Seven 1-credit-point units are core units (these are compulsory) and choose 1 selective unit.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Level 1

##### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HDS730 Disability and Inclusion: Contemporary Theory and Lived Experience
- HDS731 Planning for Inclusion Across the Life Course
- HDS736 Disability Research – Inclusive Approaches

Plus 1 prescribed elective:

- HSH702 Contemporary Health Issues and Policies
- ADS701 Introduction to International and Community Development

### Trimester 2

- HDS732 Determinants of Health and Wellbeing in the Lives of People with Disability
- HDS733 Community Capacity Building – Theory and Practice for Inclusion
- HDS734 Inclusive Design and Technology

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Health Promotion

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Health Promotion
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	018317J
<i>Deakin course code</i>	H615
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Learn how to engage individuals and communities locally and globally with the care of their health and wellbeing. Study health promotion at Deakin and you will be armed with the skills needed to work in this rapidly-growing area of the health sector.

Increasingly, health promotion activities are being incorporated into workplaces and communities around the world. The Graduate Diploma of Health Promotion is designed to give you the knowledge and skills necessary to develop professional approaches to evidence-based health promotion practice, so that you can apply your expertise to a range of settings.

Deakin's postgraduate degrees in health promotion are suited to those wanting a career in the health sector, as well as those already working in health wishing to upgrade their knowledge and qualifications to pursue management roles.

The course will give you an understanding of health promotion concepts and approaches as they relate to contemporary health issues in Australia and internationally. You will learn program planning and development approaches, and gain an understanding of the importance of needs assessment, vision and goal setting, program design principles, evaluation design, budgeting, sustainability and resourcing.

You will acquire knowledge of current and emerging health issues in local and global contexts, get training in strategic communication and health advocacy, and graduate armed with the core competencies required to practise confidently in this field.

As a graduate, you will be qualified to take advantage of the career opportunities that exist world-wide in national and international health organisations, community organisations, human services agencies, government departments, and NGOs. Roles might include health promotion officer, policy officer, health and wellbeing officer, community development officer, health educator, as well as roles in youth services, aged and disability services and primary care.

To extend your knowledge and qualifications, you may choose to articulate into Deakin's Master of Health Promotion.

When you graduate you will be eligible to apply for membership of the Australian Health Promotion Association and the International Union of Health Promotion and Education. Professional association membership means that your qualifications will be recognised by leading employers within the industry – enhancing your career opportunities.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and on-line interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Graduates in this course should be eligible to apply for membership of the Australian Health Promotion Association and the International Union of Health Promotion and Education.

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the relevant professional body retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Career opportunities

Following successful completion of the Graduate Diploma of Health Promotion, you will be qualified to take advantage of the career opportunities that exist world-wide in national and international health organisations; medium-sized businesses; multinational corporations; community organisations; human services agencies; local, state and federal government departments; statutory authorities; and Non-Government Organisations (NGOs).

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternate exits

H515

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Apply a critical and advanced knowledge in the area of health promotion that includes:</p> <ul style="list-style-type: none"> <li>theories of behaviour change, inequalities and inequities in health including the concept of the social gradient and relevance to practice, the action areas for health promotion, as well as the determinants of health.</li> <li>the behavioural and socio-environmental models of health and their relevance to health promotion practice in general and needs assessment in particular.</li> <li>stages of program planning, implementation, evaluation and sustainability.</li> </ul>

Graduate learning outcomes	Course learning outcomes
Communication	<p>Communicate on health promotion issues in an effective and coherent manner and mindful of the target audience.</p> <p>Articulate the various ways in which health promotion practice is influenced, such as, ethnicity and Indigenous status, age, gender, society, culture, geography, the environment and socio-economic status.</p>
Digital literacy	<p>Demonstrate understanding of current technologies and digital literacies applicable to health promotion.</p> <p>Utilise a range of digital technologies and information sources to discover, select, analyse, employ, evaluate, and disseminate both technical and non-technical information.</p>
Critical thinking	<p>Demonstrate critical thinking in evaluating solutions to health promotion problems.</p> <p>Access and critically analyse information drawn from a variety of sources.</p> <p>Critically reflect on the impact of inequalities and social disadvantage on the health of individuals and communities.</p>
Problem solving	<p>Apply theoretical constructs and critical analysis to real-world and ill-defined problems and develop innovative health promotion solutions with creativity.</p> <p>Analyse and develop strategies to promote health. Assess the health status of communities and evaluate intervention processes and outcomes using appropriate analytical and research methods.</p>
Self-management	<p>Apply knowledge and skills in creative ways to new situations in professional practice and/or further learning in the field of health promotion with adaptability, autonomy, responsibility and personal accountability for actions as a practitioner and a learner.</p> <p>Reflect upon and critique skills developed and plan for their own future continuing professional development.</p>
Teamwork	<p>Apply teamwork, leadership and management skills and principles to work effectively in a team environment and with others from a range of disciplines and backgrounds.</p>
Global citizenship	<p>Apply the highest ethical standards in the development, design, construction and management of health promotion programs and activities.</p>

## Course rules

To complete the Graduate Diploma of Health Promotion students must attain 8 credit points comprising 7 1-credit-point core units (these are compulsory) and 1 credit point elective unit.

The elective unit is selected from then list. Students successfully completing the Graduate Certificate of Health Promotion (H515) may be eligible for up to 4 credit points of Recognition of Prior Learning towards this course.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSH702 Contemporary Health Issues and Policies
- HSH703 Health Promotion
- HSH704 Health Communication

Plus one elective credit point

#### Trimester 2

- HSH705 Needs Assessment and Health Program Planning
- HSH725 Research Literacy for Health Practice
- HSH728 Health Equity and Human Rights
- HSH745 Health Program Evaluation

### Elective unit options

- HSH701 Principles and Practice of Public Health
- HSH709 Health and Social Impact Assessment
- HSH712 Alcohol, Tobacco, and other Drugs
- HSH715 Qualitative Health Research
- HSH717 Health Economics 1
- HSH719 Economic Evaluation 1
- HSH724 Healthy Cities and Urban Communities
- HSH736 Community Consultation and Participation
- HSH739 Global Health Policy and Planning
- HSH740 Unit description is currently unavailable
- HSH744 Epidemiology 1

# Graduate Diploma of Human Nutrition

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Human Nutrition
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	H616
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Human Nutrition provides the opportunity to learn about nutrition in a broad context ranging from metabolic studies and food science to social and behavioural nutrition. It will enable you to understand and learn to apply knowledge in the areas of; the physiological basis of nutrition; nutritional requirements; the nature and composition of foods and food groups; nutritional assessment; and social, cultural and economic aspects of nutrition.

This course provides you with the opportunity to undertake a diverse range of elective study options, thus giving you the ability to pursue topic areas that align with your interests and career aspirations. Students looking to pursue a specific nutrition career pathway should first visit the School of Exercise and Nutrition Sciences' Careers website to ensure the elective units they select will meet their career development needs.

This course also provides a pathway for application to the Master of Human Nutrition (H714) which enables you to further your studies to enhance your employment prospects and/or research skills in nutrition.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

Growing public interest in the relationship between diet and health is evident and, as a result, there are increasing demands from the public for reliable and trustworthy information. In response, the Nutrition Society of Australia (NSA) has developed a 'Register of Nutritionists' to establish a list of appropriately qualified nutrition professionals.

As a graduate of this course, you may be eligible for registration as an 'Associate Nutritionist'. Following three years of relevant work experience, Associate Nutritionists are able to apply for 'Registered Nutritionist' status. Registration with NSA does not authorise registrants to obtain provider numbers with Medicare or Private Health Insurers. Please refer to the Nutrition Society of Australia website for further information or queries about registration.

## Career opportunities

Graduates will be equipped to find careers as a nutritionist, nutrition promotion officer and nutrition consultant.

Graduates can expect to gain employment in a wide range of organisations such as food industry, state or local government community settings, state and federal health departments, NGOs with a nutrition focus, media or the corporate sector.

## Mandatory student checks

Applicable only to students undertaking practicum units, who will therefore require a Working With Children Check. Not mandatory for all students.

## Pathways

- H714 Master of Human Nutrition
- H748 Master of Nutrition and Population Health

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply advanced and integrated knowledge of nutrition and health to nutrition related health problems.
Communication	Select and use appropriate modes of communication to obtain and share evidence based nutrition knowledge.
Digital literacy	Select and use appropriate technologies to analyse and synthesise complex nutrition information and problems, and to interpret and share knowledge, skills and ideas.
Critical thinking	Critically analyse, reflect on and synthesise complex information and problems in nutrition, to come to well-reasoned conclusions.
Problem solving	Apply best practice and evidence to identify problems and generate and evaluate practical solutions to complex nutrition issues.
Self-management	Employ high level personal responsibility, accountability and autonomy to demonstrate expert judgement, adaptability to new situations, effective work practices, and responsibility as a nutritionist.
Teamwork	Establish, contribute and maintain a key role in relationships with a range of stakeholders to achieve successful outcomes to advance nutrition sciences.
Global citizenship	Engage in professional and ethical practice that demonstrates a high level of personal autonomy, within diverse contexts in nutrition sciences.

## Course rules

The course consists of 8 credit points completed as: 4 core units (1 credit point each) and 4 credit points of elective units listed below. You may choose to undertake 2 electives from postgraduate units offered by any faculty of the University (subject to unit rules and approval by the Course Director) and 2 electives from the elective units listed below.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSN701 Principles of Nutrition (also offered in Trimester 3)
- HSN749 Biochemistry and Physiology for Human Nutrition

#### Trimester 2

- HSN702 Lifespan Nutrition
- HSN735 Essentials of Food Science

### Elective units

#### Trimester 1

- HSN703 Diet and Disease
- HSN705 Public Health Nutrition
- HSN708 Nutrition Promotion
- HSN713 Food, Nutrition and Behaviour
- HSN750 Nutrition Research Project Part A

#### Trimester 2

- HSN706 Food Policy and Public Health
- HSN709 Sports Nutrition
- HSN714 Systems Thinking in Public Health Nutrition
- HSN715 Understanding Human Nutrition Research Studies
- HSN734 Obesity Prevention
- HSN741 Postgraduate Nutrition Practicum
- HSN746 Nutritional Issues from Early Childhood to Adolescence
- HSN751 Nutrition Research Project Part B

#### Trimester 3

- HSN701 Principles of Nutrition
- HSN719 Assessment Methods for Nutrition and Physical Activity Research
- HSN738 International Nutrition
- HSN743 Nutrition for Healthy Ageing
- HSN750 Nutrition Research Project Part A
- HSN753 Research Practice in Human Nutrition
- HSN760 International Perspectives in Food and Nutrition (next offered Trimester 3 2019)

## Work experience

Work Integrated Learning principles are embedded within all units. A Postgraduate Nutrition Practicum unit is also available for students to elect to undertake. Specifically designed Careers modules are available on the Course specific cloud Deakin site.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

A 1 credit point elective unit “International Perspectives in Nutrition” which features a 2 week study tour is available to all students every second year.

# Graduate Diploma of Nursing Practice (Intensive Care)

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Nursing Practice (Intensive Care)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered Cloud (online) with significant campus mode requirements at Burwood (Melbourne) or live via videoconference for distance students
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	H645
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point from H771 Master of Nursing Practice*

## Course overview

The Graduate Diploma course is designed to prepare nurses to meet contemporary challenges in intensive care nursing within the specialist field of critical care nursing and to progressively build upon knowledge and skills required to comprehensively care for critically ill patients. The course responds to the demands of industry and partnership/collaborating hospitals for nurses with sophisticated specialty skills and knowledge. The course links Deakin University with existing partners and a number of other collaborating hospitals, all of which have a high demand for specialist intensive care nurses.

The use of both campus based and Cloud (online) learning offers convenient, personalised and engaging learning experiences using the latest digital technologies. You will enjoy a rich, interactive, personal and empowering learning experience designed for postgraduate nurses.

Team-Based Learning (TBL), a specific educational strategy that involves individual preparation, team discussions and immediate class feedback, is conducted at Burwood (Melbourne). Team-Based Learning assists students to further develop their critical thinking, problem solving and teamwork skills by applying recently learnt knowledge to real clinical issues.

A compulsory introductory four day program at Burwood (Melbourne) is normally held in the second week of February.

On completion of the 6 core units and 2 elective units of the Graduate Diploma, students may elect to take an early exit from H771 Masters of Nursing Practice and graduate with a Graduate Diploma in Nursing Practice (Intensive Care).

Students wishing to complete the Master of Nursing Practice by research and undertake the 4 credit point minor thesis must have completed HNN727 Research in Nursing and Midwifery, and meet academic entry requirements.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course. You will also be required to attend Burwood (Melbourne) campus or live via videoconference for distance students – refer to individual unit details in the course structure for more information.

## Career opportunities

The course is attractive to nurses wishing to gain entry into specialist intensive care nursing practice and for nurses who may have preliminary skills and beginning knowledge of the area but wish to increase their knowledge and skill to plan a career in these chosen areas of specialty nursing practice.

## Clinical practice

Students normally are employed within a collaborating hospital for a minimum of 24 hours per week to support and provide a sound clinical learning environment for the clinical program requirements of the course. Where concurrent employment is not possible, clinical practicums may be negotiated.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate safe, high quality clinical advanced decision making and psychomotor skills commensurate with specialty intensive care theoretical knowledge, evidence-based practices and person-centred care.
Communication	Demonstrate proficient verbal, written and interpersonal communication skills using discipline-specific language and lay-terms necessary to assess and interpret data, convey ideas, develop plans of care and implement therapeutic interventions to ensure the delivery of high quality, safe nursing care to intensive care patients.
Digital literacy	Use appropriate technologies to locate authoritative discipline-specific information and justify the selection of this information; and demonstrate the ability to proficiently evaluate, synthesise and disseminate the information to members of the multidisciplinary health team, and intensive care patients in an ethical and professional manner.
Critical thinking	Identify, synthesise, analyse and critically evaluate complex data from patient and technologically-derived sources to inform advanced decision making in intensive care that delivers safe, high quality nursing care in order to promote optimal patient outcomes.
Problem solving	Proficiently apply specialised and advanced nursing knowledge and skills to routine, complex and ill-structured problems in intensive care settings to achieve optimal patient outcomes.
Self-management	Demonstrate personal autonomy, leadership, advanced clinical judgement, professionalism, responsibility, accountability, and reflection as a specialist intensive care nurse.
Teamwork	Establish and maintain collaborative professional respectful relationships demonstrating professionalism, proficiency, open communication, leadership, responsibility and accountability to the multidisciplinary team, patients and carers.
Global citizenship	Display accountability for, and advanced professional judgement in, behaviours that uphold ethical and legal principles of practice within diverse social, cultural and environmental contexts.

## Course rules

The Graduate Diploma course comprises eight credit points of study. These include six units of specialty study and two elective units of study. Of the six specialty units, four units are concurrently offered as the Graduate Certificate program. The two elective units of study may be selected from a comprehensive range of units currently offered in the School of Nursing and Midwifery.

Both the theoretical and clinical components of the assessment for each unit must be passed in order to successfully gain an overall pass in this course. Compulsory clinical hurdles form part of the assessment of this course. Recognition of the importance of clinical assessments is calculated in the overall student workload.

*Note: Failure of a compulsory practicum in a unit will normally lead to exclusion.*

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Level 1

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HNN751 Advanced Physiology and Patient Assessment \*
- HNN752 Core Principles of Care for the Critically Ill Patient \*
- HNN750 Inquiry Into Specialty Nursing Practice \*

Plus one elective unit

#### Trimester 2

- HNN764 Intensive Care Nursing 1 \*
- HNN774 Intensive Care Nursing 2 \*
- HNN788 Advanced Concepts in Specialty Nursing Practice \*

Plus one elective unit

\* Domestic students enrol as Cloud (online) students, however there are significant campus requirements. Most classes are conducted in campus mode at Burwood (Melbourne) and are video-conferenced live to other venues.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Psychology

*NOTE: Cloud (online) is available to Domestic students only, limited places available.*

*This course version is only available to continuing students.*

## Course overview

If you are a psychology graduate, undertake an additional year of study to get registered as a provisional psychologist.

This honours year equivalent in psychology is useful for both those pursuing a career as a psychologist, and those preparing for postgraduate study.

During the honours equivalent year, students who have previously completed a relevant undergraduate degree learn a range of psychological assessment methods, plus get an understanding of the process of formulating psychological opinion in casework. The research and analytical skills you develop in your fourth year will strengthen the quality of your research projects, and become indispensable tools in your future career.

Possible career options include work in mental and general hospitals and clinics, business and industry, education, the criminal justice system, media, marketing, sport and research. If you choose to pursue full registration as a psychologist, you may find employment in a variety of settings including clinical, forensic, organisational, educational, health, sport and many other specialist areas.

This course is recognised for registration purposes by the Psychology Board of Australia and is accredited by the Australian Psychology Accreditation Council (APAC). As a graduate you will be eligible to apply for provisional registration as a psychologist and for entry to APAC accredited Master or Doctoral level training programs that lead to registration as a psychologist.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

This course is accredited by the Australian Psychology Accreditation Council (APAC), recognised for registration purposes by the Psychology Board of Australia and meets the requirements for associate membership of the Australian Psychological Society (APS).

In addition, it provides a basis for students wishing to apply to undertake higher degree studies in a more specialised field of applied psychology.

## Career opportunities

During the honours year, students who have previously completed a relevant undergraduate degree learn a range of psychological assessment methods, plus get an understanding of the process of formulating psychological opinion in casework. The research and analytical skills you develop in your honours year will strengthen the quality of your research projects, and become indispensable tools in your future career. Possible career options include work in mental and general hospitals and clinics, business and industry, education, the criminal justice system, media, marketing, sport and research. If you choose to pursue full registration as a psychologist, you may find employment in a variety of settings including clinical, forensic, organisational, educational, health, sport and many other specialist areas.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs.

## Registration as a psychologist

The current requirements for registration as a provisional psychologist include the completion of four years of academic study of psychology that is recognised by the Psychology Board of Australia. The academic program usually consists of an approved undergraduate psychology sequence followed by an approved fourth-year of study, such as Deakin's Graduate Diploma of Psychology or honours in psychology.

Following successful completion of an approved fourth-year of psychology study, you may apply for provisional registration with the Psychology Board of Australia and associate membership of the Australian Psychological Society (APS). Deakin's Bachelor of Psychology (Honours) can lead directly to provisional registration provided the honours year is completed within this four-year course.

In order to gain full registration, provisional psychologists must then complete either two years of supervised practice, or a minimum two years of further study, which may include: Master of Psychology, Doctor of Psychology or a Doctor of Philosophy (PhD) (with supervised practice completed outside the degree).

*Note: This course is currently accredited as at the date of publishing.*

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply advanced skills to select appropriate digital tools to source, interpret, adapt, collate, analyse and disseminate discipline specific information in psychology to a variety of audiences relevant to pre-professional practice of psychology.
Communication	Demonstrate clear written and oral communication skills in order to convey complex psychological knowledge and ideas to laypeople and professionals
Digital literacy	Apply advanced skills to select appropriate digital tools to find, use and disseminate information.
Critical thinking	Competence in the design and conduct of research, critically evaluate, synthesise and integrate complex scientific evidence, and apply this knowledge to assessment, counselling and case management that demonstrate evidence-based pre-professional practice in the field of psychology.
Problem solving	Respect and use critical and creative thinking, sceptical inquiry and the scientific approach to solve problems related to research and applied skills (psychological assessment, counselling and case-management) in the field of psychology.
Self-management	Display high level self-management through reflection, continual improvement and learning that reinforces the importance of responsibility and accountability for pre-professional development in the field of psychology.
Teamwork	Communicate effectively in a variety of formats and in a variety of contexts with diverse ethnic and cultural partners and teams.
Global citizenship	Demonstrate, report and apply ethical principles to understand how to work productively in the field of psychology within diverse social, cultural and environmental contexts by collaborating and communicating in a self-reflective and culturally sensitive manner.

## Course rules

To complete the Graduate Diploma in Psychology students must attain 8 credit points.

The Graduate Diploma of Psychology Science consists of two components: coursework and a thesis.

The coursework component (consisting of classes and seminars) contributes 50% to the final grade awarded. Part time students must complete the coursework component in the first year of their course. As required by the accreditation guidelines of the Australian Psychological Society, the coursework covers:

- research methods;
- issues in psychological assessment; and
- client-centred skills in practice

For further details of the coursework component, see the unit description for HPS715, HPS742, HPY710 and HPY712.

The thesis component (see HPY720 and HPY721) contributes 50% to the final grade of honours awarded. The thesis is a write-up of an individual research project based on an original piece of empirical research. A range of types of data (qualitative, quantitative, subjective, objective) and a range of data-collection settings and methodologies can be used as the basis of the thesis component.

The thesis is submitted in two parts:

- a 1500 word research proposal and oral presentation submitted mid-year and
- a 5000-word report on the empirical component submitted in October.

The literature review and empirical report section of the thesis typically contribute 30% and 70% respectively to the final mark for the thesis component. Part time students must complete the research component in the second year of their course.

Attendance and presentation at the annual School Fourth Year Conference is a hurdle requirement. Students enrolled in the CLOUD online mode have the option to attend or undertake an alternative assessment.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

Course structure applies to students who commenced in 2015 onwards. Students who commenced prior to 2015 should refer to previous online Handbooks or consult your course enrolment officer.

#### Trimester 1

HAI010	Academic Integrity (0 credit points)
HPS715	Psychological Assessment
HPS742	Research Methods in Psychology C
HPY720	Research Project A

#### Trimester 2

HPY710	Client-Centred Skills in Practice
HPY712	Research Methods in Psychology D
HPY721	Research Project B

Part time students wishing to deviate from the recommended structure should consult the course director.

## Work experience

Not applicable

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

The thesis component (see HPY720 and HPY721) contributes 50% to the final grade of H650. And these units are 2 credit points each.

The thesis is submitted in two parts:

- A research proposal comprising a 1500 written piece covering rationale, methods, proposed analyses, and a 10 minute oral presentation (submitted in early May)
- a 5000-word report on the empirical component submitted in October.

The thesis proposal and the written empirical report constitute the full assessment in the paired units HPY720 and HPY721. The thesis proposal and empirical report contribute 30% and 70% respectively to the final mark for the thesis component.

# Graduate Diploma of Health and Human Services Management

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Health and Human Services Management
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	H656
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit only course from H756 Master of Health and Human Services Management*

## Course overview

The Graduate Diploma of Health and Human Services Management is designed as an exit point option from the Master of Health and Human Services Management. The Graduate Diploma requires the student to undertake three core units and a choice of elective units.

## Indicative student workload

In the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check at the comm or other check. Refer the relevant unit guide.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

Students can exit with the Graduate Diploma of Health and Human Services Management which consist of 3 core units and 5 elective units selected from lists in the course structure.

## Course structure

### Core units

HSH717 Health Economics 1  
HSH725 Research Literacy for Health Practice  
HME704 Fundamentals of Health Informatics

Plus one of:

MPA702 Financial Interpretation  
MPM701 Business Process Management

Plus four of:

HSH702 Contemporary Health Issues and Policies  
HSH719 Economic Evaluation 1  
HSH762 Resource Allocation and Priority Setting  
HME711 Health Law and Ethics  
HME712 Healthcare Operations  
MPM722 Human Resource Management

# Graduate Diploma of Psychology (Pre-Practice)

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Psychology (Pre-Practice)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Burwood (Melbourne), Waurn Ponds (Geelong) <sup>^</sup> , Cloud (online)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>Deakin course code</i>	H664
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

<sup>^</sup> Students enrol at Waurn Ponds (Geelong), however the second year of the course is taught at Waterfront (Geelong). Students commencing in Trimester 2 or Trimester 3 must start their second year in Trimester 1.

*This course is offered to continuing students only.*

## Course overview

Complete the equivalent of a psychology undergraduate and Honours degree in two years full-time instead of four.

If you are interested in a career in psychology and you have already completed an undergraduate degree in another field, this course gets you on the fast track towards your dream job.

In year one, you will complete the equivalent of a three-year psychology sequence. This includes units in social psychology, cognition, research methods, development, personality, psychopathology and neuropsychology, giving a broad understanding of psychology.

In year two, you will undertake the Honours program. You will also undertake coursework designed to support your skills in research.

Once you graduate from this course, you can apply for provisional registration as a psychologist and to pursue entry into postgraduate courses.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

### Registration as a psychologist

The current requirements for registration as a provisional psychologist include the completion of four years of academic study of psychology that is recognised by the Psychology Board of Australia. The academic program usually consists of an approved undergraduate psychology sequence followed by an approved fourth-year of study, such as Deakin's Graduate Diploma of Psychology or honours in psychology.

Following successful completion of an approved fourth-year of psychology study, you may apply for provisional registration with the Psychology Board of Australia and associate membership of the Australian Psychological Society (APS). In order to gain full registration, provisional psychologists must then complete either two years of supervised practice, or a minimum two years of further study, which may include: Master of Psychology, Doctor of Psychology or a Doctor of Philosophy (PhD) (with supervised practice completed outside the degree).

## Career opportunities

After successfully completing the Graduate Diploma of Psychology (Pre-Practice) you will be well prepared for employment in a wide range of areas relevant to human wellbeing, such as social work, youth work, careers counselling, work/life counselling, developmental psychology, research psychology, or mental health rehabilitation.

Depending on your chosen area and level of further study, you will be able to work in a variety of settings, including specialist areas of psychology practice, such as clinical, forensic, organisational, educational, health, sport and many others. The contexts in which you work may include hospitals, business organisations, schools, universities, government agencies, community sporting groups, various research groups or in private practice.

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs.

## Registration as a psychologist

The current requirements for registration as a provisional psychologist include the completion of four years of academic study of psychology that is recognised by the Psychology Board of Australia. The academic program usually consists of an approved undergraduate psychology sequence followed by an approved fourth-year of study, such as Deakin's Graduate Diploma of Psychology or honours in psychology.

Following successful completion of an approved fourth-year of psychology study, you may apply for provisional registration with the Psychology Board of Australia and associate membership of the Australian Psychological Society (APS). In order to gain full registration, provisional psychologists must then complete either two years of supervised practice, or a minimum two years of further study, which may include: Master of Psychology, Doctor of Psychology or a Doctor of Philosophy (PhD) (with supervised practice completed outside the degree).

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Achieve a deep conceptual understanding of the major ideas, theoretical perspectives, empirical findings and historical trends in the core topics of psychology.
Communication	Communicate effectively in a variety of formats and in a variety of contexts including with diverse ethnic and cultural partners and within teams.
Digital literacy	Be able to understand, apply and evaluate basic research methods in psychology including research design, data analysis and interpretation and the appropriate use of technologies.
Critical thinking	Respect and use critical and creative thinking, sceptical inquiry, and the scientific approach to solve problems related to behaviour and mental processes.  Understand and apply psychological principles to personal, social and organisational issues.
Problem solving	Respect and use critical and creative thinking, sceptical inquiry and the scientific approach to solve problems related to behaviour and mental processes.
Self-management	Understand and appreciate the core values of psychology (i.e. value empirical evidence; tolerate ambiguity during the search for a greater understanding of behaviour and knowledge structures ;act ethically and professionally; understand the complexity of sociocultural and international diversity and reflect other values that are the underpinning of psychology as a discipline).
Teamwork	Communicate effectively in a variety of formats and in a variety of contexts including with diverse ethnic and cultural partners and within teams.
Global citizenship	Demonstrate, report and apply ethical principles to understand how to work productively in the field of psychology within diverse social, cultural and environmental contexts by collaborating and communicating in a self-reflective and culturally sensitive manner.

## Course rules

To complete the Graduate Diploma of Psychology (Pre-Practice) students must attain 16 credit points. All units in the course are core (these are compulsory) and must be completed; there are no elective units.

Students need to achieve an average grade of 60 across all year one units of the degree to gain entry into year 2.

## Course structure

### Core units

#### Year 1

##### Trimester 1

HPS771	Research Methods in Psychology A
HPS773	The Human Mind
HPS774	Human Social Behaviour
HPS775	Brain, Biology and Behaviour

##### Trimester 2

HPS772	Child and Adolescent Development
HPS781	Research Methods in Psychology B
HPS788	Psychopathology
HPS791	Personality

Students undertaking the final year of the degree part-time must complete the coursework units before the thesis units HPY720 and HPY721 (see Table below for a list of units).

#### Year 2

##### Trimester 1

HPS715	Psychological Assessment
HPS742	Research Methods in Psychology C
HPY720	Research Project A

##### Trimester 2

HPY710	Client-Centred Skills in Practice
HPY712	Research Methods in Psychology D
HPY721	Research Project B

Part time students wishing to deviate from the recommended structure should consult the course director.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Nursing Practice (Cardiac Care)

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Nursing Practice (Cardiac Care)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>

Students normally are employed within a collaborating hospital for a minimum of 24 hours per week to support and provide a sound clinical learning environment for the clinical program requirements of the course. Where concurrent employment is not possible, clinical practicums may be negotiated.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate safe, high quality clinical advanced decision making and psychomotor skills commensurate with specialty cardiac care theoretical knowledge, evidence-based practices and person-centred care.
Communication	Demonstrate proficient verbal, written and interpersonal communication skills using discipline-specific language and lay-terms necessary to assess and interpret data, convey ideas, develop plans of care and implement therapeutic interventions to ensure the delivery of high quality, safe nursing care to cardiac care patients.
Digital literacy	Use appropriate technologies to locate authoritative discipline-specific information and justify the selection of this information; and demonstrate the ability to proficiently evaluate, synthesise and disseminate the information to members of the multidisciplinary health team, and cardiac care patients in an ethical and professional manner.
Critical thinking	Identify, synthesise, analyse and critically evaluate complex data from patient and technologically-derived sources to inform advanced decision making in cardiac care that delivers safe, high quality nursing care in order to promote optimal patient outcomes.
Problem solving	Proficiently apply specialised and advanced nursing knowledge and skills to routine, complex and ill-structured problems in cardiac care settings to achieve optimal patient outcomes.
Self-management	Demonstrate personal autonomy, leadership, advanced clinical judgement, professionalism, responsibility, accountability, and reflection as a specialist cardiac care nurse.
Teamwork	Establish and maintain collaborative professional respectful relationships demonstrating professionalism, proficiency, open communication, leadership, responsibility and accountability to the multidisciplinary team, patients and carers.
Global citizenship	Display accountability for, and advanced professional judgement in, behaviours that uphold ethical and legal principles of practice within diverse social, cultural and environmental contexts.

## Course rules

The Graduate Diploma course comprises eight credit points of study. These include six units of specialty study and two elective units of study. Of the six specialty units, four units are concurrently offered as the Graduate Certificate program. The two elective units of study may be selected from a comprehensive range of units currently offered in the School of Nursing and Midwifery.

Both the theoretical and clinical components of the assessment for each unit must be passed in order to successfully gain an overall pass in this course. Compulsory clinical hurdles form part of the assessment of this course. Recognition of the importance of clinical assessments is calculated in the overall student workload.

*Note: Failure of a compulsory practicum in a unit will normally lead to exclusion.*

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Level 1

#### Trimester 1

HAI010	Academic Integrity (0 credit points)
HNN751	Advanced Physiology and Patient Assessment *
HNN752	Core Principles of Care for the Critically Ill Patient *
HNN750	Inquiry Into Specialty Nursing Practice *

Plus one elective unit

#### Trimester 2

HNN765	Cardiac Care Nursing 1 *
HNN775	Cardiac Care Nursing 2 *
HNN788	Advanced Concepts in Specialty Nursing Practice *

Plus one elective unit

\* Domestic students enrol as Cloud (online) students, however there are significant campus requirements. Most classes are conducted at Burwood (Melbourne) and are video-conferenced live to other venues.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Nursing Practice (Emergency Care)

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Nursing Practice (Emergency Care)
<i>Course Map</i>	<a href="https://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered Cloud (online) with significant campus mode requirements at Burwood (Melbourne) or live via videoconference for distance students
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	H666
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point from H771 Master of Nursing Practice*

## Course overview

The Graduate Diploma course is designed to prepare nurses to meet contemporary challenges in emergency nursing within the specialist field of critical care nursing and to progressively build upon knowledge and skills required to comprehensively care for critically ill patients. The course responds to the demands of industry and partnership/collaborating hospitals for nurses with sophisticated specialty skills and knowledge. The course links Deakin University with existing partners and a number of other collaborating hospitals, all of which have a high demand for specialist emergency care nurses.

The use of both campus based and Cloud (online) learning offers convenient, personalised and engaging learning experiences using the latest digital technologies. You will enjoy a rich, interactive, personal and empowering learning experience designed for postgraduate nurses.

Team-Based Learning (TBL), a specific educational strategy that involves individual preparation, team discussions and immediate feedback, is conducted at Burwood (Melbourne). Team-Based Learning assists students to further develop their critical thinking, problem solving and teamwork skills by applying recently learnt knowledge to real clinical issues.

A compulsory, introductory four day program at Burwood (Melbourne) is normally held in the second week of February.

On completion of the 6 core units and 2 elective units of the Graduate Diploma, students may elect to take an early exit from H771 Masters of Nursing Practice and graduate with a Graduate Diploma in Nursing Practice (Emergency Care).

Students wishing to complete the Master of Nursing Practice by research and undertake the 4 credit point minor thesis must have completed HNN727 Research in Nursing and Midwifery, and meet academic entry requirements.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course. You will also be required to attend Burwood (Melbourne) campus or live via videoconference for distance students – refer to individual unit details in the course structure for more information.

## Career opportunities

The courses are attractive to nurses wishing to gain entry into specialist emergency care nursing practice and for nurses who may have preliminary skills and beginning knowledge of the area but wish to increase their knowledge and skill to plan a career in these chosen areas of specialty nursing practice.

## Clinical practice

Students normally are employed within a collaborating hospital for a minimum of 24 hours per week to support and provide a sound clinical learning environment for the clinical program requirements of the course. Where concurrent employment is not possible, clinical practicums may be negotiated.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate safe, high quality clinical advanced decision making and psychomotor skills commensurate with specialty emergency nursing theoretical knowledge, evidence-based practices and person-centred care.
Communication	Demonstrate proficient verbal, written and interpersonal communication skills using discipline-specific language and lay-terms necessary to assess and interpret data, convey ideas, develop plans of care and implement therapeutic interventions to ensure the delivery of high quality, safe emergency nursing care
Digital literacy	Use appropriate technologies to locate authoritative discipline-specific information and justify the selection of this information; and demonstrate the ability to proficiently evaluate, synthesise and disseminate the information to members of the multidisciplinary emergency care, and emergency department patients and their families in an ethical and professional manner.
Critical thinking	Identify, synthesise, analyse and critically evaluate complex data from patient and technologically-derived sources to inform advanced decision making that delivers safe, high quality emergency nursing care in order to promote optimal patient outcomes.
Problem solving	Proficiently apply specialised and advanced nursing knowledge and skills to routine, complex and ill-structured problems in emergency care settings to achieve optimal patient outcomes.
Self-management	Demonstrate personal autonomy, leadership, advanced clinical judgement, professionalism, responsibility, accountability, and reflection as a specialist emergency nurse.
Teamwork	Establish and maintain collaborative professional respectful relationships demonstrating professionalism, proficiency, open communication, leadership, responsibility and accountability to the multidisciplinary team, patients and carers.
Global citizenship	Display accountability for, and advanced professional judgement in, behaviours that uphold ethical and legal principles of practice within diverse social, cultural and environmental contexts.

<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is an exit point from H771 Master of Nursing Practice*

## Course overview

The Graduate Diploma course is designed to prepare nurses to meet the complex challenges within the speciality practice area of perioperative nursing and to progressively build upon knowledge and skills to explore the specific roles within perioperative nursing practice. The course responds to the demands of industry and partnership/collaborating hospitals by preparing nurses with sophisticated perioperative specialty skills and knowledge. The course continues knowledge development in speciality streams of intraoperative perioperative nursing and anaesthetic/post anaesthetic perioperative nursing.

The use of both campus based and Cloud (online) learning offers convenient, personalised and engaging learning experiences using the latest digital technologies. You will enjoy a rich, interactive, personal and empowering learning experience designed for postgraduate nurses.

A compulsory introductory four day program at Burwood (Melbourne) is normally held in the second week of February for students completing the certificate units.

On completion of the 6 core units and 2 elective units of the Graduate Diploma, students may elect to take an early exit from H771 Masters of Nursing Practice and graduate with a Graduate Diploma in Nursing Practice (Perioperative Care).

Students wishing to complete the Master of Nursing Practice by research and undertake the 4 credit point minor thesis must have completed HNN727 Research in Nursing and Midwifery, and must achieve a Distinction or above for 75% of the units undertaken in the Graduate Diploma of Nursing Practice specialty course.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course. You will also be required to attend Burwood (Melbourne) campus or live via videoconference for distance students – refer to individual unit details in the course structure for more information.

## Clinical practice

Students normally are employed within a collaborating hospital for a minimum of 24 hours per week to support and provide a sound clinical learning environment for the clinical program requirements of the course.

## Fees and charges

Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*NOTE: Students enrol in Cloud (online) however there are significant campus requirements at Burwood (Melbourne)*

## Course overview

Take your nursing career in a rewarding and new direction in midwifery.

The Graduate Diploma of Midwifery is designed for registered nurses seeking registration as a Midwife in Australia. The midwife plays an essential role in maternity care and is recognised as a responsible and accountable professional who works in partnership with women within the framework of 'woman-centered care'.

The midwife is a primary health care provider and undertakes health assessments throughout pregnancy, labour, birth and time after birth to ensure the health and wellbeing of women and their unborn/new born babies. This role includes referral and collaboration with other health care professionals as well as health promotion and education.

As a primary health care provider the midwife has an important role in health counselling and education, not only for the woman, but also within the family and the community. This involves antenatal education and preparation for parenthood and may extend to women's health, sexual or reproductive health and childcare. A midwife may practice in any setting including the home, community, hospitals, clinics or health units.

Areas of study covered include a review of the anatomy and physiology of human reproduction, pre-conceptual health, conception, embryology, foetal and placental development. Study areas also include anatomy and physiology of pregnancy, signs and symptoms of pregnancy; care of the woman during labour, birth and the time after birth; and complexities of maternal health such as gestational diabetes and hypertensive disorders and related pathophysiology. The care of the healthy newborn baby and the specific requirements of the baby born too early or an unwell full term baby are examined in reference to anatomy, physiology and pathophysiology.

You will typically be employed in a supervised part-time placement arrangement including a variety of maternity services settings of a collaborating hospital. These arrangements are designed to assist you in meeting all requirements of the Graduate Diploma of Midwifery as well as those of the Australian Health Professional Regulation Agency (AHPRA) of the Nursing and Midwifery Board of Australia (NMBA).

Employment opportunities for graduates have never been greater due to the current shortage of qualified midwives both locally and overseas. Throughout your course you will develop the relevant knowledge and skills to make you highly employable within the specialist field of midwifery.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals, online interaction and clinical placements. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

This course is recognised by AHPRA and accredited by the NMBA and the Australian Nursing and Midwifery Accreditation Council (ANMAC).

*Note: This course is currently accredited as at the date of publishing.*

## Career opportunities

The midwife is recognised as a responsible and accountable professional who works in partnership with women to give the necessary support, care and advice during pregnancy, labour and the postpartum period to conduct births and provide care for the newborn and the infant. The midwife has an important task in health counselling and education, not only for the woman, but also within the family and the community. This work involves antenatal education and preparation for parenthood and may extend to women's health, sexual or reproductive health and childcare. A midwife may practise in any setting, including the home, community, hospitals, clinics or health units.

## Participation requirements

Students are expected to participate in all timetabled learning experiences, online or at specified physical locations.

Classes are conducted at Burwood (Melbourne) and include online conference arrangements to those students residing outside of the metropolitan area. Online learning resources are used for independent study, class delivery and discussions. An intensive program is conducted at the Burwood Melbourne campus in mid-February and nominated 'study days' are conducted throughout each of the trimesters over the 18 months of the course. Students will typically be employed in a supervised part-time placement arrangement including a variety of maternity services settings of a collaborating hospital.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of placement will not be able to undertake placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

## Pathways

Graduates of this course may progress to further studies including higher degree by research or other postgraduate coursework programs.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Apply specialised knowledge and evidence-based practice, research, and scholarly activity to promote the delivery of contemporary midwifery practice and appraise directions in maternity services for all childbearing women.</p> <p>Practice in a safe and competent manner through the identification of issues and critically examine their impact upon maternal and foetal/infant health and wellbeing outcomes leading to advocacy, health promotion, and education for women, their families and the community.</p>
Communication	Apply advanced and effective communication strategies to inform and motivate women in appropriate self-care throughout all phases of childbearing including that of their foetus/ infant and to other health care professionals for referral and collaborative services
Digital literacy	Use digital technologies to locate, select, collect and curate information to generate and transmit solutions and support continuing professional development to inform practice and support the delivery of the best possible care for women and their families.
Critical thinking	Critically assess, plan, evaluate and interpret information to complete a range of activities to impact upon maternal and foetal/infant health and wellbeing outcomes leading to advocacy, health promotion, and education for women, their families and the community.
Problem solving	Initiate, plan and implement safe and effective midwifery care and practice knowledge through problem solving skills, critical thinking, decision-making and reflection on practice including risk management to ensure delivery of safe care for women and their foetus/infant.
Self-management	Use appropriate strategies to promote professional competence through critical reflection, accountability and feedback while engaging in life-long learning practices for the benefit of women, their families and the midwifery profession to ensure eligibility for continued registration for practice as a midwife.
Teamwork	Collaborate effectively as a member of a team with colleagues and other health care professionals to promote best practice and satisfactory outcomes for maternal and foetal/infant care.
Global citizenship	<p>Contribute to the midwifery discipline through continuing professional development, to promote safe and quality maternity care.</p> <p>Apply ethical and culturally safe decision making in the provision of woman centred care, including social, economic and ecologically sustainable considerations respectful of the diverse needs within the Australian community.</p>

## Course rules

To complete the Graduate Diploma of Midwifery students must attain 8 credit points comprising five core units equalling 6 credit points (these are compulsory) and 2 credit points of elective units (you can choose which ones to study).

Both the theoretical and clinical components of the assessment for each unit must be passed to successfully gain an overall pass in this course. Compulsory clinical hurdle requirements form part of the assessment of this course. Recognition of the importance of clinical assessments is calculated in the overall student workload.

*Note: Failure of a compulsory practicum in a unit will normally lead to exclusion.*

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Year 1

##### Trimester 1 (commencing February)

- HAI010 Academic Integrity (0 credit points)  
 HNM701 The Woman During Pregnancy, Labour and Birth \*  
 HNM702 The Woman and Newborn Infant \*

##### Trimester 2

- HNM703 Contexts of Midwifery Practice \*  
 HNM704 Clinical Challenges in Maternity Care \*

plus one elective unit

#### Year 2

##### Trimester 1

- HNM705 Clinical Challenges in Infant Care \*

plus one elective unit

\* Classes are conducted at Burwood (Melbourne) and include online conference arrangements to other venues. Online learning resources are used for independent study, class delivery and discussions.

### Elective units

The 2 credit points of elective units may be chosen from the following:

- HNN704 Clinical Leadership and Collaborative Practice (1 credit point)  
 HNN727 Research in Nursing and Midwifery (2 credit points)  
 HNN730 Advanced Health Assessment and Diagnostic Reasoning (1 credit point)  
 HNN749 Patient Safety and Risk Management (1 credit point)

Alternatively, students may select level 7 electives from other Schools within the Faculty of Health.

## Work experience

### Clinical Practicum

The Graduate Diploma of Midwifery has been designed to incorporate clinical learning opportunities and supervised part-time arrangements within a variety of maternity services settings. Students are usually employed within a collaborating hospital to support and provide a sound clinical learning environment for the clinical program requirements of the course. Where concurrent employment is not possible, clinical practicum may be negotiated. There are clinical hours that must be completed independently of the supervised employment component. Following successful completion of 8 credit points of study and all practice requirements of the course and for registration, students are eligible to apply to AHPRA, through the NMBA, for registration as a midwife.

For the Graduate Diploma of Midwifery (8 credit points), the theoretical and clinical components of the assessment for each unit must be passed in order to successfully gain an overall pass. Compulsory hurdle tasks form part of the assessment. Recognition of the importance of clinical assessments is calculated in the overall student workload. Failure of a compulsory practicum in a unit will normally lead to exclusion from the course.

## **Fees – CSPs**

CSPs are limited and are dependent on Government funding received by the University. Therefore a CSP is not guaranteed to all domestic students. It is usually given based on prior academic merit.

## **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Social Work

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Social Work
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode. Attendance at a minimum of 20 days of face to face time delivered during the two-year degree.
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2 years of full-time study or 4 years part-time study
<i>Deakin course code</i>	H703
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Study a progressive social work course with a strong emphasis on practical experience gained through practical placements.

Social work is concerned with enhancing the wellbeing of people in their social environments. Our Master of Social Work focuses on social and community development; race and gender issues; critical social work perspectives; equity, power and diversity issues; and anti-oppressive and empowerment approaches to social work practice and social policy.

This course is accredited by Australian Association of Social Workers (AASW), allowing you to enter the social work profession. The AASW recognises Deakin's social work program's commitment to 'critically reflective practice', which sets it apart from other social work programs in Australia. It also meets the Australian Social Work Education and Accreditation Standards (ASWEAS).

Fieldwork provides you with the opportunity to gain valuable skills and practical experience under the supervision of qualified social work practitioners. You will complete a minimum of 1000 hours of fieldwork placements conducted in a variety of communities and workplaces.

As a Deakin social work graduate, you will be eligible to apply for membership of the AASW and seek employment throughout Australia. The Master of Social Work creates a new pathway for entry into the profession and prepares graduates for a more advanced level of practice.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Attendance requirements

Students are required to attend a minimum of 20 days of face to face time delivered during the two-year degree. Dates for 2019 are listed on Deakin's website: [deakin.edu.au/students/faculties/faculty-of-health/school-of-health-and-social-development/course-info/master-of-social-work-attendance-requirements](http://deakin.edu.au/students/faculties/faculty-of-health/school-of-health-and-social-development/course-info/master-of-social-work-attendance-requirements).

## Professional recognition

The professionally qualifying Master of Social Work creates a new pathway for entry into the profession and prepares graduates for a more advanced level of practice. The Australian Association of Social Workers (AASW) has fully accredited the Master of Social Work. The AASW has also singled out Deakin for our 'critically reflective practice', setting us apart from other social work programs in Australia.

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the AASW retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Career opportunities

The two year Master of Social Work course is designed to provide a graduate level entry to educate students for critical, competent and effective professional social work practice both within the local social and community services industry and the broader national and international context. Graduates may find employment as a social worker, policy officer, researcher, community development worker, case manager, counsellor, human rights advocate, working with individuals, families, groups and communities in the health and human services sectors.

## Participation requirements

This course is only offered in Cloud (online) mode. As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

Attendance at a minimum of 20 days of face to face time delivered during the two-year degree.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course. Students are also required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

## Pathways

This course provides a pathway to higher degree by research courses.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Critically apply understanding of the histories, aims, values, ethics, theories and practice approaches of social work in contemporary Australian contexts, across all domains including working with individuals, families, groups, communities, management, research education and social policy.  Practice social work reflectively in line with the code of ethics and professional practice standards of the Australian Association of Social Workers.
Communication	Evaluate and apply appropriate communication and interpersonal skills in a broad range of social work practice contexts and with a diversity of people, communities and organisations.
Digital literacy	Use digital technology in social work practice ethically and appropriately, including service provision and management, information acquisition and dissemination, and research and evaluation.
Critical thinking	Critically analyse, synthesise and apply knowledge of social work theories, methods and skills to promote positive social change.  Engage in reflective and responsive practice that considers the social context, and the positioning of self and others.  Evaluate and apply knowledge and understanding of a range of research paradigms and methods to the design and conduct of research relevant to the practice and evaluation of social work.
Problem solving	Apply social work knowledge and intervention skills to appropriately and creatively respond to the needs of individuals, groups and communities in diverse settings, client groups and geographic locations.
Self-management	Demonstrate a sense of identity, integrity and self-management as a professional social worker in all areas of practice.
Teamwork	Work and learn respectfully and inclusively across diverse social, discipline, cultural and political contexts.
Global citizenship	Ability to evaluate and apply local and global knowledges social work practice to respond effectively within a human rights and social justice framework.

## Course rules

To complete the Master of Social Work students must attain 16 credit points. All units are core (these are compulsory).

Students must complete two practice education units as part of the core units, each involving a minimum of 500 hours (across at least 65 days) of practicum (field placement) in a social or community service agency or program.

Failure of a practice education placement in the Master of Social Work will normally lead to exclusion.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Inherent requirements

Students should also be aware of the inherent requirements of the course.

## Course structure

### Core units

Course structure applies for students who commenced in 2017 onwards. Students who commenced prior to 2015 should refer to previous online Handbooks or consult a student advisor.

### Level 1

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSW701 Australian Social Work in an International Context
- HSW702 Understanding Care and Risk
- HSW703 Becoming a Social Worker
- HSW705 Challenging Poverty and Social Exclusion

#### Trimester 2

- HSW714 Professional Practice in Social Work A (3 credit points)
- HSH725 Research Literacy for Health Practice

### Level 2

#### Trimester 1

- HSW707 Addressing Violence and Abuse
- HSW709 Practicing Social Work with Communities and Groups
- HSW711 Responding to Trauma, Grief and Loss
- HBS745 Collaborative Practice in Healthcare

#### Trimester 2

- HSW704 Reconstructing Professional Practice
- HSW715 Professional Practice in Social Work B (3 credit points)

## Work experience

### Practice education

Students must complete two practice education units, each involving a minimum of 500 hours (across at least 65 days) of practicum (field placement) in a social or community service agency or program. Students must also attend and participate in the associated pre-placement preparation seminars at Waterfront (Geelong) in the Trimester prior to the placement being undertaken – dates to be advised.

Recognition for Prior Learning (RPL) is possible for the first placement only (HSW714-Professional Practice in Social Work A) for students who are able to demonstrate that their prior work experience has provided them with the knowledge and experience that would normally be provided in the first placement. Applications for RPL are due 30th March of the year students are due to undertake their first placement. Late applications cannot be accepted.

Further information is available in the RPL Guidelines.

### Income support

Domestic students enrolled in this postgraduate coursework program may be eligible for student income support through Youth Allowance and Austudy. Further information can be found at Deakin University's Fees website.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Health Economics

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Health Economics
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a> This course structure applies to students that commenced the course in Trimester 2 2019 onwards. Students who commenced the course before Trimester 2 2019 should refer to the course entry in the 2018 handbook.
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1–2 years full time or part-time equivalent, depending recognition for Prior Learning.
<i>CRICOS course code</i>	085214E
<i>Deakin course code</i>	H704
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Are you a health professional or economist interested in furthering your knowledge of health economics in Australia and internationally? At Deakin, you will join the largest health economics team in Australia.

Get specialist training in the application of health economics to health policy, health technology assessment and the health care system.

Deakin's Master of Health Economics gives graduates from a range of areas – from nursing and pharmacy to business administration and health management and beyond – a strong theoretical foundation plus analytical and quantitative skills to understand the complexities of health care financing.

You will learn skills in health technology assessment, economic evaluation of health interventions, resource allocation and priority setting, healthcare financing, health systems research and the health economics/health policy interface.

You will also receive high-level training in modelling and health technology assessment. As a graduate, you will be able to critically evaluate current research in economic policy and economic evaluation of health services as well as participate effectively in health policy development and debate.

In addition to numerous career opportunities, you will have the opportunity to join Deakin's leading health economics academics and progress to a PhD at Deakin University.

## Indicative student workload

In the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

Not applicable

## Career opportunities

The MHE will prepare students for careers in: the government sector including the Productivity Commission; pharmaceutical and health technology industries; the non-government sector; the health insurance industry; and international organisations such as the World Health Organisation (WHO), the World Bank, the Asian Development Bank, and the United Nations Development Program (UNDP). In addition, it will provide students with the opportunity to progress to a PhD at Deakin University and pathways to a career in academia.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check or other check. Refer the relevant unit guide.

## Alternative exit points

There are two alternative exit points available from H704 Master of Health Economics:

- H504 Graduate Certificate of Health Economics consisting of 4 credit points
- H604 Graduate Diploma of Health Economics consisting of 8 credit points

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate knowledge of the implications of organisational structure, delivery and financing of healthcare services from an economic perspective, including implications for efficiency, equity and access.
Communication	Communicate health economic issues to specialist and non-specialist audiences using written reports, oral presentation and digital communication, including: <ul style="list-style-type: none"> <li>• health systems analysis, methods and results of economic appraisal and priority setting exercises;</li> <li>• demand and supply of health care;</li> <li>• rationale for government intervention;</li> <li>• socioeconomic influences on health; and</li> <li>• technology assessment.</li> </ul>
Digital literacy	Critically evaluate available digital sources of health and health systems data, for systematic reviews, economic modelling and health policy and priority setting recommendations.
Critical thinking	Critically evaluate applied economic and conceptual frameworks used in health economics to analyse the effects of political, social and economic policies on health systems and community health, and apply analytic methods including evidence-based research, cost-effectiveness, and decision analyses to inform resource allocation and policy initiatives.
Problem solving	Independently analyse contemporary health problems from an economic perspective and formulate options for health system reform.

Graduate learning outcomes	Course learning outcomes
Self-management	Demonstrate effective self-management skills, autonomy and accountability that contribute to the development of lifelong learning and professionalism in the area of health economics.
Teamwork	Demonstrate knowledge of their role as a health economist to work effectively within health economics and multidisciplinary teams.
Global citizenship	Apply the principles of health economics, evidence-based economic evaluation and priority setting to problems in global health and the strengthening of health systems.

## Course rules

To complete the Master of Health Economics students must attain 16 credit points. Most units are equal to 1 credit point – check each unit in the course structure.

The 16 units must comprise:

- 8 core units (equal to 8 credit points) (These are compulsory)
- If completing Minor Project Option, students must complete 6 electives units.
- If completing Major Project Option, students must complete 4 electives units.

Students would normally complete the Master of Health Economics over 4 trimesters of full-time study or the part-time equivalent. As some students will be in full-time work, part-time enrolment will mean that these students will complete the course in three to four years.

Students may enrol in the course in either Trimester 1 or 2. It is recommended that students take the minor or major project in their last one or two trimesters.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

All students must complete the following seven core units and one zero credit point unit:

HAI010	Academic Integrity (0 credit points)
HSH717	Health Economics 1
HSH719	Economic Evaluation 1
HSH746	Biostatistics 1
HSH761	Health Technology Assessment 1
HSH762	Resource Allocation and Priority Setting
HSH764	Economic Evaluation – Theory and Practice
MPE781	Economics for Managers
HSH744	Epidemiology 1

## Elective units

Students must complete a minor or major project option:

### *Minor project option*

- HSH731 Minor Project A (1 credit point)  
HSH732 Minor Project B (1 credit point)

Plus six elective units from the list of elective units below:

### *Major Project Option (for students with a Weighted Average Mark (WAM) 70%\*)*

- HSH733 Major Project A (2 credit points)  
HSH734 Major Project B (2 credit points)

\* WAM applies to core units

Plus four elective units from the list of elective units below:

- HSH768 Health Economics in a Global Context  
HSH763 Financing Health Care  
HSH765 Health Technology Assessment 2  
HSH767 Economic Modelling  
HSH766 Economics and Health Policy Analysis  
HSH747 Biostatistics 2  
HSH739 Global Health Policy and Planning  
HSH769 Comparative Health Systems  
HSH754 Epidemiology 2

Other electives may be approved on an individual basis. Course Director approval is required.

## Work experience

HSH760 International Perspectives on Health and Social Development.

Limited places are allocated based on an interview process and academic merit.

## Income support

Domestic students enrolled in this postgraduate coursework program may be eligible for student income support through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

- Research related study (minimum of 4 credit points)
- Independent research (minimum 2 credit points)

# Master of Child Play Therapy

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Child Play Therapy
<i>Campus</i>	Cloud (online) mode, however there are significant placement and campus requirements
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent.
<i>Deakin course code</i>	H705
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*This course is offered to continuing students only. Students that commenced in 2019 should go to the Master of Child Play Therapy*

## Course overview

Develop your interpersonal, creative and expressive skills to work effectively with children and their families as a child play therapist.

Child play therapy is a growing specialist area within the mental health and early childhood sectors. It is an evidence-based profession in which play is used to transform children's lives when they have experienced abuse or trauma, have a developmental disorder, or are experiencing a mental health issue.

This two year Master degree provides specialist training for students with relevant prior experience and qualifications. The orientation of the course is primarily Humanistic but other approaches will be presented in the course materials. Placement units are an important component of the program.

You will be eligible to apply to become a registered play therapist with the Australasia Pacific Play Therapy Association (APPTA). This course is primarily delivered online with occasional intensive study sessions.

Study the first play therapy course offered by an Australian university and make a significant difference in the lives of children, young people and their families.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each credit point in your course. There are also significant placement and campus requirements.

Students are required to attend intensive workshops for several units in the Master of Child Play Therapy and Graduate Diploma of Therapeutic Child Play. Dates for 2019 are listed on Deakin's website.

## Professional recognition

Graduates will be eligible to apply to become a Registered Play Therapist with the Australasia Pacific Play Therapy Association (APPTA).

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the relevant professional body retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Career opportunities

Graduates will be eligible to work in professional healthcare teams, in individual private practice, and in a range of health, education and community contexts.

## Participation requirements

The course involves a compulsory clinical placement of 250 hours in a professional placement there are 70 hours of online clinical supervision. The placements may be undertaken in your local area.

Compulsory attendance of 12 days is required over the course which is broken into three on campus intensive placement workshops. 1 x 4 days in year 1 Trimester 2, 1 x 5 days in year 2 trimester 1 and 1 x 3 days in year 2 Trimester 2.

Placement can occur at any time, including during standard holiday breaks. See Deakin's website for further details.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs.

Students who complete H605 Graduate Diploma of Therapeutic Child Play will be guaranteed a place in the course and receive 8 credit points of credit.

## Alternative exits

H505, H605.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply an advanced and integrated theoretical and practical knowledge of the principles underlying Child Play Therapy and the processes involved in therapeutic practice.
Communication	Demonstrate verbal, written and interpersonal communication necessary to interpret theoretical positions, convey ideas, proposals and findings, pertaining to Child Play Therapy, to a specialist and non-specialists audiences.
Digital literacy	Use appropriate technologies to locate credible discipline-specific information and disseminate this information to specialist and other professional groups in an ethical and professional manner.
Critical thinking	Analyse, critically evaluate and synthesize complex cases, problems, concepts and theories in the field of Child Play Therapy.
Problem solving	Apply advanced knowledge and skills to and select appropriate therapeutic approach(s) and modify treatment plans as required to solve a range of problems within the field of Child Play Therapy.
Self-management	Demonstrate personal autonomy and expert professional judgement in the field of Child Play Therapy showing responsibility and accountability, in conjunction with reflective practice.
Teamwork	Establish and maintain collaborative professional relationships demonstrating responsibility and accountability to the child, family, carers, multidisciplinary professionals and other relevant stakeholders.
Global citizenship	Demonstrate professional and ethical practice and respect for diverse social, cultural and environmental contexts, and an awareness of international developments in Child Play Therapy

## Course rules

To complete the Master of Child Play Therapy students must attain 16 credit points. Units may be worth 1 or 2 credit points – check each unit for its credit point value in the course structure below. 15 credit points are core (these are compulsory) plus 1 elective credit point (you can choose which one to study from the list provided) in Year 1 Trimester 2.

Students may exit the course after completing a specified sequence of 4 units for the award H505 Graduate Certificate of Therapeutic Child Play, or after completing the specified sequence of 8 units for the award H605 Graduate Diploma of Therapeutic Child Play.

## Course structure

### Core units

#### Year 1

##### Trimester 1

- HSO710 Foundations of Play Therapy (Start Anytime)
- HSO711 Child Attachment Environment and Trauma
- HSO713 Assessment and Measurement in Play Abilities
- HSO715 Childhood Developmental Neuroscience and Psychopathology

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each credit point in your course. There are also significant placement and campus requirements.

Students are required to attend intensive workshops at the Geelong Waterfront Campus for several units in the Master of Child Play Therapy and Graduate Diploma of Therapeutic Child Play. Dates for 2019 are listed on Deakin's website.

## Professional recognition

Graduates will be eligible to apply to become a Registered Play Therapist with the Australasia Pacific Play Therapy Association (APPTA).

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the relevant professional body retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Career opportunities

Graduates will be eligible to work in professional healthcare teams, in individual private practice, and in a range of health, education and community contexts.

## Participation requirements

The course involves a compulsory clinical placement of 250 hours in a professional placement there are 70 hours of online clinical supervision. The placements may be undertaken in your local area.

Compulsory attendance of 12 days is required over the course which is broken into three on campus intensive placement workshops. 1 x 4 days in year 1 Trimester 2, 1 x 5 days in year 2 trimester 1 and 1 x 3 days in year 2 Trimester 2.

Placement can occur at any time, including during standard holiday breaks. See Deakin's website for further details.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs.

Students who complete H605 Graduate Diploma of Therapeutic Child Play will be guaranteed a place in the course and receive 8 credit points of credit.

## Alternative exits

H605, H505.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply an advanced and integrated theoretical and practical knowledge of the principles underlying Child Play Therapy and the processes involved in therapeutic practice.
Communication	Demonstrate verbal, written and interpersonal communication necessary to interpret theoretical positions, convey ideas, proposals and findings, pertaining to Child Play Therapy, to a specialist and non-specialists audiences.
Digital literacy	Use appropriate technologies to locate credible discipline-specific information and disseminate this information to specialist and other professional groups in an ethical and professional manner.
Critical thinking	Analyse, critically evaluate and synthesize complex cases, problems, concepts and theories in the field of Child Play Therapy.
Problem solving	Apply advanced knowledge and skills to and select appropriate therapeutic approach(s) and modify treatment plans as required to solve a range of problems within the field of Child Play Therapy.
Self-management	Demonstrate personal autonomy and expert professional judgement in the field of Child Play Therapy showing responsibility and accountability, in conjunction with reflective practice.
Teamwork	Establish and maintain collaborative professional relationships demonstrating responsibility and accountability to the child, family, carers, multidisciplinary professionals and other relevant stakeholders.
Global citizenship	Demonstrate professional and ethical practice and respect for diverse social, cultural and environmental contexts, and an awareness of international developments in Child Play Therapy

## Course rules

To complete the Master of Child Play Therapy students must attain 12 credit points. Units may be worth 1 or 2 credit points – check each unit for its credit point value in the course structure below. 10 credit points are core (these are compulsory) plus 2 elective credit point (you can choose which one to study from the list provided) in Year 1 Trimester 2.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students may exit the course after completing a specified sequence of 4 units for the award H505 Graduate Certificate of Therapeutic Child Play, or after completing the specified sequence of 8 units for the award H605 Graduate Diploma of Therapeutic Child Play.

## Course structure

### Core units

#### Year 1

##### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSO710 Foundations of Play Therapy (Start Anytime)\*
- HSO711 Child Attachment Environment and Trauma \*
- HSO713 Assessment and Measurement in Play Abilities \*
- HSO715 Childhood Developmental Neuroscience and Psychopathology \*

##### Trimester 2

- HSO709 Therapeutic Use of Self
- HSO712 Engaging Children in Play Using Directive Approaches

and two 1CP elective units or one 2CP elective unit

#### Year 2

##### Trimester 1

- HSO720 Humanistic Play Therapy

##### Trimester 2

- HSO723 Systemic Play Therapy
- HSO717 Professional Practice and Behaviour

\* must complete prerequisite for HSO712 and HSO724

### Elective units

Select two 1 credit point elective units

- HSH725 Research Literacy for Health Practice ^

and

- ALL743 Foundations in Narrative Theory
- HPS772 Child and Adolescent Development
- HDS732 Determinants of Health and Wellbeing in the Lives of People with Disability
- ECP712 Social, Physical and Emotional Health and Wellbeing

OR

Select one 2 credit point elective unit

- HSO724 Play Therapy Research Thesis \*\*

^ must select a research pathway of either HSH725 and one other elective or HSO724 (i.e. must complete at least one research unit)

\*\* must complete if student wishes to undertake HDR minimum entry requirement and must attain >70% grade.

## Work experience

There are clinical placements throughout the course – see individual unit descriptions for full details.

## Income support

Domestic students enrolled in this postgraduate coursework program may be eligible for student income support through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Applied Sport Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Applied Sport Science
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode with on campus intensives
<i>Cloud Campus</i>	Yes
<i>Duration</i>	<ul style="list-style-type: none"> <li>• Trimester 1 commencing students: 1 year over 3 consecutive trimesters, or part-time equivalent</li> <li>• Trimester 2 commencing students: 1.5 years over 5 consecutive trimesters, or part-time equivalent</li> <li>• Trimester 3 commencing students: 1.5 years over 4 consecutive trimesters, or part-time equivalent</li> </ul>
<i>Deakin course code</i>	H707
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

The Master of Applied Sport Science is designed to meet the need for high level sport scientists employed in professional and semi-professional sport and at various institutes of sport. The course is intended to build on prior knowledge and expertise gained through prior formal education and experience. This will provide appropriate professional development to underpin career advancement to senior sport scientist positions or transitioning into a sport science research environment.

Graduates will be equipped with the skills necessary to function with a high degree of autonomy, and the knowledge required to implement new initiatives designed to enhance the performance of elite athletes. Master's graduates will have the skills needed to evaluate such initiatives. Graduates will demonstrate a conceptual understanding that enables the student to critically evaluate current research in Sport Science as well as be able to apply their skills to make a contribution to research in Sport Science.

Graduates will have advanced and integrated knowledge and understanding of sport science. The core units developed specifically for this course will provide a framework by which graduates will develop the skills necessary to integrate the knowledge gained to solve complex and authentic problems drawn from real professional experiences. Assessments will have a strong link to professional practice and emulate work-relevant tasks.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend at least 11–13 hours per unit every week participating in a range of teaching activities each week. This could include classes, seminars, practicals, placements and online interaction via CloudDeakin. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time. Teaching, placements and assessment tasks may take place outside of Deakin University teaching periods.

## Professional recognition

To become an Accredited Sport Scientist (ASpS) with Exercise and Sport Science Australia (ESSA), graduates need to be able to meet the ESSA ASpS requirements. Please refer to the ESSA website for more information.

Students may also be eligible to meet the requirements of The International Society of Performance Analysis in Sport as a level 1 Accredited Performance Analyst. Please refer to the ISPAS website for more information.

Students will need to contact the organisation/s to enquire about their application requirements and process.

## Career opportunities

- Sport science related roles (e.g. strength and conditioning, performance analysis) in sports institutes and academies, professional sports teams, and national sporting organisations.
- Coaching and management roles in private, performance-based, gyms.
- Higher Degree by Research (with appropriate electives)

## Participation requirements

HSE720, HSE721, HSE724 and HSE725 require attendance at a week-long intensive on the Waurin Ponds (Geelong) campus.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check at the comm or other check. Refer the relevant unit guide.

## Pathways

Students completing the appropriate elective (HSE729) with the appropriate grade (>70%) will be eligible for entry into higher degree by research (i.e., PhD) studies.

## Alternative exits

There are two alternative exit points available from H707 Master of Applied Sport Science:

- H507 Graduate Certificate of Applied Sport Science consisting of 4 credit points
- H607 Graduate Diploma of Applied Sport Science consisting of 8 credit points

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply expert and integrated knowledge of sport science to sport performance related problems and contribute to the development of new knowledge through use of appropriate research principles and methods of sport sciences.
Communication	Use appropriate modes of communication to interpret, contextualize and transmit evidence based sport science knowledge to specialist and non- specialist audiences. Create, disseminate, and exchange sport science knowledge with a view to inform and effect change at the individual and organisational level.
Digital literacy	Use digital technologies to effectively locate, use, curate and disseminate information and resources relevant to sport science and to connect, engage and share with professional networks and communities.
Critical thinking	Critically analyse, reflect on and synthesise complex information, problems, concepts and theories in sport science.
Problem solving	Investigate complex sports science problems and respond effectively using an evidence-based framework and a range of sources to identify and define problems, locate, analyse and organise information, and generate and evaluate practical solutions, contributing new insights or understanding.
Self-management	Employ high level personal responsibility, accountability and autonomy to demonstrate expert judgement, adaptability to new situations and responsibility as a sport scientist. Plan, implement, evaluate and continually adapt strategies to learn and work effectively, autonomously and responsibly.
Teamwork	Establish, contribute to and maintain a key role in collaborative and interdisciplinary relationships, with a range of stakeholders to achieve successful outcomes to advance sport sciences across the broad spectrum of contexts.
Global citizenship	Engage in professional and ethical practice that demonstrates a high level of personal autonomy, awareness of, and adaptability to, diverse social, cultural and environmental contexts in sport sciences.

## Course rules

To complete the Master of Applied Sport Science students must attain 12 credit points.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Year 1

##### Trimester 1

HAI010	Academic Integrity (0 credit points)
HSE720	Athlete and Program Development in High Performance Sport
HSE722	The Scientific Process for Sports Scientists
HSE724	Strength and Conditioning Methods for Athletes ^
HSE726	Sport Performance Analysis

##### Trimester 2

HSE723	Data Analysis and Program Evaluation for Sports Scientists +
HSE727	Advanced Sport Performance Analysis +
HSE728	Applied Sport Science Project – Part 1

##### Trimester 3

HSE721	High Performance Management in Sport ^
HSE725	Factors Influencing Training Design for Sport ^+

##### Plus

HSE729	Applied Sport Science Project – Part 2 *+
--------	---

##### Or

HSE730	Professional Practice *+
--------	--------------------------

\* Students will be able to undertake the research pathway with HSE728 and HSE729 OR the professional pathway with HSE728 and HSE730.

^ Unit with oncampus intensive activities delivered at Geelong Waurin Ponds.

+ Unit has prerequisite unit/s

## Work experience

### Work integrated learning

For those enrolled in HSE730 Professional Practice a minimum of 220 hours of practical experience in an exercise and sport science work practicum in the final trimester is required.

You have the opportunity to undertake hands-on experience in a variety of sporting environments. These may vary from local, state or national sporting organisations, elite and semi-elite sporting clubs and state and national institutes of sport. The roles can involve sport science, performance analyst, strength and conditioning, and high performance sport management.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Disability and Inclusion

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Disability and Inclusion
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years part time
<i>Deakin course code</i>	H709
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Deakin's Master of Disability and Inclusion equips students with the academic knowledge they need to pursue professional work or research in the disability, health and community sectors.

The course will help students form a distinctive and contemporary understanding of disability. Drawing on research informed by disability and inclusion theory and practice and the lived experiences of people with disability, the Master of Disability and Inclusion gives students the opportunity to develop knowledge and skills in inclusive approaches to their work and research.

Our Master (/Graduate Certificate) of Disability and Inclusion has strong links to industry, facilitated by our thought-leading Disability and Inclusion Advisory Board made up of prominent industry leaders and Deakin academics.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 150 hours of learning and assessment activities for each credit point, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

Not applicable

## Career opportunities

The Master of Disability and Inclusion is designed to meet specialist education, training and research needs in the disability, human service and community workforce nationally and internationally.

This course will prepare learners for employment in disability, health, human service and community sectors. In particular, the course will prepare learners for new positions that have been developed in the disability and community sectors in more senior roles in policy, practice leadership and research as part of the full rollout of the NDIS in Australia. In addition, it will prepare students for employment outside of Australia in roles focused on contemporary rights based disability policy and practice.

The course aligns well with areas of knowledge and skills identified in the position descriptions for Local Area Coordinators in the National Disability Insurance Agency (NDIA):

- knowledge of disability systems including disability research, legislation and policy;
- high level communication skills for working with people with disability and their families;
- self-directed approaches to service planning; and
- community capacity building knowledge and skills.

These skills are also aligned with mid-level and senior positions in the health, human service and community service sector where the development of services that are inclusive of people with disability is an increasing societal and legislative expectation, both within Australia and internationally. Graduates of the Master of Disability and Inclusion may also be employed in higher education as research assistants and those completing the 12 credit point Masters could have a pathway to a PhD.

These skills will be developed through the delivery of course content and assessments that will prepare learners for employment, via the use of authentic assessment.

## Participation requirements

Not applicable

## Mandatory student checks

There are no mandatory student checks required for this course.

## Pathways

The 12 credit point Masters is a pathway into a PhD in Disability and Inclusion.

## Alternate exits

Students can enter and exit the Master of Disability and Inclusion (H709) via the Graduate Certificate of Disability and Inclusion (H508) and the Graduate Diploma of Disability and Inclusion (H608). Graduate Diploma of Disability and Inclusion (H608) is an exit point only.

- Graduate Certificate of Disability and Inclusion (H508)
- Graduate Diploma of Disability and Inclusion (H608)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply expert knowledge and research skills in the area of Disability and Inclusion that includes application of theory and evidence-based approaches to policy, participation and social inclusion of people with Disabilities.
Communication	Communicate using a range of modes, theoretical positions, methodologies and professional decisions on Disability and Inclusion in an effective manner, being mindful of the target audience.
Digital literacy	Use digital technologies to source, use and disseminate ideas, information and research findings relevant to Disability and Inclusion to a range of audiences including people with disability.
Critical thinking	Use specialised knowledge to critically analyse and synthesise complex information related to policy, theory and research in the area of Disability and Inclusion.
Problem solving	Apply specialised research and cognitive skills to find evidence-based solutions to complex policy related problems in the area of Disability and Inclusion.

Graduate learning outcomes	Course learning outcomes
Self-management	Plan and execute a substantial research based project in the area of Disability and Inclusion and demonstrate expert judgement and responsibility as a practitioner or learner.
Teamwork	Contribute to the productive functioning of a multi-skilled team working in the area of policy, research and advocacy for people with disability.
Global citizenship	Demonstrate a high level of awareness and respect for diversity in line with contemporary human rights obligations and apply ethical and inclusive approaches to disability research and practice.

## Course rules

To complete the Master of Disability and Inclusion students must complete 12 credit points comprising 6 core units (1 credit point each), 2 electives (1 credit point each), and a 4 credit point Major Project (comprising Major Project A – 2 credit points and Major Project B – 2 credit points) OR students who enter via the Graduate Certificate of Disability and Inclusion (or equivalent) will only need to complete the remaining 8 credit points comprising 6 core units (1 credit point each) and 2 electives (1 credit point each).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

All students must complete the following eight core units and one zero credit point unit:

HAI010	Academic Integrity (0 credit points)
HDS730	Disability and Inclusion: Contemporary Theory and Lived Experience
HDS731	Planning for Inclusion Across the Life Course
HDS732	Determinants of Health and Wellbeing in the Lives of People with Disability
HDS733	Community Capacity Building – Theory and Practice for Inclusion
HDS736	Disability Research – Inclusive Approaches
HDS734	Inclusive Design and Technology
HSH733	Major Project A
HSH734	Major Project B

### Elective units

Students must also complete two electives from the following list:

One of the following:

HSH702	Contemporary Health Issues and Policies
ADS701	Introduction to International and Community Development
EXE732	Social Justice and Difference
HSH725	Research Literacy for Health Practice
HSH760	International Perspectives in Health and Social Development

## Work experience

Not applicable

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Optometry

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Optometry
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurm Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	1.5 years accelerated full time program delivered over four consecutive trimesters commencing in Trimester 1
<i>Deakin course code</i>	H710
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Develop the knowledge and attributes required to practise as an optometrist within Australia and New Zealand.

This course gives lets you build upon the knowledge and applied skills acquired throughout the Bachelor of Vision Science (or equivalent). Throughout this course, you will continue to develop an understanding of optometric clinical assessment and procedures; ethical, legal and professional standards of practice; and acquire high levels of inter-personal and inter-professional communication and commercial awareness.

You will develop and refine skills in patient-centred care and evidence-based practice, enabling you to practise as a professional in this field.

Clinical placements are an integral part of Deakin's optometry program. You will undertake a variety of short-term industry placements during the Master of Optometry and spend the final six months of the course as a 'student resident' in a range of clinical optometric and medical settings.

These extensive clinical rotations will enable you to consolidate your skills under the supervision of qualified optometrists. Clinical rotations will include time in both metropolitan and regional or rural settings.

As a Deakin optometry student, you have access to cutting-edge facilities within the new, purpose-built Regional Community Health Hub (REACH).

## Work-Integrated Learning

Clinical placements are an integral part of Deakin's optometry program. You will undertake a variety of short-term industry placements during the Master of Optometry and spend the final six months of the course as a 'student resident' in a range of clinical optometric and medical settings. These extensive clinical rotations will enable you to consolidate your knowledge and skills in supported environments under the supervision of qualified optometrists.

Clinical rotations will include time in both metropolitan and regional or rural settings.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time. There are significant placement and campus requirements.

## Professional recognition

Students who successfully complete H710 Master of Optometry can apply for registration to practise as an optometrist in Australia. Completion of the Bachelor of Vision Science alone does not meet the registration requirements for professional practice as an optometrist and must be completed in combination with Deakin's Master of Optometry (or equivalent program).

Students who successfully complete the Master of Optometry can apply for registration to practise as an optometrist in Australia. Deakin Optometry has been awarded 'accreditation with conditions' by the Optometry Board of Australia, following assessment by the Optometry Council of Australia and New Zealand (OCANZ). Graduates of the Master of Optometry will therefore be eligible to apply for registration with the Australian Health Practitioner Regulation Agency (AHPRA), and to Medicare as service providers, making them able to pursue employment opportunities throughout Australia and New Zealand.

*Note: This course is currently accredited with conditions as at the date of publishing.*

## Career opportunities

Optometrists are primary eye care practitioners who are involved in assessing the health and function of the eyes and visual system and the diagnosis and management of a wide range of ocular conditions. Optometrists work in a variety of health care settings, with the great majority working in a private practice environment – which itself can be very diverse. On a given day, an Australian optometrist may perform a primary visual assessment, manage a newly identified eye disease, prescribe a prescription medicine, or prescribe, fit and dispense optical aids. At the same time, many optometrists are business owners and retailers.

Some optometrists use their qualification to engage in other employment opportunities, such as research, other para-medical practice and work within vision-related non-government organisations.

Following successful completion of the Deakin Bachelor of Vision Science/Master of Optometry, Deakin graduates are well prepared for employment in a diverse range of work settings including, but not limited to: hospitals, clinics, health services, state and local governments, non-government organisations, research institutes, tertiary education institutions, private practice, and corporate and community settings. Career and employment opportunities for qualified optometrists include private and public eye care, practice ownership, research and teaching, other ophthalmic practices, and recognised specialties within optometry such as low vision, paediatric vision, and behavioural optometry.

## Participation requirements

The course has been developed to provide students with opportunities to practice optometry (under supervision) in a variety of contexts. In keeping the Deakin Optometry's commitment to improving rural eyecare delivery, students will spend at least 1.2 of their extended residential placement in a regional, rural or remote location to develop a deeper understanding of the challenges faced by these communities when attempting to access eye care.

## Mandatory student checks

### Requirements for Clinical Placements and Registration

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

Several clinical placement agencies require that students are vaccinated/blood tested before undertaking clinical placement and/or graduate employment. Deakin University Medical Centres provides detailed advice, blood testing and administer all necessary vaccinations prior to commencement of clinical placements and/or employment.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs.

## Additional costs associated with the course

Students will be expected to purchase some specialist equipment during their course, and there may be some additional costs associated with your clinical placements. Further details will be provided during your enrolment. Students should expect to spend around \$5,000 (\$1,500 and \$4,000) on equipment. Life expectancy of the equipment is around 15 years.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply advanced integrated optometric knowledge to evaluate clinical information, utilising expert skills and judgement to independently perform optometric examinations, establish diagnoses and design appropriate management plans within a robust practice management system.
Communication	<p>Employs a range of communication strategies to interpret theoretical positions, methodologies and conclusions, and explain and justify professional and clinical decisions to other health professionals, peers and colleagues (specialist and non-specialist audiences).</p> <p>Employs a range of communication strategies that take into account individual diversity to effectively communicate information regarding informed consent, diagnoses and management plans to patients, carers and other health-care professionals.</p>
Digital literacy	Choose appropriate technologies to effectively find, use and disseminate clinical and research findings; demonstrate skills in applying new technologies in clinical settings to implement examination plans and manage patient records.

Graduate learning outcomes	Course learning outcomes
Critical thinking	Apply an advanced body of knowledge in order to solve optometric problems and address research questions and new situations in professional practice in a flexible, analytical and independent manner.  Apply business and practice management skills to develop and maintain a safe and efficient/compliant optometric practice
Problem solving	Apply an advanced body of knowledge in order to define and frame clinical optometric problems and apply evidence based strategies to solve such problems.  Apply business and practice management skills to identify areas of optometric business in need of improvement and strategies to improved and maintain a safe and efficient/compliant optometric practice.
Self-management	Operate in a professional, reflective and ethical manner, being cognisant of the accountability and responsibilities that come with professional optometric practice, thereby employing a structured and efficient approach to professional practice.
Teamwork	Operate as an independent optometric professional, capable of demonstrating leadership in practice management and collaboration with other health professionals in providing high quality optometric care for patients.
Global citizenship	Model behaviour consistent with professional and ethical standards of the profession, being sensitive to cultural and social diversity and the issues impacting on eye and vision care in regional and rural communities, adopting a global perspective to evidence-based practice and advocacy.

## Course rules

To complete the Master of Optometry students must attain 16 credit points completed over four consecutive trimesters. All the units in the course are core (these are compulsory) and each unit is worth 4 credit points. Graduates of H310 Bachelor of Vision Science are eligible to articulate directly into this course.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Cloud Campus</i>	Yes
<i>Duration</i>	Depending on your professional experience and previous qualifications, the Master of Human Nutrition is typically 1 or 1.5 years duration. <ul style="list-style-type: none"> <li>• 1 year full time (2 years part time) – 8 credit points</li> <li>• 1.5 years full time (3 years part time) – 12 credit points</li> </ul> Deakin courses can also be studied part time over a longer period.
<i>Deakin course code</i>	H714
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Learn the skills to work effectively as a nutritionist in a range of employment settings.

Deakin's Master of Human Nutrition draws content from related disciplines such as food science, biochemistry, physiology, epidemiology, psychology, sociology and politics and policy.

In this course, you will develop an advanced understanding of the role of nutrition and diet in the health of individuals and the population. You will also learn about the biological, social and policy related aspects of human nutrition along with skills to evaluate the findings of human nutrition studies and undertaking research.

This course also provides you with the opportunity to undertake a diverse range of elective study options, giving you the ability to pursue topic areas that align with your interests and career aspirations. Students looking to pursue a specific nutrition career pathway should first visit the School of Exercise and Nutrition Sciences' Careers website to ensure the elective units they select will meet their career development needs.

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

Growing public interest in the relationship between diet and health is evident and, as a result, there are increasing demands from the public for reliable and trustworthy information. In response, the Nutrition Society of Australia (NSA) has developed a 'Register of Nutritionists' to establish a list of appropriately qualified nutrition professionals.

As a graduate of this course, you may be eligible for registration as an 'Associate Nutritionist'. Following three years of relevant work experience, Associate Nutritionists are able to apply for 'Registered Nutritionist' status. Registration with NSA does not authorise registrants to obtain provider numbers with Medicare or Private Health Insurers. Please refer to the Nutrition Society of Australia website for further information or queries about registration.

## Career opportunities

Graduates will be equipped to find careers as a nutritionist, nutrition promotion officer and nutrition consultant.

Graduates can expect to gain employment in a wide range of organisations such as food industry, state or local government community settings, state and federal health departments, NGOs with a nutrition focus, media or the corporate sector.

## Participation requirements

Students are required to complete core units in Trimester 3 of the course

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Applicable only to students undertaking practicum units, who will therefore require a working with children check. Not mandatory for all students.

## Pathways

Students who wish to undertake a PhD in the future are recommended to complete units HSN715, HSN719, HSN750 and HSN751.

## Alternative exits

- Graduate Certificate of Human Nutrition (H511)
- Graduate Diploma of Human Nutrition (H616)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply advanced and integrated knowledge of nutrition and health to nutrition related health problems.
Communication	Select and use appropriate modes of communication to obtain and share evidence based nutrition knowledge.
Digital literacy	Select and use appropriate technologies to analyse and synthesise complex nutrition information and problems, and to interpret and share knowledge, skills and ideas.
Critical thinking	Critically analyse, reflect on and synthesise complex information and problems in nutrition, to come to well-reasoned conclusions.
Problem solving	Apply best practice and evidence to identify problems and generate and evaluate practical solutions to complex nutrition issues.

Graduate learning outcomes	Course learning outcomes
Self-management	Employ high level personal responsibility, accountability and autonomy to demonstrate expert judgement, adaptability to new situations, effective work practices, and responsibility as a nutritionist.
Teamwork	Establish, contribute and maintain a key role in relationships with a range of stakeholders to achieve successful outcomes to advance nutrition sciences.
Global citizenship	Engage in professional and ethical practice that demonstrates a high level of personal autonomy, within diverse contexts in nutrition sciences.

## Course rules

The Master of Human Nutrition is typically 8 or 12 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

To complete the Master of Human Nutrition students must attain 12 credit points comprising:

- 6 core units (these are compulsory) worth 1 credit point each

Plus choose one of the following options:

### Research Based Project Option A

- HSN753 Research Practice in Human Nutrition and \*5 elective units

OR

### Research Based Project Option B (Research focus)

- HSN750 Nutrition Research Project Part A (2 credit points) and HSN751 Nutrition Research Project Part B (2 credit points) and \*2 elective units

\* Up to 2 elective credit points may be chosen from postgraduate units offered by any faculty of the University (subject to unit rules and approval by the Course Director).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

This course structure applies to students who commenced the course from 2019 onwards.

Students who completed an undergraduate degree from a non-cognate undergraduate study area (e.g. Arts, Commerce, Business, any non-health/science study areas, etc) must complete either H511 Graduate Certificate of Human Nutrition or H616 Graduate Diploma of Human Nutrition first before enrolling into H714 Master of Human Nutrition.

Students who have completed H511 will receive Recognition of Prior Learning for the 4 credit points already completed in H511 and then complete 8 credit points in the H714 course.

Students who completed H616 will receive Recognition of Prior Learning for the 8 credit points already completed in H616 and then complete 4 credits points in the H714 course.

Students who completed an undergraduate degree from a cognate study area may be granted preclusions for the units they have completed in their undergraduate course.

Preclusions mean that you are not required to undertake the specific units within the Masters course but you will need to choose another HSN7xx electives instead.

For example: H315 Bachelor of Nutrition Sciences student has completed HSN211 Nutritional Physiology, they can be precluded from HSN701 Principles of Nutrition and they will need to choose another HSN7XX unit to replace HSN701.

Students must enrol in the Cloud offerings of all units.

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSN701 Principles of Nutrition (also available in Trimester 3)
- HSN749 Biochemistry and Physiology for Human Nutrition

#### Trimester 2

- HSN702 Lifespan Nutrition
- HSN715 Understanding Human Nutrition Research Studies
- HSN735 Essentials of Food Science

#### Trimester 3

- HSN719 Assessment Methods for Nutrition and Physical Activity Research

AND

#### *Research Based Project Option A*

##### Trimester 3

- HSN753 Research Practice in Human Nutrition

Students would need to complete an additional 5 elective units to complete the 12 credit points for the H714 Master of Human Nutrition.

OR

#### *Research Based Project Option B*

##### Trimester 1

- HSN750 Nutrition Research Project Part A (2 credit points core unit)

##### Trimester 2

- HSN751 Nutrition Research Project Part B (2 credit points core unit)

Students would need to complete an additional 2 elective units to complete the 12 credit points for the H714 Master of Human Nutrition.

#### Elective units

##### Trimester 1

- HSN703 Diet and Disease
- HSN705 Public Health Nutrition
- HSN708 Nutrition Promotion
- HSN713 Food, Nutrition and Behaviour

##### Trimester 2

- HSN706 Food Policy and Public Health
- HSN709 Sports Nutrition
- HSN714 Systems Thinking in Public Health Nutrition
- HSN734 Obesity Prevention
- HSN741 Postgraduate Nutrition Practicum
- HSN746 Nutritional Issues from Early Childhood to Adolescence

### Trimester 3

- HSN738 International Nutrition
- HSN743 Nutrition for Healthy Ageing
- HSN760 International Perspectives in Food and Nutrition (next offered Trimester 3 2019)

Students intending to use H714 Master of Human Nutrition as a PhD entry pathway must complete these units:

- HSN715 Understanding Human Nutrition Research Studies
- HSN719 Assessment Methods for Nutrition and Physical Activity Research
- HSN750 Nutrition Research Project Part A
- HSN751 Nutrition Research Project Part B

### Work experience

Work Integrated Learning principles are embedded within all units. A Postgraduate Nutrition Practicum unit is also available for students to elect to undertake. Specifically designed Careers modules are available on the Course specific cloud Deakin site.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### Other learning experiences

A 1 credit point elective unit “International Perspectives in Nutrition” which features a 2 week study tour is available to all students every second year.

### Research and research-related study

Option A includes research specific units – 1cp research related study and 1cp independent research as well as 1cp in nutrition assessment unit.

Option B includes – 1cp research related study, 1cp nutrition assessment unit and 4cp independent research project.

# Master of Dietetics

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Dietetics
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	1.5 years full time. Units in this course are offered in semesters.
<i>CRICOS course code</i>	056059G
<i>Deakin course code</i>	H718
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

This three semester course builds on your undergraduate knowledge in physiology, biochemistry and nutrition and gets you professionally accredited in just 18 months.

Deakin was one of the first universities to offer a course in dietetics in Australia and has been proudly offering Dietitians Association of Australia accredited courses for over 40 years.

Deakin's program is one of the few dietetics Masters degrees in Australia of 18 months duration, allowing you to start your career sooner. As an Accredited Practising Dietitian, you will be eligible to work in all areas of dietetics, including clinical (hospital) dietetics, community nutrition, private practice, food industry, public health, sports nutrition, dietetic education and research, food service, public relations, marketing, communications, media, health promotion and policy development.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals, placements and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time. Teaching, placements and assessment tasks may take place outside of Deakin University teaching periods.

## Professional recognition

Deakin's Master of Dietetics has full accreditation from the Dietitians Association of Australia (DAA). Students graduating from accredited courses are eligible for full membership of the DAA and the Accredited Practising Dietitian (APD) program and to work in all areas of dietetics.

All dietetics education programs in Australia are required to undergo an accreditation review process by the Dietitians Association of Australia (DAA) every five years. Deakin has delivered a course in dietetics for the past 42 years, and has offered a fully accredited course since accreditation commenced. Our Master of Dietetics is currently undergoing a re-accreditation process, so we can continue offering our highly regarded course.

## Career opportunities

Dietetics is a career rich in opportunity. As an Accredited Practising Dietitian you will be eligible to work in all areas of dietetics, including: clinical (hospital) dietetics, community nutrition, private practice, food industry, public health, sports nutrition, dietetic education and research, food service, public relations, marketing, communications, media, health promotion and policy development.

## Participation requirements

The course involves compulsory placements of 10 weeks in a clinical setting, 7 weeks in a community setting and 4 weeks in a foodservice setting. These placements may require travel to rural areas.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Students are required to complete units in Trimester 3.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

## Pathways

This course can be a pathway to H541 Graduate Certificate of Health Research Practice.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Apply advanced knowledge of human nutrition and dietetics to support safe food practices and provide nutrition care for individuals, groups, and communities.
Communication	Develop high level communication skills for use with a range of audiences including colleagues, other health professionals and the community.
Digital literacy	Select and use a range of appropriate digital technologies to locate, assess and translate research findings and evaluate practice in human nutrition and dietetics.
Critical thinking	Apply critical thinking in the dietetic assessment and management of individuals, groups and communities.
Problem solving	Use an evidence-based framework to provide practical solutions to a range of changing and complex nutrition and dietetic issues.

Graduate learning outcomes	Course learning outcomes
Self-management	Employ reflective practice, to demonstrate expert judgement, responsibility and ethical practice in the field of nutrition and dietetics.
Teamwork	Establish and maintain collaborative relationships with a range of stakeholders to advance nutrition and dietetic sciences and improve client outcomes.
Global citizenship	Exercise professional and ethical dietetic practice for individuals, groups and communities from diverse social and cultural backgrounds and in different environments.

## Course rules

To complete the Master of Dietetics students must attain 12 credit points. All units are core (these are compulsory). Units may be worth 1 or 2 credit points – check each unit for its credit point value in the course structure below.

Failure of a compulsory practicum component in any unit of study will normally lead to exclusion. All expenses associated with practicum units, including any transportation or accommodation costs are the responsibility of the student.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

^ Indicates compulsory practicum core units required to complete in this course.

- HSN740 Dietetic Research Skills
- HSN744 Principles of Dietetics
- HSN754 Dietary Modification to Improve Health
- HSN742 Food Service Management ^
- HSN745 Community Nutrition ^
- HSN747 Clinical Dietetic Practice ^
- HSN758 Professional Practice for Dietetics

### Preclusions

Where a preclusion is granted, students must select another HSN7xx unit from the list below. For example if you were given a preclusion for HSN740 Dietetic Research Skills, it means that you are not required to enrol into HSN740, and instead you have to choose another HSN7xx unit from the following options:

#### Trimester 1

- HSN709 Sports Nutrition
- HSN713 Food, Nutrition and Behaviour

#### Trimester 2

- HSN706 Food Policy and Public Health
- HSN708 Nutrition Promotion
- HSN734 Obesity Prevention
- HSN746 Nutritional Issues from Early Childhood to Adolescence

#### Trimester 3

- HSN738 International Nutrition
- HSN743 Nutrition for Healthy Ageing

## Work experience

### Work Integrated Learning

Throughout the course you will have the opportunity to develop specialist skills related to the professional practice of nutrition and dietetics, and achieve competency in dietetic practice through extensive professional practice placements. Professional practice placements provide you with applied experience in clinical, community and food service settings to develop discipline specific knowledge.

You will also develop research, critical thinking and communication skills throughout the course. Please note, the course (and a career in dietetics) requires a high level of interpersonal communication skills. Students not possessing such skills may have difficulty in meeting professional course requirements and successfully completing their studies.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing placements.

### Third party arrangements

#### Agreement

4 Clinical Schools and ~30 placement sites. Placement sites vary each year and agreements or schedules to existing agreements are organised as required each year.

Cross Faculty placement sites are organised at the Faculty level and school specific agreements are signed by the Head of School.

#### Nature of third party arrangements

Clinical Schools provide teaching as well as supervision of students on placement. They are also involved as part of the assessment panel. Clinical partners and placement sites are involved in placement supervision of students.

#### Quality assurance arrangements

Describe arrangements to ensure quality and equivalence of student experience and learning for the same or similar courses delivered by Deakin.

Training for Clinical Educators is provided via an online module and as required face to face sessions as well as regular supervisor meetings. All qualifications of placement supervisors is monitored and audited. Compliance with Standards set by the Dietitians Association of Australia (DAA).

### Other learning experiences

Master of Dietetics students are required to undertake an elective placement experience in an area of Dietetics in which they are particularly interested and which may form part of their career focus.

Students also have the opportunity to take on voluntary learning experiences with partners such as the Geelong Football Club and the Deakin Melbourne Boomers Basketball Club, which are promoted through the course CloudDeakin site.

### Research and research-related study

The Master of Dietetics consists of 12 credit points. 1 credit point is specifically related to a research unit, which is offered in the first semester of the course. In later 2 credit point unit, students work on a group research project which includes data collection, and presentation and report writing. In a second 2 credit point unit, students complete an individual literature review.

# Master of Clinical Exercise Physiology

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Clinical Exercise Physiology
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	1.5 years full-time or part-time equivalent
<i>CRICOS course code</i>	072823J
<i>Deakin course code</i>	H743
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Study an exercise physiology course that's achieved outstanding levels of teaching excellence, clinical supervision, learning outcomes and employment in the sector.

Deakin's Master of Clinical Exercise Physiology is the first clinical exercise course in Victoria to get accredited by Exercise and Sports Science Australia (ESSA).

The course provides graduates with a simple pathway to accreditation as Accredited Exercise Physiologists (AEP) and access to Provider Numbers with Medicare Australia, WorkSafe Victoria, DVA, TAC, and other compensable funds and schemes.

The teaching team has expertise across all of the pathology areas needed for clinical exercise practice. The program covers all of the requirements for AEP accreditation and features the award-winning Clinical Exercise Learning Centre at Burwood (Melbourne), where you will develop your practice skills under close supervision and mentoring. You will then embark on a range of external clinical practicum experiences designed to optimise your exposure to a wide range of clientele, practitioners and institutions. Some of these placements lead directly to future employment.

You will develop knowledge and expertise to prevent and treat many chronic medical conditions, injuries and disabilities. You will also learn the effects of acute and chronic exercise on physiological and pathophysiological processes in individuals with injury and disease.

This course, along with our graduates, has received a number of ESSA awards, including runner-up exercise physiology practice of the year (2012), supervisor of the year (2014) and graduate of the year (2014).

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals, placements and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time. Teaching, placements and assessment tasks may take place outside of Deakin University teaching periods.

## Professional recognition

The Master of Clinical Exercise Physiology (H743) is the first AEP course in Victoria to be accredited by Exercise and Sports Science Australia (ESSA). Students are eligible to apply for accreditation as Accredited Exercise Physiologists (AEPs) upon completion of the course, and are then eligible for provider numbers with Medicare Australia, WorkSafe Victoria, DVA, TAC, and other compensable funds and schemes.

*Note: This course is currently accredited as at the date of publishing. The eligibility of students for membership of the accrediting body is subject to meeting the requirements of ESSA. Deakin University makes no representation that students will meet those requirements.*

## Career opportunities

Accredited Exercise Physiologists are the fastest growing allied health professionals in Australia. Since 2006 AEPs have been formally recognised by the Federal Department of Health and Ageing into allied health to deliver Medicare-compensable exercise services for those with chronic conditions or complex care needs. This has increased the career opportunities for those with an AEP recognised qualification.

More than 70% of graduates are employed within 6 months in AEP related employment in medical hospital/ clinic rehabilitation, occupational, community, or sports rehabilitation, private practice or in case management through compensable schemes such as Medicare, Worksafe, or the TAC.

## Participation requirements

The course involves compulsory clinical placements of 360 clinical hours across the course. These hours are completed in 3 blocks, one internal practicum experience and two external practicum experiences. These practicums may require travel to regional or rural areas.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Students are required to complete units in Trimester 3.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. Refer the relevant unit guide.

## Pathways

This course can be a pathway to H541 Graduate Certificate of Health Research Practice

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply knowledge of clinical exercise physiology to provide appropriate exercise prescription.
Communication	Communicate clinical exercise physiology theory and practice effectively to a range of audiences.
Digital literacy	Utilise various forms of information and apply them to authentic problems in clinical exercise physiology.
Critical thinking	Utilise research to inform appropriate clinical exercise physiology decision making.
Problem solving	Apply evidence based practice clinical exercise physiology solutions to chronic and complex clinical conditions.

Graduate learning outcomes	Course learning outcomes
Self-management	Reflect on practice and become an adaptable and responsible clinical exercise physiology practitioner.
Teamwork	Work effectively within clinical exercise physiology and interdisciplinary teams.
Global citizenship	Be professional and ethical in clinical exercise physiology practice.

## Course rules

To complete the Master of Clinical Exercise Physiology students must attain 12 credit points. All units are equal to 1 credit point completed over three trimesters (minimum 18 months) of full-time study and/or part-time equivalent undertaken in campus mode of study. All units are core units (these are compulsory). There are no elective units.

Students cannot complete the course in less than 18 months.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

Course structure applies to students commencing in 2016 onwards.

Teaching, placements and assessment tasks may take place outside of Deakin University teaching periods.

### Year 1

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSE703 Mental Health and Exercise Behaviour
- HSE705 Exercise Physiology for Cardiopulmonary Disease
- HSE707 Exercise Physiology for Musculoskeletal Injury and Disease
- HSE711 Pre Clinical Practice 1

#### Trimester 2

- HSE702 Exercise Physiology for Neurological and Neuromuscular Disease
- HSE704 Exercise Physiology for Metabolic Disease
- HSE712 Pre Clinical Practice 2
- HSE714 Clinical Practicum 1

#### Trimester 3

- HSE715 Clinical Practicum 2

### Year 2

#### Trimester 1

- HSE709 Exercise Physiology Across the Lifespan
- HSE717 Clinical Practicum 3
- HSE706 Research in Clinical Exercise Physiology

## Work experience

### Work-Integrated Learning

This course provides you with the required knowledge and necessary skills, developed through theoretical and pre-clinical units to enable you to take full advantage of the three clinical placements on offer. The clinical placement program consists of a fully integrated internal and external placement system. The internal placements occur in the award winning Deakin Clinical Exercise Learning Centre (CELC) and Baker IDI Clinical Exercise Service, with supervision provided by expert AEPs. The external placements are in a wide variety of settings aligned to the scope of practice for clinical exercise physiologists and sometimes lead directly to future employment. All placements are organised by MCEP staff who will provide you with professional industry links, reinforce your understanding of the role of an AEP and give you extensive opportunities to gain practical knowledge, skills and competencies that will enable you to practise confidently in this field.

Additional costs incurred for clinical placement may include:

- Police check, up to \$46, however a lesser rate is available when signed by the University Placement Officer
- Vaccinations: Students are expected to show evidence of vaccinations as per external placement requirements. Costs incurred will depend on the student's vaccination status.
- Current First Aid and CPR certificate
- Deakin Clinical Exercise Polo shirt, approximately \$25

In addition students may be required to complete a placement in a setting away from their current residence, i.e. a regional or rural placement. Any costs associated with this placement will be at the expense to the student. Further information for student financial support can be found at General Student Loans.

### Income support

Domestic students enrolled in this postgraduate coursework program may be eligible for student income support through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### Third party arrangements

30+ Clinical Partners, agreements signed by HOS for School contracts and Dean for Faculty wide agreements. Partners provide pivotal role in 360 clinical practicum hours required for accreditation of course and graduates. Clinical Supervisors offered Deakin sponsored clinical supervision training biannually and professional development annually, MCEP course accredited with Exercise and Sport Science Australia which includes audit of clinical practicum.

### Nature of third party arrangements

Clinical partners complement our internally supervised practicum placements where all supervisors are Accredited Exercise Physiologists or equivalent. Supervisors mentor and assess competency in MCEP students. Supervisors provided with supervisor manual containing all requirements and receive site visits from practicum coordinator and teleconference contact annually.

### Quality assurance arrangements

All MCEP students undertake one out of three practicum unit placements at Deakin and each practicum unit has assessment requirements independent of nature of external placement. External supervisor assesses competency but overall assessment provided via practicum unit chair. Assessment follows best practices guidelines with respect to learning design, marking rubric, 2nd assessors etc.

### Research and research-related study

1 credit point equivalent, HSE706 Research in Clinical Exercise Physiology

# Master of Professional Psychology

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Professional Psychology
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne), Waterfront (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or 2 years part-time
<i>Deakin course code</i>	H744
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

The Master of Professional Psychology will qualify graduates with an advanced body of knowledge in a range of contexts for the professional practice of psychology. It will specifically equip you with the core competencies required by the Psychology Board of Australia (PsyBA) to practice as a generalist psychologist. Graduates at this level will have specialised knowledge and skills for the professional practice of psychology.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include cloud-located classes, practicals, face-to-face intensives, placements and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

On successful completion of this course, graduates will have acquired the necessary skills to proceed to secure a final year of supervised practice in the field to enable them to gain generalist registration as a psychologist with the Psychology Board of Australia (under the '5+1 internship model' for registration). This course has been accredited by the Australian Psychology Accreditation Council (APAC) in accordance with the Accreditation Standards for Psychology Program. The eligibility of students for registration as a general psychologist by the Psychology Board of Australia is subject to meeting the requirements of the regulatory body (including the National Psychology Examination). Deakin University makes no representation that students will meet those requirements.

## Career opportunities

Graduates of the Master of Professional Psychology may find work in a wide variety of settings including the providers of specialist psychological services, Department of Health and Human Services, human resources, rehabilitation, disability services, schools and private practice.

## Participation requirements

All students, whether full time or part time, will be required to attend a number of compulsory workshops and weekend intensives throughout the course. In addition, students will be expected to attend at least 80% of blackboard collaborate sessions for their Units across the year. Students should expect to commit 10–12 hours of study per week per unit. Requirements for placements will vary depending upon where a student completes their practicum.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

Under the regulations of the Health Practitioner Regulation National Law Act 2009, Master of Psychology students are required to be provisionally registered from the commencement of enrolment and for the duration of enrolment in their degree. This is a mandatory requirement. Students should apply online for provisional registration with the Psychology Board of Australia as soon as they have been accepted into the degree. Alternatively, a paper form is available on the Board's website (see Application for provisional registration – APRO-76

## Pathways

H744 is a stand-alone, post graduate course that has no direct pathway to another Deakin course. Nearly 100% of graduates transition directly to full-time work. A small number of students with research aptitude and interest enrol in the PhD program.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Displays broad knowledge of common client presentations seen across the lifespan and understanding of the theoretical principles and research underlying psychological practice that prepares students to undertake the Psychology Board of Australia (PsyBA) internship program leading to full registration as a Psychologist.
Communication	Compose clearly written case reports; demonstrate effective verbal and interpersonal communication skills using appropriate language to communicate with specialists and non-specialists such as other health professionals, clients and carers within a range of professional settings.
Digital literacy	Use appropriate technologies to collect relevant discipline-specific information; assemble, evaluate, justify and integrate this information to formulate appropriate hypotheses, assessment and treatment approaches and disseminate this information to clients and health professionals.

Graduate learning outcomes	Course learning outcomes
Critical thinking	Critically evaluate and integrate scientific evidence and under supervision, transform this information into case formulations, assessment, interventions and policy that demonstrate evidence-based practice in the field of psychology.
Problem solving	Under the guidance of a supervisor, analyse theoretical frameworks and adapt foundation knowledge and skills to design evidence-based intervention and management approaches tailored to meet the needs of diverse client presentations.
Self-management	Demonstrates ethical and professional practice, showing an appreciation of the need for continued supervision, accountability, good judgment and reflective practice in all areas of psychological and professional work and complies with the National Law requirements for conduct, health and performance.
Teamwork	Develop, maintain and manage professional, ethical and collaborative relationships with multidisciplinary team members and stakeholders to work effectively together in the best interest of the client and the profession.
Global citizenship	Demonstrate, report and apply ethical, legal and professional principles to work productively as a provisional psychologist within diverse social cultural and environmental contexts by collaborating and communicating in a self-reflective and culturally sensitive manner.

## Course rules

To complete the Master of Professional Psychology students must attain 8 credit points. All 8 units are core. The course has a strong emphasis on the development of skills and evidence-based practice. Students will complete a minimum of 4 credit points each trimester over one year for full time study or part time equivalent.

Students are required to complete and pass both Practicum units. Failure of placement is grounds for exclusion.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

## Course structure

### Core units

#### Level 1

##### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HPY722 Practice and Ethics in Professional Psychology
- HPY723 Psychological Assessment in Practice
- HPY724 Psychological Interview and Intervention Strategies
- HPY725 Professional Practicum A

##### Trimester 2

- HPY726 Psychological Practice Across the Lifespan
- HPY727 Working with Diverse Populations
- HPY728 Applied Methods for Professional Practice
- HPY729 Professional Practicum B

## Work experience

### Placement program

Placements are designed to equip students with a range of professional skills and an awareness of professional issues in psychological practice. You will have placements in at least two different settings. Your placement program will be determined jointly by you, the placement coordinators, and the practitioners supervising the placements. Contracts will be drawn up which will clearly specify the skills to be taught and the responsibilities of the student and placement supervisor. Placement supervisors are registered psychologists, eligible for membership of the Australian Psychological Society. Each placement requires the full complement of days to be completed. Failure of any one placement may result in exclusion from the course.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Health and Human Services Management

<i>Award granted</i>	Master of Health and Human Services Management
<i>Duration</i>	1.5 years full-time or part-time equivalent
<i>CRICOS course code</i>	056060C
<i>Deakin course code</i>	H746

*Offered to continuing students only. Students commencing in 2015 onwards should refer to the H756 Master of Health and Human Services Management course entry.*

## Course overview

The Master of Health and Human Services Management will prepare you to be an effective manager and leader and is particularly well suited to those interested in working in the health and human services sector as well as those who currently hold senior positions in this industry.

The course will provide students with opportunities to develop core competencies required for leadership and strategic planning, evidence-based decision making, health needs assessment and evaluation, program planning and monitoring, resource and project management, communication and negotiation.

The course focuses on evidence based decision making and health service delivery outcomes and allows you to choose elective study options that align with your career aspirations and interest areas. Elective units can be chosen from specialty areas such as health economics, public health research, health promotion, and business administration. There is also flexibility of choice between research and coursework – enabling you to construct a study program that best meets your interests and career aspirations.

## Pathways

The Master of Health and Human Services Management is constructed to provide you with the opportunity to gain a second masters degree with only one additional trimester of full-time study. You may choose to combine the Master of Health and Human Services Management with the Master of Health Promotion or Master of Public Health. Enrolment in a second masters degree is subject to application and selection. To take advantage of this opportunity, eligible students are advised to speak to the course director regarding how to structure their course to ensure the appropriate subjects are chosen early and allow this option to develop.

Career opportunities for graduates of the Master of Health and Human Services Management exist in hospitals and health services, welfare organisations, government departments and agencies and non-government organisations. Employment opportunities exist locally and overseas.

The course is designed within an international context.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises of 12 credit points including eight core units (8 credit points) and four elective units (4 credit points).

## Course structure

### Core units

HSH701	Principles and Practice of Public Health
HSH702	Contemporary Health Issues and Policies
HSH717	Health Economics 1
HSH719	Economic Evaluation 1
MPA702	Financial Interpretation
MPK732	Marketing Management
MPM701	Business Process Management
MPM722	Human Resource Management

### Elective units

You may choose to complete the 4 credit points of elective units according to one of the three options outlined below. To add flexibility and diversity to your studies, you may choose to undertake your elective units in management and public health, or select elective units of study from approved postgraduate units offered by any faculty of the University (subject to availability and approval from the course coordinator).

#### *Option A – Minor research project*

This option requires the completion of a minor research project and two elective units which you may choose from the Master of Public Health or the Master of Business Administration (see Option C below). If you undertake your two elective units from the Master of Public Health, this option will provide you with the opportunity to obtain a Master of Public Health in addition to a Master of Health and Human Services Management, by undertaking an additional 4 credit points of study to cover the remaining core and appropriate selective/elective units from the Master of Public Health.

HSH731	Minor Project A
HSH732	Minor Project B

plus two electives from the MPH or MBA elective streams

#### *Option B – Major research project*

This option requires the completion of a major research project. If you undertake your research project in a topic area relevant to public health, this option will provide you with the opportunity to obtain a Master of Public Health in addition to a Master of Health and Human Services Management, by undertaking an additional 4 credit points of study to cover the remaining core and appropriate selective/elective units from the Master of Public Health.

HSH733	Major Project A
HSH734	Major Project B

#### *Option C – Elective units from the elective unit listed*

Students who wish to undertake the second Master option, please note that:

- For the Master of Business Administration as a second Master, choose four units from the MBA elective list and also ensure that core unit requirements are met.
- For the Master of Public Health as a second Master, choose four units from the Health elective list and also ensure that core unit requirements are met.
- For the Master of Health Promotion as a second Master, choose four units from the Health elective list and also ensure that core unit requirements are met as far as possible.

## Health elective list

HMF701	Agricultural Health and Medicine *
HSH703	Health Promotion
HSH704	Health Communication
HSH705	Needs Assessment and Health Program Planning
HSH706	Social Epidemiology (No longer available for enrolment)
HSH707	Health Promotion in a Global Context (No longer available for enrolment)
HSH709	Health and Social Impact Assessment
HSH715	Qualitative Health Research
HSH724	Healthy Cities and Urban Communities
HSH725	Research Literacy for Health Practice
HSH728	Health Equity and Human Rights
HSH736	Community Consultation and Participation
HSH739	Global Health Policy and Planning
HSH740	Unit description is currently unavailable
HSH744	Epidemiology 1
HSH745	Health Program Evaluation
HSH746	Biostatistics 1
HSH760	International Perspectives in Health and Social Development
HSN701	Principles of Nutrition
HSN702	Lifespan Nutrition
HSN705	Public Health Nutrition
HSN706	Food Policy and Public Health
HSN713	Food, Nutrition and Behaviour
HSN734	Obesity Prevention

## Master of Business Administration (MBA) elective list

MPA751	Unit description is currently unavailable
MPE781	Economics for Managers
MPF753	Finance
MPM703	Business Strategy and Analysis ^
MPM706	Unit description is currently unavailable
MPM721	Unit description is currently unavailable
MPM735	International Business Management

\* HMF701 includes a 5 day intensive seminar held in February

^ This unit should be completed by those interested in the Master of Business Administration (International)

# Master of Public Health

<i>Award granted</i>	Master of Public Health
<i>Duration</i>	1.5 years full-time or part-time equivalent
<i>CRICOS course code</i>	020018B
<i>Deakin course code</i>	H747

*Offered to continuing students only. Students commencing in 2015 onwards should refer to the H757 Master of Public Health course entry.*

## Course overview

The Master of Public Health focuses on improving existing health-promoting environments, identifying public health priorities, generating initiatives for policy and action, and developing strategies and interventions to ensure equity in the health system. It aims to:

- assist students to appreciate the historical foundations of public health and lessons learned from history;
- develop a broad-based understanding of the determinants of health in populations;
- develop knowledge, skills and understanding of the broad public health endeavours
- develop the knowledge and skills necessary to maintain and improve upon existing health-promoting environments
- develop critical thinking about efforts to promote health and prevent disease
- carry out research to identify public health priorities and generate initiatives for policy and action, public health program planning and evaluation
- develop strategies to ensure equity in the health system and interventions to promote the health of disadvantaged groups.
- possess an appreciation of the complex challenges in public health and the need for multidimensional solutions;
- develop the skills necessary to generate and use research data related to public health issues, endeavours and interventions.

## Pathways

The Master of Public Health is constructed to provide you with the opportunity to gain a second masters degree with only one additional trimester of full-time study. You may choose to combine the Master of Public Health with the Master of Health and Human Services Management or the Master of Health Promotion. Enrolment in a second masters degree is subject to application and selection. To take advantage of this opportunity, eligible students are advised to speak to the course director regarding how to structure their course to ensure the appropriate subjects are chosen early and allow this option to develop.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

This course consists of 12 credit points of study, comprising a combination of core units (4 credit points), selective units (at least 2 credit points) and elective units that can be chosen according to the desired career pathway.

The majority of core, selective and elective units will be offered in Cloud (online) and campus mode. Some units may also be offered in block mode.

## Course structure

### Core units

All students must complete the following core units:

HSH701	Principles and Practice of Public Health
HSH702	Contemporary Health Issues and Policies
HSH744	Epidemiology 1
HSH746	Biostatistics 1

### Selective units

All students must complete a minimum of two selective units from the five options listed below:

HSH703	Health Promotion
HSH717	Health Economics 1
HSH725	Research Literacy for Health Practice
HSH728	Health Equity and Human Rights
HSN705	Public Health Nutrition

### Elective units

Students must choose up to six additional credit points of elective study completed as either Option A or Option B. Elective credit points may be chosen from within or across the 'career pathways' listed. It is also possible to undertake elective units from any other faculty subject approval of the course coordinator. Students interested in pursuing this option should seek the advice of the course coordinator before proceeding.

#### Option A

HSH731	Minor Project A (1 credit point)
HSH732	Minor Project B (1 credit point)

Plus four elective units from the career pathways listed.

#### Option B

HSH733	Major Project A (2 credit points)
HSH734	Major Project B (2 credit points)

Plus two elective units from the career pathways listed.

## Career pathways

### **Health Promotion and Community Development**

HSH702	Contemporary Health Issues and Policies
HSH703	Health Promotion
HSH704	Health Communication
HSH705	Needs Assessment and Health Program Planning
HSH707	Unit description is currently unavailable *
HSH709	Health and Social Impact Assessment ~
HSH715	Qualitative Health Research *
HSH724	Healthy Cities and Urban Communities *
HSH725	Research Literacy for Health Practice
HSH728	Health Equity and Human Rights
HSH736	Community Consultation and Participation *
HSH739	Global Health Policy and Planning *
HSH740	Unit description is currently unavailable *
HSH745	Health Program Evaluation

*Note: Students undertaking this career pathway should take the HSH703 Health Promotion selective unit.*

### **Environments for Health**

HSH702	Contemporary Health Issues and Policies
HSH707	Unit description is currently unavailable *
HSH709	Health and Social Impact Assessment ~
HSH724	Healthy Cities and Urban Communities *
HSH728	Health Equity and Human Rights
HSH736	Community Consultation and Participation *
HSH739	Global Health Policy and Planning *
HSH740	Unit description is currently unavailable *
HMF701	Agricultural Health and Medicine +

*Note: Students undertaking his career pathway should take the HSH728 Health Equity and Human Rights selective unit.*

### **Public Health Practice**

HSH701	Principles and Practice of Public Health
HSH702	Contemporary Health Issues and Policies
HSH709	Health and Social Impact Assessment ~
HSH717	Health Economics 1
HSH719	Economic Evaluation 1

HSH725	Research Literacy for Health Practice
HSH728	Health Equity and Human Rights
HSH739	Global Health Policy and Planning *
HSH744	Epidemiology 1
HSH745	Health Program Evaluation
HSH746	Biostatistics 1
HMF701	Agricultural Health and Medicine +

*Note: Students undertaking his career pathway should take the HSH728 Health Equity and Human Rights selective unit.*

### **Health Economics and Management**

HSH702	Contemporary Health Issues and Policies
HSH709	Health and Social Impact Assessment ~
HSH717	Health Economics 1
HSH719	Economic Evaluation 1
HSH739	Global Health Policy and Planning *
HSH744	Epidemiology 1
HSH745	Health Program Evaluation
HSH746	Biostatistics 1
MPM722	Human Resource Management

*Note 1: Students undertaking this career pathway should take the HSH717 Health Economics 1 selective unit.*

*Note 2: Students may also select a unit from the Master of Business Administration offered at Deakin University subject to approval from the course leader.*

### **Public Health Nutrition**

HSN701	Principles of Nutrition
HSN702	Lifespan Nutrition
HSN705	Public Health Nutrition
HSN706	Food Policy and Public Health
HSN713	Food, Nutrition and Behaviour
HSN734	Obesity Prevention
HSN738	International Nutrition

*Note: Students undertaking this career pathway should take the HSN705 Population Health and Food Issues selective unit.*

## **Applied Research**

HSH715	Qualitative Health Research *
HSH719	Economic Evaluation 1
HSH725	Research Literacy for Health Practice
HSH744	Epidemiology 1
HSH745	Health Program Evaluation
HSH746	Biostatistics 1

*Note: Students undertaking this career pathway should take the HSH725 Research for Health Practice selective unit.*

- \* Unit offered in alternate years
- ~ HSH709 includes a 4 day intensive program held in June
- + HMF701 includes a 5 day intensive seminar held in February

## **Income support**

Domestic students enrolled in this postgraduate coursework program may be eligible for student income support through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

## **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Nutrition and Population Health

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Nutrition and Population Health
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	1–2 years full-time or part-time equivalent, depending on your entry point
<i>CRICOS course code</i>	092729G
<i>Deakin course code</i>	H748
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

This is an advanced course in human nutrition which draws content from related disciplines such as public health, food science, biochemistry, physiology, epidemiology, psychology, sociology and politics and policy.

Throughout the course you will develop advanced knowledge of human nutrition, an understanding of the biological, social and policy related aspects of human nutrition, and skills that will enable you to practise effectively as a nutritionist in a range of employment settings.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals, placements and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time. Teaching, placements and assessment tasks may take place outside of Deakin University teaching periods.

Each unit will require 11–13 study hours per week that may include some or all of the following: guided learning with online learning resources, participation in Blackboard Collaborate (online seminars), individual study, research of the nutrition literature, learning activities in the workplace, assessment activities and participation in CloudDeakin discussions. Each unit will be further supported by face to face learning activities on campus with academic staff.

## Professional recognition

Growing public interest in the relationship between diet and health is evident and, as a result, there are increasing demands from the public for reliable and trustworthy information. In response, the Nutrition Society of Australia (NSA) has developed a 'Register of Nutritionists' to establish a list of appropriately qualified nutrition professionals.

As a graduate of this course, you may be eligible for registration as an 'Associate Nutritionist'. Following three years of relevant work experience, Associate Nutritionists are able to apply for 'Registered Nutritionist' status. Registration with NSA does not authorise registrants to obtain provider numbers with Medicare or Private Health Insurers. Please refer to the Nutrition Society of Australia website for further information or queries about registration.

## Career opportunities

As a graduate of this course, you will find opportunities in a wide range of nutrition positions in government departments, non-government organisations, community sector agencies, food industry and consulting.

## Participation requirements

International students must attend the onsite seminars to fulfil their visa requirements

Students are required to complete units in Trimester 3.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Applicable only to students undertaking practicum units, who will therefore require a Working With Children Check. Not mandatory for all students.

## Pathways

This course does not provide a pathway to higher degree by research.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply food and nutrition and health knowledge from a range of perspectives.
Communication	Select and use a variety of engaging communication modes to disseminate knowledge to individuals, groups, government and non-government organisations and health professionals.
Digital literacy	Select and use appropriate technologies to source, understand, evaluate, and communicate information to professional networks and communities.
Critical thinking	Source and critically analyse the food and nutrition literature to apply an evidence-based approach to the field.
Problem solving	Identify and apply practical solutions to a range of changing and complex food and nutrition and health issues.
Self-management	Employ self-directed, reflective work and learning practices in a responsible manner to professionally contribute to food and nutrition sciences.
Teamwork	Work collaboratively as part of interdisciplinary teams with a range of stakeholders to advance the field of food and nutrition sciences.
Global citizenship	Engage in professional and ethical practice that demonstrates awareness of, and adaptability to, diverse social, cultural and environmental contexts in food and nutrition sciences.

## Course rules

To complete the Master of Nutrition and Population Health students must attain 16 credit points. All units are equal to 1 credit point completed over five trimesters of full-time study and/or part-time equivalent undertaken in campus mode of study. All units are core units (these are compulsory). There are no elective units.

Trimester 3 is a compulsory study period for all H748 international students in order to enable students to complete units in the required sequence and complete the course within the specified course duration of their Confirmation of Enrolment.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

Students must enrol in the Burwood (Melbourne) offerings of all units

### Year 1

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HSN701 Principles of Nutrition
- HSN705 Public Health Nutrition
- HSN749 Biochemistry and Physiology for Human Nutrition

#### Trimester 2

- HSN702 Lifespan Nutrition
- HSN715 Understanding Human Nutrition Research Studies
- HSN735 Essentials of Food Science

#### Trimester 3

- HSN719 Assessment Methods for Nutrition and Physical Activity Research
- HSN743 Nutrition for Healthy Ageing
- HSN753 Research Practice in Human Nutrition

### Year 2

#### Trimester 1

- HSN703 Diet and Disease
- HSN708 Nutrition Promotion
- HSN713 Food, Nutrition and Behaviour

#### Trimester 2

- HSN706 Food Policy and Public Health
- HSN714 Systems Thinking in Public Health Nutrition
- HSN734 Obesity Prevention
- HSN746 Nutritional Issues from Early Childhood to Adolescence

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

The prescribed course structure includes research specific units – 1 credit point research related study and 1 credit point independent research as well as 1 credit point in nutrition assessment unit.

An additional 4 credit point research project (2 x 2 credit points) is available where students can select electives.

# Master of Health Promotion

<i>Award granted</i>	Master of Health Promotion
<i>Duration</i>	1.5 years full-time or part-time equivalent
<i>CRICOS course code</i>	069327G
<i>Deakin course code</i>	H749

*Offered to continuing students only. Students commencing in 2015 onwards should refer to the H759 Master of Health Promotion course entry.*

## Course overview

Preventing illness and promoting health are major aspects of the work of health agencies in all developed and developing countries. Deakin's Master of Health Promotion is designed to enable students from varying backgrounds to acquire the knowledge and skills necessary to develop appropriate and evidence-based health promotion programs. You will obtain a broad-based understanding of the determinants of health in populations and of the range of strategies that practitioners and organisations can implement to make a difference in creating healthier communities. The course addresses strategies that seek to help people take action about their own health, to strengthen community action and to create environments that are more supportive of health – policy environments, physical environments, social environments and economic environments.

The Master of Health Promotion provides you with the opportunity to extend your study of health promotion to undertake a major or minor project. These projects allow you to apply the knowledge and skills developed in the coursework component of the degree to a significant health issue by undertaking a comprehensive literature review, industry-linked project or a research project.

## Professional recognition

Graduates may be eligible to apply for membership of the Australian Health Promotion Association (AHPA) and the International Union of Health Promotion and Education.

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the relevant professional body retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Pathways

The Master of Health Promotion is constructed to provide you with the opportunity to gain a second masters degree with only one additional trimester of full-time study. You may choose to combine the Master of Health Promotion with the Master of Health and Human Services Management or the Master of Public Health. Enrolment in a second masters degree is subject to application and selection. To take advantage of this opportunity, eligible students are advised to speak to the course director regarding how to structure their course to ensure the appropriate subjects are chosen early and allow this option to develop.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

This course comprises 12 credit points. All students must complete the seven core units.

The additional five credit points are made up as follows:

A minor project – HSH731/732 Minor Project (2 credit points) – PLUS three units (3 credit points) that complement health promotion practice.

OR

A major project – HSH733/734 Major Project (4 credit points) – PLUS one unit (1 credit point) from the list of electives linked below.

*Note: To undertake a major project, students are required to have a WAM of 70 or above and subject to Course Leader's approval.*

## Course structure

### Core units

#### Trimester 1

HSH702 Contemporary Health Issues and Policies  
HSH703 Health Promotion  
HSH704 Health Communication

Plus one elective credit point

#### Trimester 2

HSH705 Needs Assessment and Health Program Planning  
HSH725 Research Literacy for Health Practice  
HSH728 Health Equity and Human Rights  
HSH745 Health Program Evaluation

#### Trimester 3

##### *Option A*

HSH731 Minor Project A  
HSH732 Minor Project B

Units may be taken concurrently (full time study) or sequentially (part time study)

Plus two elective credit points

OR

##### *Option B*

HSH733 Major Project A  
HSH734 Major Project B

*(Note: To undertake a major project, students are required to have a WAM of 70 or above and subject to Course Leader's approval.)*

## Elective unit options

HSH701	Principles and Practice of Public Health
HSH707	Unit description is currently unavailable
HSH709	Health and Social Impact Assessment
HSH712	Alcohol, Tobacco, and other Drugs
HSH715	Qualitative Health Research
HSH717	Health Economics 1
HSH719	Economic Evaluation 1
HSH724	Healthy Cities and Urban Communities
HSH736	Community Consultation and Participation
HSH740	Unit description is currently unavailable
HSH744	Epidemiology 1
HSH746	Biostatistics 1
HSH747	Biostatistics 2
HSH760	International Perspectives in Health and Social Development (requires application and interview)
HSH769	Comparative Health Systems
HMF701	Agricultural Health and Medicine
HSN701	Principles of Nutrition
HSN702	Lifespan Nutrition
HSN706	Food Policy and Public Health
HSN724	Food Science B (No longer available for enrolment)
MPK704	Sustainable Environmental Marketing

# Master of Psychology (Clinical)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Psychology (Clinical)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne), Waterfront (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	The Master of Psychology (Clinical) is a two year degree that is designed to enable completion of coursework, practical placement units and the research thesis within these two years. However, in some instances, students may require slightly longer to complete their placement or research thesis.
<i>CRICOS course code</i>	060023G
<i>Deakin course code</i>	H750
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Become a specialist in the diagnosis and treatment of psychological and mental health conditions.

Based on an integrative approach to clinical psychology that emphasises evidence-based practice, this course has been designed in consultation with industry partners. Interrelated streams of theory, research and practice provide the skills needed to become a registered psychologist.

Our award winning teaching strategies and learning resources, include simulation and competency-based assessment approaches.

The course is based on the scientist/practitioner model that rests firmly on a foundation of established knowledge and current evidence-based research.

As a student in our clinical training programs, you will have opportunities to develop clinical skills in our unique clinics embedded in our public mental health partners, Eastern Health and Barwon Health and through placements in an array of community agencies. This lets you put your academic knowledge into real-life application, as well as develops your professional identity and practice through early adoption of supervision and professional learning plans.

Most clinical psychologists develop expertise in specific areas or practise in sub-specialisations of clinical psychology. In addition to professional practice, clinical psychologists may be involved in research, teaching and supervision, program development and evaluation, public policy and other activities that promote psychological health in individuals, families and groups.

Deakin's psychology courses are well regarded in the workplace, as are our graduates, with Deakin psychology students highly successful in gaining employment after graduation, and a significant number employed prior to the completion of their studies.

## Indicative student workload

The Master of Psychology (Clinical) is a full-time course and as such, it requires a full-time commitment from students. Nevertheless, it is recognised that many students will need to work to support themselves for the duration of their study. Students are advised that working over and above 8 hours per week is likely to impact their progress through the course.

The Master of Psychology (Clinical) program is a multi-campus program across Deakin Burwood (Melbourne) and Deakin Waterfront (Geelong). The face-to-face coursework component is predominantly held at the Burwood Campus in a purpose built clinical teaching facility. Some teaching will be held in Geelong including some full-day clinical teaching workshops while other aspects of the teaching and learning occurs in the online CloudDeakin environment. With few exceptions, students will attend both the Barwon Health Deakin Psychology Clinic and the Eastern Health Psychology Clinics as part of their Placement programs.

## Professional recognition

This course has been accredited by the Australian Psychology Accreditation Council (APAC) in accordance with the Accreditation Standards for Psychology Program (APAC, 2010). These standards are designed for accreditation of programs such as this for pathway to practice as a registered psychologist. As such, this course is approved by the Psychology Board of Australia (PsyBA) for the purposes of approving it under the National Law.

On completion of this course graduates may apply to the PsyBA for registration as a psychologist. To obtain endorsement in the Clinical area of specialisation graduates are required to complete two years of approved supervised practice and fulfil professional development requirements.

*Note: This course is accredited at the date of publishing. The eligibility of students for registration by the Psychology Board of Australia, and for membership of professional bodies such as the Australian Psychological Society (APS) and its Clinical College is subject to meeting the requirements of the regulatory body and the professional association. Deakin University makes no representation that students will meet those requirements.*

*Students should note that the Accreditation Standards for Psychology Programs have been reviewed and updated (Accreditation Standards for Psychology Programs (2017)) and these new standards will apply to incoming students from 1 January 2019.*

## Career opportunities

Clinical psychologists are specialists in the assessment, diagnosis and treatment of psychological and mental health conditions that range from mild to severe and complex. They are often involved in designing and implementing a diverse range of prevention and mental health promotion programs, and may work with infants, children, adolescents, adults and older adults.

Most clinical psychologists develop expertise in specific areas, or practice in sub-specialisations of clinical psychology. In addition to professional practice, clinical psychologists may be involved in research, teaching and supervision, program development and evaluation, public policy and other activities that promote psychological health in individuals, families and groups.

## Participation requirements

Students are required to complete 3 compulsory clinical placements of 2–3 days per week for approximately 20 weeks. These placements include at least one placement in the Barwon region at our joint Clinical Training Clinic with Barwon Health.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student’s immunisation status is not satisfactory to the health organisation.

Under the regulations of the Health Practitioner Regulation National Law Act 2009, Master of Psychology students are required to be provisionally registered from the commencement of enrolment and for the duration of enrolment in their degree. This is a mandatory requirement. Students should apply online for provisional registration with the Psychology Board of Australia as soon as they have been accepted into the degree. Alternatively, a paper form is available on the Board’s website (see Application for provisional registration – APRO-76).

## Pathways

Master of Psychology (Clinical) students who wish to enrol in the Doctor of Psychology (Clinical) program can apply in the usual manner for entry into the D Psych (Clinical) course at the end of the first year of the M Psych (Clinical), competing with newly applying D Psych (Clinical) students. They must also successfully undertake a Doctoral level thesis confirmation. Successful students will receive Recognition of Prior Learning for all comparable units completed thus far allowing direct entry into the second year of the Doctor of Psychology (Clinical).

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Display an advanced and integrated knowledge of psychopathology and the theoretical principles underlying the practice of clinical psychology, with respect to evidence-based practice of assessment, diagnosis, treatment and prevention across the lifespan.
Communication	Compose clearly written case reports; demonstrate effective verbal and interpersonal communication skills using appropriate language to communicate with specialists and non-specialists such as other health professionals, clients and carers within a range of professional settings.
Digital literacy	Expert use of appropriate technologies to collect relevant discipline-specific information; assemble, evaluate, justify and integrate this information to formulate appropriate hypotheses, assessment and treatment approaches and disseminate this information to clients and health professionals.

Graduate learning outcomes	Course learning outcomes
Critical thinking	Skills in the design and conduct of research; and critically evaluate, synthesise and integrate complex scientific evidence, transform this information into case formulations, assessment, interventions and policy that demonstrate evidence-based professional practice in the field of clinical psychology.
Problem solving	Skills to analyse theoretical frameworks and adapt knowledge and skills from psychological, biological and medical fields to design multiple, creative assessment and treatment approaches tailored to meet the needs of diverse client presentations.
Self-management	Demonstrate ethical and professional practice, showing personal autonomy, accountability, good judgment and reflective practice in all areas of psychological and professional work and scholarship.
Teamwork	Develop, maintain and manage professional, ethical and collaborative relationships with multidisciplinary team members and stakeholders to work effectively together in the best interest of the client and the profession.
Global citizenship	Demonstrate, report and apply ethical, legal and professional principles to work productively as a clinical psychologist within diverse social, cultural and environmental contexts by collaborating and communicating in a self-reflective and culturally sensitive manner.

## Course rules

To complete the Master of Psychology (Clinical) students must attain 16 credit points covering three strands: theory, research and practice. Students will complete a minimum of 4 credit points each trimester over two years. All units are core (these are compulsory).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

#### Level 1

##### Trimester 1

HAI010 Academic Integrity (0 credit points)

HPS714 Studies in Psychopathology

HPS776 Issues in Professional Psychology

HPS777 Psychological Intervention 1

HPS779 Psychological Assessment

##### Trimester 2

HPS706 Clinical Placement and Case Analysis 1

HPS707 Advanced and Applied Research Methods

HPS708 Psychological Intervention 2

HPS766 Research Thesis A

## Level 2

### Trimester 1

HPS705	Advanced Clinical Assessment
HPS709	Clinical Placement and Case Analysis 2
HPS767	Research Thesis B
HPS778	Biological and Neuropsychological Perspectives on Disorder

### Trimester 2

HPS711	Psychological Intervention 3
HPS712	Clinical Placement and Case Analysis 3
HPS787	Research Thesis C

*Note: Consistent with a developmental approach, there is a prescribed sequence for coursework and placement units such that successful completion of earlier units is required to enrol in later units. Specific information regarding pre-requisites are described in the individual Unit Guides.*

## Work experience

### Placement program

The clinical placements are designed to equip students with a range of professional skills and an awareness of professional issues. Students will benefit from Deakin's placement partnerships with Barwon Health and Eastern Health with these placements enabling them to gain experience of adult, adolescent and child problems. Overall the placements provide students with diverse experience across community and institutional care; and medical and non-medical agencies. The placement program will be determined jointly by the student, the placement coordinators, and the course leadership team. Contracts will be drawn up which will clearly specify the skills to be taught and the responsibilities of the student and placement supervisor. With few exceptions, placement supervisors are registered psychologists with a clinical endorsement as a specialised area of practice, as well as being Registered supervisors. Each placement requires the full complement of days to be completed. Failure of any one placement may result in exclusion from the course.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Third party arrangements

### Barwon Health

- Nursing and Midwifery and Allied Health Student Placement Agreement between the Faculty of Health, Deakin University and Barwon Health.
- Valid for 1 January 2015 to 31 December 2019
- Schedule include Psychology students
- Agreement signed by Executive Dean, Prof. Brendan Crotty

### Eastern Health

- Partnership Agreement – Faculty of Health, Deakin University and Eastern Health.
- Valid from 1 January 2017 to 31 December 2017
- Agreement signed by Head of School and Chief Executive Eastern Health.

## Nature of third party arrangements

### Barwon Health

The agreement provides for a 50% contribution to two full time joint appointments (one of which fulfils the role of Clinic Director) as well as administration support to the Barwon Health Deakin Psychology Clinic. At the time of the completion of this documentation, the purpose built clinical and clinical training facility was located at 121 Myers Street, Geelong. Joint appointees employed under this agreement provide oversight of the clinical training facility, as well as clinical supervision of student placements within the Clinic. In addition, the incumbents teach into the program and contribute to other academic work as agreed.

### Eastern Health

The agreement provides for a 50% contribution to two full time joint appointments (one of which fulfils the role of Clinic Director) as well as administration support. At the time of completion of this documentation, the Eastern Health Psychology Clinic is co-located with the Child and Youth Mental Health Service (CYMHS) in Station Street, Box Hill. Joint appointees employed under this agreement provide oversight of the clinical training facility, as well as clinical supervision of student placements within the Clinic. In addition, the incumbents teach into the program and contribute to other academic work as agreed.

## Quality assurance arrangements

Course design, revision and quality improvement is focussed on design principals provided for in the draft Design Principles for Units and Courses (Deakin). In addition, quality assurance is supported by external accreditation by the APAC which occurs on a 5 year cycle. External Industry feedback is provided for by the contribution of a well-engaged Advisory Board and is incorporated to annual and major course review processes. This is supplemented by robust student feedback with the nomination of Student Representation at each Course level who feed into mid and post Semester Clinical Team meetings and annual Course reviews.

## Research and research-related study

As per APAC, It is a requirement that accredited Masters Level Programs ensure that graduates have investigated a substantive individual research question relevant to the discipline of psychology. This is equivalent to a Bachelor Honours Degree or Graduate Diploma Research project specifically developed over 3 (4 Credit Points) Units (Research Thesis A, B, and C) and supported by the completion of Advanced and Applied Research methods (1CP).

Furthermore, APAC accreditation assumes ongoing compliance with the HESF for the accreditation and delivery of programs of study, including meeting the requirements of the AQF Higher education programs at all levels of the AQF accredited by APAC. The M Psych (Clinical) is a Level 9 with graduates demonstrating application of knowledge and skills via the planning and executing of a substantial research-based project, capstone experience and/or piece of scholarship.

# Master of Psychology (Organisational)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Psychology (Organisational)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent.  The Masters course is two years of full time study or its equivalent. However, students should note that delays in either completion of the research thesis or delays in accessing or completing placements may mean that the duration of the course may be extended.
<i>CRICOS course code</i>	088717B
<i>Deakin course code</i>	H752
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Work with organisations, teams and individual employees to improve their performance and increase effectiveness and productivity in the workplace.

Organisational psychology is a rapidly growing area of psychology in Australia and around the world. You will be sought-after for your ability to analyse organisations and their people, and devise selection, motivational, developmental, wellbeing and change strategies for organisational, team and individual performance and wellbeing.

The Master of Organisational program at Deakin has very strong research, placement and consulting connections with a large number of external organisations. Deakin regularly welcomes international and local guest lecturers and speakers throughout the year.

Deakin's psychology courses are well regarded in the workplace, and our graduates are highly successful in gaining employment shortly after graduation. A significant number become employed prior to the completion of their studies.

The Master of Psychology (Organisational) will equip you with the academic, practical and research skills required for accreditation and registration, and for employment in of one of the many organisations employing psychologists with these kinds of skills and experience. Upon completion, the degree qualifies you to register as a generalist psychologist with the Psychology Board of Australia and also allows you to apply for entry to their approved registrar program to gain endorsement as an organisational psychologist.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals, placements and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Psychology (Organisational) meets the requirements for graduates to register as generalist psychologists with the Psychology Board of Australia, and for membership of the Australian Psychological Society (APS). Graduates will be eligible to apply for membership of the College of Organisational Psychologists and endorsement as an Organisational Psychologist following two years of work experience supervised by an organisational psychologist, together with completion of stipulated professional development requirements.

## Career opportunities

Organisational psychology is a growth area in psychology. Organisations have come to appreciate the contribution that organisational psychologists can make in areas such as personnel selection, employee motivation, teamwork, employee engagement, communication skills, stress management, employee evaluation, job satisfaction, efficiency and productivity. As a registered and accredited organisational psychologist, you may find employment in one of the many organisations or industries employing psychologists with this kind of specialisation.

## Participation requirements

Students are required to complete a minimum of 1000 hours (approximately 133 days) of professional work experience within an approved organisational setting.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

Under the regulations of the Health Practitioner Regulation National Law Act 2009, Master of Psychology students are required to be provisionally registered from the commencement of enrolment and for the duration of enrolment in their degree. This is a mandatory requirement. Students should apply online for provisional registration with the Psychology Board of Australia as soon as they have been accepted into the degree. Alternatively, a paper form is available on the Board's website (see Application for provisional registration – APRO-76).

## Pathways

H752 is a post graduate course that has no immediate pathway to another Deakin course. Nearly 100% of graduates transition directly to full-time work. A small number of students with the research aptitude and interest enrol in the PhD program.

While not often applied for, Recognition of Prior Learning is available to applicants already possessing equivalent units from an APAC accredited Master of Psychology (Organisational) or equivalent degree, completed no more than ten years previously, and preferably within the last five years. Whether or not credit is granted will be determined by the equivalency of the content of the completed unit, as well as the equivalence of the applicant's performance to students who enrol in the Masters program in the usual manner. Students will not be granted credit for previous research experience, including completion of a Masters level thesis or a research higher degree.

Normally such applicants will be required to complete placements and all additional units needed to make the coursework component comparable with that of a Deakin Master of Psychology (Organisational) student. All students are required to complete at least eighteen months of full-time study and a minimum of fifty per cent of the total course content, including the thesis. Applications for advanced standing can be made in writing addressed to the course chair, and including a completed Recognition of Prior Learning application form, following enrolment and preferably prior to commencement of studies.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply an advanced and integrated theoretical and practical knowledge of the principles underlying organisational psychology in order to inform solutions to organisational issues.
Communication	Meaningfully communicate complex knowledge and ideas to clients, health professionals and other stakeholders that demonstrates sound judgement, adaptability and responsibility in various contexts.
Digital literacy	Apply advanced skills to select appropriate digital tools to find, use and disseminate information.
Critical thinking	Identify, analyse, critically evaluate and synthesise complex information, problems, ideas, concepts and theories in the field of organisational psychology.
Problem solving	Adapt knowledge and skills in diverse contexts to compare and contrast multiple approaches in problem solving; to select the appropriate methodology and use initiative to solve a range of diverse problems within the field of organisational psychology.
Self-management	Display high level of self-management through reflection, continual improvement and learning, and seeking appropriate supervision that reinforces the importance of responsibility and accountability for professional development.
Teamwork	Identify, establish and maintain collaborative professional relationships, demonstrating professionalism, responsibility and accountability, with a wide range of diverse client groups and other professionals.

Graduate learning outcomes	Course learning outcomes
Global citizenship	Demonstrate awareness and sensitivity to cultural, ethnic, religious, social and political backgrounds in order to enhance professional and ethical practice within diverse social, cultural and environmental contexts.

## Course rules

To complete the Master of Psychology (Organisational) students must attain 16 credit points covering three inter-related strands: theory, research and practice. All units are core (these are compulsory). The course has a strong emphasis on a practical problem-solving approach within a structure of organisational psychology units. Students will complete a minimum of 4 credit points each trimester over two years for full time study or part time equivalent.

Students are required to complete a minimum of 1000 hours (approximately 133 days) of professional work experience within an approved organisational setting.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

2016 course title change only. Students enrolled in H752 Master of Psychology (Industrial and Organisational) can follow this course structure.

### Level 1

#### Trimester 1

HAI010	Academic Integrity (0 credit points)
HPS726	An Introduction to Organisational Psychology
HPS758	Psychological Assessment in Organisations
HPS759	Issues in Professional Organisational Psychology
HPS785	Research Thesis A

#### Trimester 2

HPS722	Facilitation, Training and Evaluation in Organisations
HPS723	Organisational Placement 1
HPS724	Applied Methodology for Organisational Analysis
HPS792	Research Thesis B

### Level 2

#### Trimester 1

HPS721	Organisational Development and Change Management
HPS725	Organisational Placement 2
HPS793	Research Thesis C
HPS727	Organisational Intervention Strategies and Skills

#### Trimester 2

HPS728	Organisational Placement 3
HPS730	Occupational Health and Wellbeing
HPS794	Research Thesis D
HPY701	Leadership Assessment, Development and Coaching

Students are also expected to attend School Research Colloquia.

## Work experience

### Placement program

The placement program is designed to provide you with exposure to varying organisational problems and experiences. The placements are designed to equip you with a range of professional skills and develop an awareness of professional issues in applied settings. You will be exposed to the workings of different organisations and industries and the types of issues that arise in an organisational psychology setting. You will be involved in placements in different sectors including manufacturing, retail, finance, public service and consultancies. Contracts will be drawn up that will clearly specify the skills to be mastered, your responsibilities and the responsibilities of the placement supervisor/s. Each placement requires the full complement of days to be completed. Unsatisfactory progress in any one placement may result in exclusion from the course.

### Income support

Domestic students enrolled in this postgraduate coursework program may be eligible for student income support through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### Other learning experiences

Throughout the program students are invited and encouraged to participate in a range of independently provided professional accreditation activities. Students, for example, might complete workshops to gain accreditation in psychological assessment, leadership, and health and wellbeing programs.

### Research and research-related study

Research comprises 25% of the program. Students are required to pass four research units in order to be eligible to complete the degree. HPS785, undertaken in trimester 1 of the first-year full-time program, consists of a 7000-word literature review that is relevant to each student's chosen research topic. HPS792, undertaken in Trimester 2 of the first-year full-time program, requires students to present their research proposal to a panel of academics. HPS793, undertaken in Trimester 1 of the second year full-time program, requires a report demonstrating successful research progress. HPS794, undertaken in Trimester 2 of the second-year full-time program, requires successful completion of a 6000-word empirical research report.

# Master of Health and Human Services Management

<i>Year</i>	2019 course information

<i>Duration</i>	1–2 years full time or part-time equivalent, depending on Recognition of Prior Learning
<i>CRICOS course code</i>	056060C
<i>Deakin course code</i>	H756
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

This course sets you on track for the next step in your health career toward management and leadership.

Learn to make evidence-based decisions that focus on improving the quality of health service delivery – a sector that has seen strong growth in recent years.

Deakin’s Master of Health and Human Services Management focuses on business and management issues within health, making it the most relevant business administration course for the health sector.

This course is particularly well suited to those interested in working in the health and human services sector as well as those who currently hold senior positions in the industry.

You will develop core skills required for leadership and strategic planning, health needs assessment and evaluation, program planning and monitoring, resource and project management, communication and negotiation.

This course offers enormous flexibility, allowing you to choose elective study options that align with your career aspirations and interest areas. Elective units can be chosen from the health economics, public health, research and business administration elective groups.

There is also flexibility of choice between research and coursework, enabling you to construct a study program that best meets your interests and career aspirations.

## Indicative student workload

In the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Not applicable

## Career opportunities

As a graduate of this course you will be well prepared for management and leadership roles in public health, hospitals, welfare organisations, health services and the broader human health services sector, including government departments, health services and networks, local government and major health, welfare and human service delivery organisations. Recent graduates have gone on to work in international agencies with a presence in public health, divisions of general practice, health administration departments, hospitals and associated networks.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check or other check. Refer the relevant unit guide.

## Alternative exits

There are two alternative exit points available from H756 Master of Health and Human Services Management:

- H556 Graduate Certificate of Health and Human Services Management consisting of 4 credit points
- H656 Graduate Diploma of Health and Human Services Management consisting of 8 credit points

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply a critical and advanced knowledge in the area of Health and Human Services Management including research and current professional practices in the areas of: <ul style="list-style-type: none"> <li>• leadership and strategic planning,</li> <li>• evidence-based decision making,</li> <li>• health needs assessment and evaluation,</li> <li>• program planning and monitoring,</li> <li>• resource and project management,</li> <li>• communication and negotiation.</li> </ul>
Communication	Communicate effectively with a range of individuals and groups, using a variety of modes and methods in a Health and Human Service context.
Digital literacy	Select and use digital technologies to locate, evaluate and disseminate research to address complex health and human service management issues.
Critical thinking	Critically evaluate and synthesise complex information, problems, ideas, concepts and theories within a health and human services context.
Problem solving	Apply creative strategies to address complex and ill-defined health and human services management problems.
Self-management	Demonstrate critically reflective self-management with relevant workloads, commitments and timeframes while displaying a commitment to ethical health and human services management practice and lifelong learning.

Graduate learning outcomes	Course learning outcomes
Teamwork	Interact collaboratively and constructively with a diverse range of people across multiple teams and contexts to achieve targeted health and human services management outcomes.
Global citizenship	Demonstrate a critical awareness and sensitivity to cultural, ethnic, religious, social and political issues in health and human service management contexts.

## Course rules

To complete the Master of Health and Human Services Management students must attain 16 credit points. All units except Major Research Project units are equal to 1 credit point.

The course comprises 10 core units (these are compulsory) and 6 course-grouped elective units (you can choose which ones to study according to the prescribed units in each of the elective groups in the course structure).

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

This course structure applies to students commencing in 2019. Students who commenced in between 2015 and 2018 should refer to previous handbooks. Students who commenced prior to 2015 should refer to the H746 Master of Health and Human Services Management course entry.

HAI010	Academic Integrity (0 credit points)
HME704	Fundamentals of Health Informatics
HSH702	Contemporary Health Issues and Policies
HSH717	Health Economics 1
HSH719	Economic Evaluation 1
HSH725	Research Literacy for Health Practice
HSH762	Resource Allocation and Priority Setting
HME711	Health Law and Ethics
MPA702	Financial Interpretation
MPM701	Business Process Management
MPM722	Human Resource Management

### Electives

The MHHSM has four elective groups: Public Health, Health Economics, Business Administration and Research Pathway. Students must choose one of the following elective groups, in addition to the ten core units.

#### *Public Health elective group*

HSH701	Principles and Practice of Public Health
HSH744	Epidemiology 1
HSH746	Biostatistics 1
HSH769	Comparative Health Systems

Plus two units from:

- HME712 Healthcare Operations
- HSH703 Health Promotion
- HSH709 Health and Social Impact Assessment
- HSH728 Health Equity and Human Rights
- HSH731 Minor Project A -must be taken as a pair with HSH732
- HSH732 Minor Project B – must be taken as a pair with HSH731
- HSH760 International Perspectives in Health and Social Development \*

\* Limited places in this unit are allocated based on an interview process and academic merit.

#### ***Health Economics elective group***

- HSH766 Economics and Health Policy Analysis
- HSH746 Biostatistics 1
- MPE781 Economics for Managers

Plus three units from:

- HME712 Healthcare Operations
- HSH763 Financing Health Care
- HSH764 Economic Evaluation – Theory and Practice
- HSH768 Health Economics in a Global Context
- HSH769 Comparative Health Systems
- HSH761 Health Technology Assessment 1

#### ***Business Administration elective group***

- MPE781 Economics for Managers
- MPM703 Business Strategy and Analysis
- MPM732 Critical Thinking for Managers

Plus one unit from:

- MWL701 Business Internship Experience
- MWL702 Business Practicum
- MWL703 Team Internship
- MWL704 Work Based Learning

Plus two units from:

- HME712 Healthcare Operations
- HSH763 Financing Health Care
- HSH766 Economics and Health Policy Analysis
- MPK732 Marketing Management
- MPM731 Business Communication for Managers

#### ***Research elective group\****

- HSH744 Epidemiology 1
- HSH746 Biostatistics 1
- HSH733 Major Project A
- HSH734 Major Project B

\* Students choosing this option must obtain approval from the course director and have a Weighted Average Mark (WAM) of 70 or more

## **Work experience**

Students who select the Business Management elective group are required to complete a one credit point work integrated learning unit coded MWL\*\*\*.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

It is possible to complete an international study tour as an elective within the Public Health elective group.

HSH760 International Perspectives in Health and Social Development \*

\* Limited places in this unit are allocated based on an interview process and academic merit.

## Research and research-related study

The number of units dedicated to research-related study and independent research varies by elective group from a minimum of 2 units to a maximum of 8 units.

# Master of Public Health

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Public Health
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1–2 years full-time or part-time equivalent, depending on your recognition for prior learning.
<i>CRICOS course code</i>	020018B
<i>Deakin course code</i>	H757
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Deakin's Master of Public Health will help you develop an understanding of global public health challenges. You will learn strategies and practical techniques to take action on these challenges, prevent diseases and promote the conditions that optimise population health. Many students enrol in this program to progress in their current roles or to obtain senior positions. The course is ideal for both clinical and non-clinical health professionals, as well as graduates from a wide range of other fields who are looking for 'bigger picture' approaches to enhancing the health of individuals, communities and populations. Are you interested in developing health-promoting environments, identifying public health priorities, generating initiatives for policy and action, and developing interventions that ensure equity in the health system? Then Deakin's MPH is for you.

The degree's flexible structure (half core and half electives) allows you to tailor your degree to suit your own interests and career aspirations. You can choose your electives from the many units offered across one or more pathways to build your public health skill set.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Not applicable

## Career opportunities

Public Health practitioners work in international organisations such as the WHO, UNDP and UNICEF; the non-government sector (e.g. organisations focussed on cancer, tobacco, drugs, reproductive health, obesity, food security, violence, HIV); the government sector; local councils, and other diverse settings. The MPH also provides the opportunity to pursue a PhD and a career in academia.

## Participation requirements

Elective units involving internships or collaborative research and work based training arrangements can occur at any time including during standard holiday breaks. See Deakin's website for further details.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check. Please refer to the relevant unit guide.

## Pathways

Pathways are offered in six areas:

- applied research
- health promotion
- public health practice
- health economics and management
- environments for health
- public health nutrition

## Alternative exit points

There is an alternative exit point available from H757 Master of Public Health:

- H547 Graduate Certificate of Public Health

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply advanced and integrated knowledge of public health theory, policy, surveillance, disease control and prevention, research principles, and recent public health developments in Australia and globally to practice and scholarship.
Communication	Demonstrate communication skills to justify theoretical propositions, issues and influences on public health in an effective and coherent manner to specialist and non-specialist audiences.
Digital literacy	Demonstrate digital literacies in public health practice and scholarship to interpret and transmit knowledge, skills and ideas to specialist and non-specialist audiences.
Critical thinking	Critically evaluate a range of complex public health evidence, theory and solutions at an abstract level.
Problem solving	Using appropriate analytical and research methods, develop and evaluate strategies to prevent disease and injury and protect and improve health.
Self-management	Demonstrate effective self-management skills, autonomy and accountability that contribute to the development of lifelong learning in public health.

Graduate learning outcomes	Course learning outcomes
Teamwork	Apply teamwork, leadership and management skills and principles to work effectively in a team environment and with others from a range of disciplines and backgrounds.
Global citizenship	Apply ethically appropriate research and practice skills to the appraisal of public health related issues and generate appropriate and culturally sensitive responses.

## Course rules

To complete the Master of Public Health students must attain 16 credit points.

The course comprises 8 core units (these are compulsory) and 8 elective units. Recognition of Prior Learning can be granted depending on previous studies and professional experience.

All core units will be offered in both campus and online (Cloud) mode. The majority of electives will be offered in both campus and online (Cloud) mode. Some units may be offered in block mode.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

Students commencing prior to 2015 should refer to the H747 Master of Public Health course handbook entry.

All students must complete the following core units and one zero credit point unit:

HAI010	Academic Integrity (0 credit points)
HSH701	Principles and Practice of Public Health
HSH702	Contemporary Health Issues and Policies
HSH703	Health Promotion
HSH725	Research Literacy for Health Practice
HSH728	Health Equity and Human Rights
HSH744	Epidemiology 1
HSH746	Biostatistics 1
HSH769	Comparative Health Systems

### Elective units

Students must choose eight additional credit points of elective study from the Prescribed elective list below. Elective credit points may be chosen from within or across the fields of study listed.

Any student wishing to undertake an elective not included in this prescribed list should seek approval from the course director.

Students interested in pursuing a research focus should undertake a Minor or Major Project in place of some of the prescribed electives. If undertaking a Minor Project (worth 2 credit points) students complete HSH731, HSH732 and 6 prescribed electives from the list below.

If undertaking a Major Project (worth 4 credit points) students complete HSH733, HSH734 and 4 prescribed electives from the list below.

## Prescribed electives

### *Public Health Practice*

HSH712	Alcohol, Tobacco, and other Drugs
HSH709	Health and Social Impact Assessment
HSH717	Health Economics 1
HSH719	Economic Evaluation 1
HSH724	Healthy Cities and Urban Communities
HSH739	Global Health Policy and Planning
HSH745	Health Program Evaluation
HSH747	Biostatistics 2
HMF701	Agricultural Health and Medicine
HSH754	Epidemiology 2
HSH760	International Perspectives in Health and Social Development

### *Health Promotion*

HSH704	Health Communication
HSH705	Needs Assessment and Health Program Planning
HSH709	Health and Social Impact Assessment
HSH712	Alcohol, Tobacco, and other Drugs
HSH715	Qualitative Health Research
HSH724	Healthy Cities and Urban Communities
HSH736	Community Consultation and Participation
HSH739	Global Health Policy and Planning
HSH745	Health Program Evaluation
HSH760	International Perspectives in Health and Social Development *

\* Limited places in this unit are allocated based on an interview process and academic merit.

### *Health Economics and Management*

HSH709	Health and Social Impact Assessment
HSH717	Health Economics 1
HSH719	Economic Evaluation 1
HSH739	Global Health Policy and Planning
HSH745	Health Program Evaluation
HSH747	Biostatistics 2
HSH761	Health Technology Assessment 1
HSH762	Resource Allocation and Priority Setting
HSH764	Economic Evaluation – Theory and Practice
MPE781	Economics for Managers
MPM701	Business Process Management

### *Applied Research*

HSH709	Health and Social Impact Assessment
HSH715	Qualitative Health Research
HSH719	Economic Evaluation 1
HSH745	Health Program Evaluation
HSH747	Biostatistics 2
HSH754	Epidemiology 2

***Public Health Nutrition***

HSN701	Principles of Nutrition
HSN702	Lifespan Nutrition
HSN705	Public Health Nutrition
HSN706	Food Policy and Public Health
HSN708	Nutrition Promotion
HSN713	Food, Nutrition and Behaviour
HSN714	Systems Thinking in Public Health Nutrition
HSN734	Obesity Prevention
HSN738	International Nutrition

***Humanitarian Assistance***

AHL701	The Humanitarian World
AHL705	Management of Humanitarian Health Programs
AHA725	Project and Financial Management in Humanitarian Contexts
AHA721	Dynamics and Dilemmas of the Humanitarian Sector
AHA722	Applied Humanitarian Assistance: From Theory to Practice
AHA723	Fundamentals of Humanitarian Management
AHA724	Disaster Risk Reduction and Management in Humanitarian Contexts

***Disability and Inclusion***

HDS730	Disability and Inclusion: Contemporary Theory and Lived Experience
HDS731	Planning for Inclusion Across the Life Course
HDS732	Determinants of Health and Wellbeing in the Lives of People with Disability
HDS733	Community Capacity Building – Theory and Practice for Inclusion
HDS734	Inclusive Design and Technology
HDS735	Inclusive Engagement: Advocacy and Participation
HDS736	Disability Research – Inclusive Approaches

**Work experience**

Many units incorporate work-integrated learning activities Internships and collaborative research and work based training arrangements are also available for eligible students with a Weighted Average Mark (WAM) of 70+. Limited places are allocated based on academic merit.

**Income support**

Domestic students enrolled in this postgraduate coursework program may be eligible for student income support through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

**Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

**Other learning experiences**

It is possible to complete an international study tour as an elective unit.

- HSH760 International Perspectives in Health and Social Development.

Limited places are allocated based on an interview process and academic merit.

# Master of Health Promotion

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Health Promotion
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>

<i>Cloud Campus</i>	Yes
<i>Duration</i>	<p>Depending on your professional experience and previous qualifications, the Master of Health Promotion is typically 1, 1.5 or 2 years duration.</p> <ul style="list-style-type: none"> <li>• 1 year full time (2 years part time) – 8 credit points</li> <li>• 1.5 years full time (3 years part time) – 12 credit points</li> <li>• 2 years full time (4 years part time) – 16 credit points</li> </ul> <p>Deakin courses can also be studied part time over a longer period.</p>
<i>CRICOS course code</i>	069327G
<i>Deakin course code</i>	H759
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Get the knowledge and skills to develop evidenced-based health promotion programs.

Preventing illness and promoting health are major aspects of the work of health agencies in all developed and developing countries. You will examine strategies that help people take action about their own health, strengthen community action and create environments that are more supportive of health. These include policy environments, physical environments, social environments and economic environments.

This course also offers you the option of undertaking a major or minor project. These projects allow you to apply the knowledge and skills developed in the coursework component of the degree to a significant health issue by commencing a comprehensive literature review, industry-linked project or a research project.

Deakin's Master of Health Promotion focuses on your professional development. Our partnerships with local industry give you access to cutting-edge health promotion practice, enhance your health promotion skills and help you develop attributes valued by employers such as critical analysis, creativity, reflective practice and lifelong learning.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Graduates may be eligible to apply for membership of the Australian Health Promotion Association (AHPA) and the International Union of Health Promotion and Education.

*Note: All information regarding professional recognition is accurate at the date of publication. Enquiries regarding accreditation and professional membership should be directed to the School of Health and Social Development in order to ascertain the current status of accreditation at any future point in time beyond publication. Representations about accreditation apply only to the course, and the relevant professional body retains discretion as to who they admit as members of their association. Deakin University cannot exercise any control over membership of an external body.*

## Career opportunities

Following successful completion of the Master of Health Promotion, you will be qualified to take advantage of the career opportunities that exist world-wide in national and international health organisations; medium-sized businesses; multinational corporations; community organisations; human services agencies; local, state and federal government departments; statutory authorities; and Non-Government Organisations (NGOs).

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a National Police Record Check, a Working with Children Check or other check. Refer the relevant unit guide.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Apply a critical and advanced knowledge in the area of health promotion that includes:</p> <ul style="list-style-type: none"> <li>theories of behaviour change, inequalities and inequities in health,</li> <li>the action areas for health promotion,</li> <li>the determinants of health (biological, behavioural and socio-environmental),</li> <li>the biomedical, behavioural and socio-environmental models of health and their relevance to health promotion practice in general and needs assessment in particular,</li> <li>stages of program planning, implementation, evaluation and sustainability,</li> <li>awareness of how health promotion practice is influenced, such as, ethnicity and Indigenous status, age, gender, society, culture, geography, the environment and socio-economic status.</li> </ul>
Communication	<p>Communicate on health promotion issues in an effective and coherent manner, attentive to the needs of the target audience.</p> <p>Develop effective communication skills relevant for the professional health sector.</p>

Graduate learning outcomes	Course learning outcomes
Digital literacy	Demonstrate mastery in current technologies to discover, select, analyse, employ, evaluate, and disseminate technical and non-technical information applicable to health promotion.
Critical thinking	Demonstrate critical thinking to evaluate, using appropriate analytical and research methods, health promotion problems and solutions for individuals and communities.
Problem solving	Apply theoretical constructs and critical analysis to real-world and ill-defined problems and develop innovative health promotion solutions.
Self-management	Apply knowledge and skills in creative ways to adapt to new situations in professional practice and/or plan for further learning in the field of health promotion.
Teamwork	Work effectively within health promotion and multi-disciplinary teams with others from a range of backgrounds
Global citizenship	Apply the highest ethical standards in the development, design, construction and management of health promotion programs for Australia or elsewhere.

## Course rules

The Master of Health Promotion is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

To complete the Master of Health Promotion students must attain 16 credit points.

The course comprises 8 core units (these are compulsory) and 8 elective units (which must include a minor or major project).

The majority of core and elective units will be offered in Cloud (online) and campus mode. Some units may also be offered in block mode.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

This course is offered to students commencing in 2015 onwards. Students who commenced prior to 2015 should refer to the H749 Master of Health Promotion course entry.

HAI010	Academic Integrity (0 credit points)
HSH703	Health Promotion
HSH704	Health Communication
HSH705	Needs Assessment and Health Program Planning
HSH725	Research Literacy for Health Practice
HSH745	Health Program Evaluation
HSH702	Contemporary Health Issues and Policies
HSH715	Qualitative Health Research
HSH728	Health Equity and Human Rights

## Projects and elective study options

Students must choose eight additional credit points of elective study, completed as either Option A or Option B.

### *Option A*

- HSH731 Minor Project A (1 credit point)
- HSH732 Minor Project B (1 credit point)

Plus 6 electives from the elective unit options table below

### *Option B*

- HSH731 Minor Project A (1 credit point)
- HSH732 Minor Project B (1 credit point)
- HSH733 Major Project A (2 credit points)
- HSH734 Major Project B (2 credit points)

Plus 2 electives from the elective unit options table below

## Elective unit options

- HSH717 Health Economics 1
- HSH719 Economic Evaluation 1
- HSH744 Epidemiology 1
- HSH746 Biostatistics 1
- HSH747 Biostatistics 2
- HMF701 Agricultural Health and Medicine
- HSH701 Principles and Practice of Public Health
- HSH709 Health and Social Impact Assessment
- HSH724 Healthy Cities and Urban Communities
- HSH761 Health Technology Assessment 1
- HSH769 Comparative Health Systems
- HSH739 Global Health Policy and Planning

## *Nutrition*

- HSN701 Principles of Nutrition
- HSN705 Public Health Nutrition
- HSN713 Food, Nutrition and Behaviour
- HSN702 Lifespan Nutrition
- HSN706 Food Policy and Public Health
- HSN734 Obesity Prevention

## Other elective units

Any students wishing to undertake 2 or more of these electives should first speak with the Course Director or Student Advisor to discuss the rationale behind their chosen electives and pathway.

## *Disability and Inclusion*

- HDS732 Determinants of Health and Wellbeing in the Lives of People with Disability
- HDS730 Disability and Inclusion: Contemporary Theory and Lived Experience
- HDS733 Community Capacity Building – Theory and Practice for Inclusion
- HDS731 Planning for Inclusion Across the Life Course
- HDS736 Disability Research – Inclusive Approaches

## *Planning*

- SRP782 Smart Cities and Infrastructure
- SRD761 Designing Urban Environments
- SRM781 Managing Change and Innovation
- SRP761 Ecological Cities and Futures
- SRP781 Planning Processes and Practice
- SRL733 Indigenous Narratives and Processes

### *Humanitarian*

AHL701	The Humanitarian World
AHL705	Management of Humanitarian Health Programs
AHA725	Project and Financial Management in Humanitarian Contexts
AHA721	Dynamics and Dilemmas of the Humanitarian Sector
AHA722	Applied Humanitarian Assistance: From Theory to Practice
AHA723	Fundamentals of Humanitarian Management
AHA724	Disaster Risk Reduction and Management in Humanitarian Contexts

### **Work experience**

Students will undertake work integrated assessment tasks in several core and elective units. All students also undertake a capstone minor or major project.

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### **Other learning experiences**

Internships are also available to students with WAM 70 and above.

### **Research and research-related study**

Research related study is undertaken in core units: HSH725 Research Literacy for Health Practice, HSH715 Qualitative Health Research, HSH731 Minor Project A and HSH732 Minor Project 2 (1 credit point each). Students can also elect to undertake HSH733 Major Project A and HSH734 Major Project B (2 credit points each). Research is also embedded in most core units and electives.

# Master of Nursing Practice

Year	2019 course information
Award granted	Master of Nursing Practice
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	This course is only offered in Cloud (online) mode
Cloud Campus	Yes
Duration	1.5 years full time or up to 4 years part time, depending on your entry point
Deakin course code	H771
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*Students enrol in Cloud (online), however for those undertaking a specialist course (critical care or perioperative) there are also significant on campus requirements – refer to individual unit details in the course structure for more information*

## Course overview

The Master of Nursing Practice aims to broaden and deepen theoretical and practice knowledge of registered nurses who work in a variety of specialty health care settings (such as Intensive Care, Cardiac Care, Emergency Care, Critical Care, and Perioperative nursing) or those desiring a career in nursing management, governance or leadership. Specialisation is optional and can be taken at a certificate or diploma level. Students wishing to complete a Master of Nursing Practice will choose either the Master of Nursing Practice (Minor Thesis) or Master of Nursing Practice (Coursework) pathway.

The Master of Nursing Practice aims to prepare graduates to practise effectively at an advanced practice level. Graduates will demonstrate ethical, safe, high quality, expert clinical decision making within an interdisciplinary team, and psychomotor skills commensurate with specialised theoretical knowledge, evidence-based practice and person or client-centred care. The course provides research training, as well as leadership and specialty expertise, to equip graduates for management, governance, education and leadership roles, and the requirements to undertake higher degrees by research such as a Doctor of Philosophy (PhD).

The course is predicated on the notion that registered nurses should practise in ways that extend beyond the technical and practical concerns of nursing and to provide leadership, research-based practice and advanced decision making as part of the multidisciplinary health team. This course therefore provides research training as well as leadership and specialty expertise to equip students for leadership roles, and the requirements to undertake higher degrees by research. The course has been designed with a flexible structure that allows students to choose from several sequences of study and/or from a range of units that support their career aspirations.

Studies can be undertaken in a variety of general acute care wards, educational, managerial, community and specialty critical care settings. The latter includes Intensive Care Units, Cardiac Catheter Laboratories, Cardiac Care Units, Emergency Departments, Critical Care Units, Operating Suites and Post Anaesthetic Care Units. Registered nurses delivering care to patients or clients in any setting will have the opportunity to extend their practice skills in the areas of advanced patient assessment skills, clinical decision making and diagnostic reasoning.

Eligible graduates of the Master of Nursing Practice can also seek endorsement as a nurse practitioner via Pathway 2. To apply via Pathway 2, a program of study substantially equivalent\* to a specific Nurse Practitioner Masters course is required by the NMBA (Registration standard: Endorsement as a nurse practitioner NMBA 2016). A definition of substantially equivalent is outlined in the below statement. The eligibility of students for endorsement is subject to meeting the requirements of the NMBA. Deakin University makes no representation that students will meet those requirements.

\* A program that is substantially equivalent means a postgraduate nursing master's degree that is relevant, clinically, to the context of the applicant's advanced nursing practice, for which they are seeking endorsement as a nurse practitioner, and who have completed appropriate supplementary education. Supplementary education includes advanced health assessment, pharmacology for prescribing, therapeutics and diagnostics and research, however titled. Applicants will need to map evidence for assessment against the Nurse practitioner standards for practice (NMBA, 2016).

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course. For those enrolled in critical care and perioperative courses, you will also be required to attend Burwood (Melbourne) campus – refer to individual unit details in the course structure for more information.

## Professional recognition

A Master degree is not a professional accreditation requirement. Enrolment in a Master degree course offers students a competitive edge in the job market and improves chances of promotion

## Career opportunities

Deakin's postgraduate courses have been developed in collaboration with our industry partners, ensuring the teaching and learning is relevant to today's industry needs. After successfully completing your chosen course you will have a qualification that is highly respected by industry and academia, and you will be qualified to gain employment within your chosen speciality in all states and territories of Australia, as well as overseas.

Health care reforms and workforce restructure in Australia, are clearly on the agenda of health policy makers to ensure the health workforce is appropriate for health care delivery in the 21st century. Increasingly it is evident to governments that registered nurses with advanced knowledge, complex decision making skills and clinical competencies for advanced practice can make a significant contribution to health care delivery and the sustainability of the Australian health system. Masters level preparation will further develop nurses' skills to solve novel problems, think critically, autonomously exercise professional judgement and assume new roles which will enable them to contribute to the provision of safe, high quality, innovative and flexible health care delivery. Nurses with Masters level qualifications, working collaboratively in multidisciplinary teams, complement care provided by other health professionals, thereby promoting better patient outcomes.

## Participation requirements

For the units pertaining to specialty courses, there are some on campus requirements. For those students not located close to Deakin Burwood, students are able to join and participate in classroom activities virtually via VMP and other similar technologies.

Placement can occur at any time, including during the standard holiday breaks listed here:  
[deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Students in specialty courses i.e. critical care, perioperative nursing, intensive care, emergency and cardiac care nursing are employed by health services where a National Police Record Check and a Working with Children Check are required for employment.

## Pathways

This course can provide a pathway option to higher degree by research courses and other postgraduate coursework programs.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate ethical, safe, high quality, clinical decision making within an interdisciplinary team and psychomotor skills commensurate with general or specialised theoretical knowledge, evidence-based practices and person or client-centred care.
Communication	Demonstrate expertise in verbal, written and interpersonal communication skills using discipline-specific language and lay-terms necessary to assess and interpret data, convey ideas, develop plans of care and implement therapeutic interventions to ensure the delivery of high quality, safe general or specialised nursing care to patients/ clients.
Digital literacy	Use appropriate technologies to locate authoritative discipline-specific information and justify the selection of this information; and demonstrate expertise in the ability to evaluate, synthesise and disseminate the information to members of the interdisciplinary health team, and general or specialised patients/clients in an ethical and professional manner.
Critical thinking	Demonstrate expertise in identifying, synthesising, analysing and critically evaluating complex data from multiple sources (e.g. healthcare team members, patients, digital technologies) to inform decision making in general or specialist areas that delivers safe, ethical high quality nursing care in order to promote optimal patient/client outcomes.
Problem solving	Effectively apply expert nursing knowledge and skills to routine, complex and ill-structured problems in general and specialised settings to achieve optimal patient/client outcomes.
Self-management	Demonstrate high level personal autonomy, leadership, expert clinical judgement, professionalism, responsibility, accountability, and reflection as general or specialised nurse.
Teamwork	Establish and maintain collaborative professional respectful relationships demonstrating professionalism, expertise, highly developed communication skills, leadership, responsibility and accountability to the interdisciplinary team, patients/clients and carers.
Global citizenship	Display accountability for, and expert professional judgement in behaviours that uphold ethical and legal principles of practice within diverse social, cultural and environmental contexts.

## Course rules

To complete the Master of Nursing Practice students must attain 12 credit points, chosen from a suite of units. HNN727 Research in Nursing and Midwifery, a 2 credit point unit, is core. Students may choose either the Master of Nursing Practice (Minor Thesis) or Master of Nursing Practice (Coursework) pathway.

For coursework units, at least 6 of the 12 credit points must normally be level 7 nursing units from the list below. Up to 4 credit points may be selected from the elective units listed or approved units from any postgraduate course at Deakin.

Students wishing to complete the Master of Nursing Practice including a minor thesis must complete HNN727 Research in Nursing and Midwifery (2 credit points). Providing the student meets academic entry requirements, students may then undertake the 4 credit-point minor thesis (HNN756 Nursing Research Thesis A, HNN757 Nursing Research Thesis B, HNN758 Nursing Research Thesis C and HNN759 Nursing Research Thesis D).

Students considering application for endorsement as a nurse practitioner under Pathway 2 are encouraged to complete units indicated (\*\*\*) in the list under Master of Nursing Practice without specialisation. Students will have completed post graduate clinical studies to a graduate certificate level prior to undertaking these units.

All commencing Faculty of Health Undergraduate and Postgraduate course work students are required to complete HAI010 Academic Integrity in their first trimester of study (0 credit point compulsory unit).

The Master of Nursing Practice can be undertaken over 1½ years full time or 4 years part-time. Students wishing to seek employment in the specialty practice areas must undertake core specialty units and may exit either at the Graduate Certificate or Graduate Diploma level.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Specialty Practice Critical Care units

Please note that specialist streams are not available for international students.

Applicants wishing to undertake the intensive care, cardiac care or emergency care or critical care specialty courses at Certificate level in the Master of Nursing Practice must also independently apply for and seek permanent employment with a collaborating hospital within their specialty area. Offers to undertake these specialisations will not be issued until written confirmation of this support by a collaborating hospital has been received by Deakin University.

Students must be employed on a permanent basis undertaking at least 24 hours clinical practice per week in their specialty area.

### Specialty units (core)

#### Trimester 1

- HAI010 Academic Integrity (0 credit points)
- HNN751 Advanced Physiology and Patient Assessment
- HNN752 Core Principles of Care for the Critically Ill Patient
- HNN750 Inquiry Into Specialty Nursing Practice (required if taking alternative exit at Graduate Diploma level)

#### Trimester 2

- HNN765 Cardiac Care Nursing 1 \*
- HNN775 Cardiac Care Nursing 2
- HNN767 Critical Care Nursing 1 \*\*
- HNN777 Critical Care Nursing 2 \*\*
- HNN766 Emergency Care Nursing 1 +
- HNN776 Emergency Care Nursing 2 +
- HNN764 Intensive Care Nursing 1 #
- HNN774 Intensive Care Nursing 2 #
- HNN788 Advanced Concepts in Specialty Nursing Practice (required if taking alternative exit at Graduate Diploma level)

## Master units (core)

HNN727 Research in Nursing and Midwifery ^ (2 credit points)

## Master elective coursework units – maximum 6

Each unit is worth 1 credit point unless otherwise specified. Offering is subject to demand and resources

### Trimester 1

HNN714 Ethical Dimensions in Nursing and Midwifery  
 HNN730 Advanced Health Assessment and Diagnostic Reasoning  
 HNN749 Patient Safety and Risk Management  
 HNN781 Therapeutic Medication Management  
 HND701 Pathophysiology of Diabetes  
 HND732 Diabetes in Social and Psychological Contexts  
 HNN771 Facilitating Clinical Learning  
 HNN772 Healthcare in Low Resource/Complex Environments

### Trimester 2

HNN704 Clinical Leadership and Collaborative Practice (incompatible with HNN715)  
 HNN715 Leadership and Management in Nursing (incompatible with HNN704)  
 HNN732 Clinical Research Methods (incompatible with HNN727)  
 HNN733 Clinical Excellence in Nurse Practitioner Practice  
 HNN780 Quality and Safety in Medication Management  
 HND702 Management of Diabetes  
 HND731 Learning and Teaching for Health Professionals (includes 3 day intensive workshop held in T1/T2 inter-trimester break)  
 HNN773 Healthcare Management of Vulnerable Populations

## Thesis units

All units are available in Trimester 1 and Trimester 2

HNN756 Nursing Research Thesis A  
 HNN757 Nursing Research Thesis B  
 HNN758 Nursing Research Thesis C  
 HNN759 Nursing Research Thesis D

\* Core specialty units for Cardiac Care specialty

\*\* Core specialty units for Critical Care specialty

+ Core specialty units for Emergency Care specialty

# Core specialty units for Intensive Care specialty

^ This is a core (compulsory) unit for all students in the Master of Nursing Practice

## Specialty Practice Perioperative units

Applicants wishing to undertake the perioperative specialty stream at Graduate Certificate level in the Master of Nursing Practice must also independently apply for and seek permanent employment with a collaborating hospital within their specialty area. Offers to undertake these specialty streams will not be issued until written confirmation of this support by a collaborating hospital has been received by Deakin University.

Students must be employed on a permanent basis undertaking at least 24 hours clinical practice per week in their specialty area.

*Please note that specialist streams are not available for international students.*

## Specialty units (core)

### Trimester 1

HNN755 Core Principles of Perianaesthesia Nursing Care  
 HNN740 Core Principles of Intraoperative Nursing Care  
 HNN750 Inquiry Into Specialty Nursing Practice

### Trimester 2

HNN742 Principles of Complex Perianaesthesia Nursing Care  
 HNN743 Principles of Complex Intraoperative Nursing Care  
 HNN788 Advanced Concepts in Specialty Nursing Practice

## Master units (core)

HNN727 Research in Nursing and Midwifery (2 credit points)^

## Master elective units – maximum 6

Each unit is worth 1 credit point unless otherwise specified. Offering is subject to demand and resources.

### Trimester 1

HNN714 Ethical Dimensions in Nursing and Midwifery  
HNN730 Advanced Health Assessment and Diagnostic Reasoning  
HNN749 Patient Safety and Risk Management  
HNN781 Therapeutic Medication Management  
HND701 Pathophysiology of Diabetes  
HND732 Diabetes in Social and Psychological Contexts  
HNN771 Facilitating Clinical Learning  
HNN772 Healthcare in Low Resource/Complex Environments

### Trimester 2

HNN704 Clinical Leadership and Collaborative Practice (incompatible with HNN715)  
HNN715 Leadership and Management in Nursing (incompatible with HNN704)  
HNN732 Clinical Research Methods (incompatible with HNN727)  
HNN733 Clinical Excellence in Nurse Practitioner Practice  
HNN780 Quality and Safety in Medication Management  
HND702 Management of Diabetes  
HND731 Learning and Teaching for Health Professionals (includes 3 day intensive workshop held in T1/T2 inter-trimester break)  
HNN773 Healthcare Management of Vulnerable Populations

## Thesis units

All units are available in Trimester 1 and Trimester 2

HNN756 Nursing Research Thesis A  
HNN757 Nursing Research Thesis B  
HNN758 Nursing Research Thesis C  
HNN759 Nursing Research Thesis D

## Master of Nursing Practice without specialisation

### Master units (core)

HNN727 Research in Nursing and Midwifery (2 credit points)^

### Master elective units – maximum 10

Each unit is worth 1 credit point unless otherwise specified. Offering is subject to demand and resources

### Trimester 1

HNN714 Ethical Dimensions in Nursing and Midwifery  
HNN730 Advanced Health Assessment and Diagnostic Reasoning \*\*  
HNN749 Patient Safety and Risk Management \*\*  
HNN781 Therapeutic Medication Management \*\*  
HND701 Pathophysiology of Diabetes  
HND732 Diabetes in Social and Psychological Contexts  
HNN771 Facilitating Clinical Learning  
HNN772 Healthcare in Low Resource/Complex Environments

## Trimester 2

HNN704	Clinical Leadership and Collaborative Practice (incompatible with HNN715)**
HNN715	Leadership and Management in Nursing (incompatible with HNN704)
HNN732	Clinical Research Methods (incompatible with HNN727)**
HNN733	Clinical Excellence in Nurse Practitioner Practice **
HNN780	Quality and Safety in Medication Management **
HND702	Management of Diabetes
HND731	Learning and Teaching for Health Professionals (includes 3 day intensive workshop held in T1/T2 inter-trimester break)
HNN773	Healthcare Management of Vulnerable Populations
HNN731	Contemporary Nurse Practitioner Role **

## Thesis units

All units are available in Trimester 1 and Trimester 2

HNN756	Nursing Research Thesis A
HNN757	Nursing Research Thesis B
HNN758	Nursing Research Thesis C
HNN759	Nursing Research Thesis D

^ Core unit for Master of Nursing Practice

\*\* Recommended units for students wishing to apply for endorsement as a nurse practitioner via Pathway 2 upon successful completion of the course

## Work experience

For those students undertaking units in the specialty courses, success in the course is contingent on the student having access to a suitable workplace in which to consolidate learning, enhance understanding, demonstrate skills and undertake assessments. Prior to entry to the course, each applicant's workplace is considered in terms of its suitability and capacity to provide students with the necessary supports. Ongoing support for educators in the workplace is also provided by Deakin staff.

## Fees – CSPs

Commonwealth Supported Places (CSPs) are limited and are dependent on Government funding received by the University. Therefore a CSP is not guaranteed to all domestic students. CSPs are awarded based on prior academic merit. No other factors will be considered

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

There are no optional learning experiences within the core units of the course.

## Research and research-related study

Students undertaking the full Masters of Nursing Practice the following units must be completed:

HNN727	Research in Nursing and Midwifery (2 credit points)
HNN756	Nursing Research Thesis A (1 credit point)
HNN757	Nursing Research Thesis B (1 credit point)
HNN758	Nursing Research Thesis C (1 credit point)
HNN759	Nursing Research Thesis D (1 credit point)

# Master of Nursing Practice (Nurse Practitioner)

Year	2019 course information
Award granted	Master of Nursing Practice (Nurse Practitioner)
Campus	Cloud (online)
Duration	2 years full-time or up to 4 years part-time
Deakin course code	H773
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*This course is offered to continuing students only from 2019 onwards.*

## Indicative student workload

As a student in a Cloud (online) course in the Faculty of Health you will be expected to spend 11–13 hours every week studying, interacting via CloudDeakin and completing assessment tasks for each unit in your course.

## Professional recognition

On successful completion of this course, you will be eligible to apply for endorsement as a nurse practitioner from AHPRA through the NMBA.

*Note: This course is currently accredited as at the date of publishing. The eligibility of students for endorsement is subject to meeting the requirements of the NMBA. Deakin University makes no representation that students will meet those requirements.*

## Career opportunities

Upon successful completion of the course, you will be able to work within collaborative multidisciplinary frameworks to provide the highest quality and standard of care.

## Participation requirements

Students must be engaged in practice for their clinical domain as a registered nurse or midwife on at least a half-time basis while undertaking the Nurse Practitioner sequence of core units of study. During the course, evidence of role extension must be maintained as specified by the NMBA, for endorsement as a Nurse Practitioner.

Students will be expected to nominate at least one clinical support person for the duration of their study and provide evidence of organisational support.

## Mandatory student checks

There are no mandatory student checks for this course.

## Pathways

This course provides a pathway to higher degree by research courses and other postgraduate coursework programs.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Apply knowledge, research and theory to demonstrate expert judgement as a Nurse Practitioner.</p> <p>Extend advanced nursing practice and knowledge according to the Nurse Practitioner Standards of Practice and other professional practice guidelines to meet endorsement requirements.</p>
Communication	Engage in ongoing leadership roles and responsibilities supported by effective communication with nurses, colleagues and other health professionals; for health policy encompassing the clinical domain and practice setting, state and federal governments as well as professional organisations.
Digital literacy	Use digital technologies to collect and select information using critical evaluation, research skills and evidence-based practice for the improvement of health outcomes of the patient/client and advancement of services.
Critical thinking	<p>Critically assess, plan, evaluate and reflect on practice as a Nurse Practitioner to discern and disseminate research in a professional capacity.</p> <p>Apply advanced critical and analytical thinking in health assessment, specific for the clinical domain of practice, enhanced by autonomy and accountability.</p>
Problem solving	Integrate evidence based practice, interdisciplinary knowledge and skills required for planning, implementation, management and evaluation of the effectiveness of individualised health care for the patient/client, applying problem-solving strategies for the delivery of the best possible care.
Self-management	Monitor and evaluate clinical proficiency, autonomy and accountability of practice supported by reflection on own practice to identify learning needs supported by continuing professional development.
Teamwork	Practice in a Nurse Practitioner role by applying referral and collaboration processes with colleagues and other health professionals; and embody a patient/client advocacy responsibility through collaborative care.
Global citizenship	Apply professionalism in the Nurse Practitioner role through an in-depth understanding of the diverse needs of the Australian community, including Aboriginal and Torres Strait Islander Peoples, using legal, ethical, socio-cultural and political dimensions for effective health care delivery.

## Course rules

To complete the Master of Nursing Practice (Nurse Practitioner) students must attain 12 credit points and may be taken over either a minimum of 2 years or up to 4 years part time study.

Applicants are required to hold a postgraduate qualification in a specialty field as preparation for advanced practice. Recognition of Prior Learning will be considered on an individual basis for applicants who have completed postgraduate tertiary studies.

A minimum of five years full time experience, three years full time equivalent experience in a specialty area of practice, and one year full time equivalent at an advanced level in a specialty area of practice is required as per Admission and Selection requirements.

Applicants are required to hold a postgraduate qualification in a specialty field that has prepared them for advanced practice prior to entry in the Master of Nursing Practice (Nurse Practitioner)

## Course structure

### Core units

Course structure for the core units of the Master of Nursing Practice (Nurse Practitioner), equivalent to 8 credit points of study, and where two units of study are completed concurrently. This load is part time. The course structure is:

#### Year 1

##### Trimester 1

HNN730 Advanced Health Assessment and Diagnostic Reasoning  
HNN731 Contemporary Nurse Practitioner Role

##### Trimester 2

HNN780 Quality and Safety in Medication Management  
HNN704 Clinical Leadership and Collaborative Practice

#### Year 2

##### Trimester 1

HNN749 Patient Safety and Risk Management  
HNN781 Therapeutic Medication Management

##### Trimester 2

HNN732 Clinical Research Methods  
HNN733 Clinical Excellence in Nurse Practitioner Practice

*Note: All units in the Nurse Practitioner sequence must be completed to be eligible for endorsement as Nurse Practitioner.*

## Work experience

During course enrolment you will be required to undertake clinical practice for your specialty domain, for at least 20 hours each week to support the extension of your advanced practice role. You will also be required to maintain records such as placement agreements, your placement experiences, assessment for competency; and clinical supervision.

## Income support

Domestic students enrolled in this postgraduate coursework program may be eligible for student income support through Youth Allowance and Austudy. Further information can be found at Deakin University's Fees website.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Philosophy

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Philosophy
<i>Campus</i>	Offered at Waurm Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	093847E
<i>Deakin course code</i>	H800

## Course overview

This elite intensive research degree in health and (bio-) medical sciences will provide students with the opportunity to pursue an independent investigative research project under the supervision of an academic staff member in the School of Medicine, along with coursework specifically designed to provide relevant skills in research design, communication, integrity and interpretation. This course will provide students with a dedicated pathway into PhD programs or into employment where deeper disciplinary knowledge and research skills are required.

The research projects that centre on the basis of health and disease span from basic gene discovery and molecular analysis, through to functional genomics and pre-clinical development, to clinical and population studies. This includes in the fields of immunity, infectious diseases, developmental biology, exercise physiology and metabolism, musculoskeletal biology, haematology, cancer, metabolic disease, neuroscience, molecular psychiatry and nanomedicine. Research projects may also be offered in the field of rural and regional medicine, general practice, chronic disease management, public health, medical education, epidemiology, farmer health, medical imaging, surgery and optometry.

## Indicative student workload

You should be able to commit 36 hours a week towards the Master of Philosophy degree. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor.

## Professional recognition

Not applicable

## Career opportunities

The Master of Philosophy is specifically designed to provide students from diverse undergraduate backgrounds with an opportunity to expand their knowledge base and become an independent researcher with specialized technical, critical thinking, communication and cognitive skills. These skills are highly sought by many employers, with the course providing students with a dedicated pathway into national and international PhD programs or into careers within academia, industry, medical research as well as government and non-government scientific agencies, both local and global.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	<p>Demonstrate an advanced and integrated understanding of a complex body of knowledge in a chosen area of research in the medical discipline.</p> <p>Plan and execute a substantial research project that demonstrates complex knowledge and application of medical research principles and methods.</p>
Communication	<p>Interpret and efficiently transmit knowledge, skills, ideas and data to specialist and non-specialist audiences using highly developed written and oral communication skills.</p> <p>Apply listening and effective communication skills to accommodate, encourage and answer questions from an audience and to defend research findings and propositions.</p>
Digital literacy	Use digital technologies to locate, curate, interpret and disseminate relevant evidence-based literature to formulate research hypotheses, concepts and theories.
Critical thinking	Critically analyse literature, research data and other information relevant to the medical discipline to develop a conceptual framework for a substantial research project.
Problem solving	<p>Demonstrate autonomy, well-developed judgement and responsibility to critically analyse, reflect upon and synthesise complex information, concepts and theories by planning and executing a substantial research project in the chosen field of study.</p> <p>Contribute to advancements in knowledge of the discipline through mastering the use of instruments and techniques, to collect, interpret, analyse, synthesise and disseminate research data and findings.</p>
Self-management	Demonstrate a high level of personal autonomy, professionalism and responsibility in the acquisition of knowledge and in the planning and execution of a research project and interpretation of its data and findings.
Teamwork	Demonstrate the ability to work collaboratively and effectively with research peers and non-specialist stakeholders to address complex real-world problems in a variety of settings.
Global citizenship	Demonstrate the application of knowledge and skills in conducting best-practice research of the highest ethical standards and in managing, sharing data and disseminating research findings across wider research and cultural communities.

## Course rules

A Master of Philosophy is awarded for an original contribution to knowledge achieved in two years of full-time study (or four years of part-time study).

To complete the Master of Philosophy must complete 4 credit points of research training coursework that includes research design, communication, integrity and interpretation, in addition to an independent research project under the supervision of a nominated supervisor.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Units

Must pass 12 credit points in:

HMH812 Research Thesis (2 credit point)

or

HMH813 Research Thesis (1 credit point)

Students will work continuously on their research project over a two-year period full-time or four year period part-time.

In addition, students need to complete 4 credit points of research training coursework units within the first year (FTE) of the course.

HMH810 Research Communication (2 credit points)

HMH811 Research Interpretation and Integrity (1 credit point)

And one of:

HMH800 Research Design (1 credit point)

or

HSH746 Biostatistics 1 (1 credit point)

or

HSH715 Qualitative Health Research (1 credit point)

## Work experience

Career Pathway Placements (internships) with industry partners, are offered as an elective, to all domestic and international HDR students. The timing of a proposed placement should be discussed with the supervisory team, and approved by the School HDR Coordinator.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Surgical Research

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Surgical Research
<i>Course Map</i>	If you require assistance with your course structure, please contact a Student Adviser.
<i>Campus</i>	Offered at Waurm Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	098424K
<i>Deakin course code</i>	H801
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9

## Course overview

This course of study leads to a Masters by Research degree, with the students drawn from qualified medical practitioners, surgeons in training and fellowship-trained surgeons. The program has a primary function in providing doctors with a structured training and experience in independent research, specifically in the surgical speciality. It also fulfils a secondary function in providing discipline-specific training for doctors with aspirations in surgery, and provides an option for students to gain some skills in clinical leadership, for future leadership roles in surgery and broader medicine. Research training and clinical leadership training will be carried out at the Waurm Ponds campus, with heavy utilisation of Cloud resources to support the teaching. Research activity, although coordinated from the Waurm Ponds campus, will mainly be carried out at the student's place of work, although the School of Medicine's Anatomy Laboratory will also be utilised where the Clinical Anatomy Investigation project involves cadaveric inspection or dissection. Primary supervision will be shared by academics within the School and other experts local to the workplace.

Through completion of the Master of Surgical Research it is expected that medical graduates, surgeons in training and qualified surgeons will:

1. gain an understanding of research techniques relevant to surgery;
2. produce high quality written work, suitable for publication in scientific journals, and present this orally to a high standard;
3. gain the skills needed to critically evaluate their own, and therefore other's, work;
4. demonstrate their ability to apply research techniques in surgery and to lead research work; and
5. develop, or consolidate, an advanced knowledge of human anatomy, as relevant to their discipline

## Indicative student workload

The course will be delivered online (Cloud mode) and at Geelong Waurm Ponds Campus and at hospitals and other health centre sites of Deakin's partner organisations, and of other healthcare organisations.

Approximately 2400 hours for the full 16 credit points of the course.

## Career opportunities

The course design has a primary function in providing doctors with a structured training and experience in independent research, specifically in the surgical specialities. It has a secondary function in providing discipline-specific research training for doctors who are seeking to enter surgical training programs, and provides an option for student to gain some skills in clinical leadership, for future leadership roles in surgery and broader medicine. Undertaking the course also helps students to develop future professional and research networks, both within Deakin and with Deakin's partner institutes.

## Participation requirements

There are no compulsory learning experiences, beyond the requirement to complete the standard research and research training activities in the core units of the course as specified. Students have the opportunity of choice in the selection of their project and work/study environment and can therefore tailor their study to any specific needs they may have.

## Mandatory student checks

Students will usually be required to provide evidence that they have the relevant Police Checks, Working With Children Checks, and immunisations to allow them to work with patients in a given health service. As students will be registered medical practitioners, these mandatory checks are usually a requirement of their professional registering body (e.g. AHPRA), thus these should already be in place.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Course learning outcomes	Deakin graduate learning outcomes
<p>Demonstrate an advanced and integrated understanding of a complex body of knowledge in surgical anatomy and the surgical discipline.</p> <p>Plan and execute a substantial research project in the surgical discipline that demonstrates complex knowledge and application of clinical and medical research principles, cognitive and technical skills, and methods.</p>	<p>Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.</p>
<p>Interpret and transmit knowledge, skills, ideas and data to specialist and non-specialist audiences using highly developed written and oral communication skills.</p> <p>Apply listening and effective communication skills to accommodate, encourage and answer questions from an audience and to defend research findings and propositions.</p>	<p>Communication: using oral, written and interpersonal communication to inform, motivate and effect change.</p>
<p>Use digital technologies to locate, curate, interpret and disseminate relevant evidence-based literature to formulate research hypotheses, concepts and theories.</p>	<p>Digital literacy: using technologies to find, use and disseminate information</p>
<p>Critically analyse literature, research data and other information relevant to surgical anatomy and the surgical discipline to produce a substantial research project.</p>	<p>Critical thinking: evaluating information using critical and analytical thinking and judgment</p>
<p>Contribute to advancements in knowledge of the discipline through mastering the use of instruments and techniques, to collect, interpret, analyse, synthesise and disseminate research data and findings.</p>	<p>Problem solving: creating solutions to authentic (real world and ill-defined) problems</p>

Course learning outcomes	Deakin graduate learning outcomes
Demonstrate a high level of personal autonomy, professionalism and responsibility in the acquisition of knowledge and in the planning and execution of research projects and interpretation of data and findings.	Self-management: working and learning independently, and taking responsibility for personal actions.
Demonstrate the ability to work collaboratively and effectively with research peers and non-specialist stakeholders to address complex real-world problems in surgery.	Teamwork: working and learning with others from different disciplines and backgrounds.
Demonstrate the application of knowledge and skills in conducting best-practice research of the highest ethical standards and in managing, sharing data and disseminating research findings across wider medical, research and cultural communities.	Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.

## Course rules

To complete the Master of Surgical Research students must attain 16 credit points, which comprise 15 credit points of core units and 1 credit point of electives, constituting either additional research on the project or a clinical leadership elective unit.

In the event of the award of credit toward the course, at least two thirds of the remaining credit points must comprise HME8XX Clinical Anatomy Investigation and/or HME8XX Research Project in Surgery core units.

## Course structure

### Units

- HMH800 Research Design
- HMH810 Research Communication (2 credit points)
- HMH811 Research Interpretation and Integrity
- HME803 Clinical Anatomy Investigation (2 credit points)
- HME806 Research Project in Surgery (2 credit points)
- HME807 Research Project in Surgery (4 credit points)
- HME805 Research Project in Surgery (1 credit point)
- HME806 Research Project in Surgery (2 credit points)

Plus one elective unit (1 credit point)

## Work experience

Students will usually carry out their mandatory research project work in their own work environment and sometimes through the process of carrying out their actual work duties.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Social Work (Research)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Social Work (Research)
<i>Campus</i>	Offered at Waterfront (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	072273A
<i>Deakin course code</i>	H803
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

If you are a qualified social worker, undertake further research training to develop expertise relevant to your practice.

A Masters by Social Work (Research) degree is awarded for a substantial, original contribution to knowledge achieved in up to two years of full-time study (or two to four years of part-time candidature).

Research areas include social work theory and practice, critical social work, evidence bases in social work, social work education, human services provision, child and family welfare, mental health, diversity and inclusivity, religion and spirituality, masculinities, gender relations and gender violence.

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their Masters by Research program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment.)

## Professional recognition

Not applicable

## Research information

The Faculty of Health provides a range of higher degree by research programs at masters and doctorate level, including professional doctorates in the discipline of psychology.

The Faculty has affiliation with six of the University Strategic Research Centres, which work with national and international partners in health communities, business, industry and government to bring about evidence-based practical, equitable health outcomes globally, nationally and in local communities. The Centres are engaged in research programs related to patient care, patient safety, health services, mental health, psychiatric disorders, molecular medicine, immunology, neurosciences, public health research and evaluation, population health, human nutrition, physical activity and health, and social determinants of health and wellbeing.

To review details of the Strategic Research Centres and the research we are undertaking visit Deakin's website.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Course learning outcomes	Deakin graduate learning outcomes
Demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating substantial contribution to knowledge through the use of appropriate research principles and methods.	<p>Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.</p> <p>Digital literacy: using technologies to find, use and disseminate information.</p> <p>Self-management: working and learning independently, and taking responsibility for personal actions.</p>
<p>Apply critical analysis and reflection to ethically research, synthesize and evaluate complex information, problems, concepts, interpretations and theories to demonstrate cognitive and technical skills in a body of knowledge or practice.</p> <p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p>	<p>Critical thinking: evaluating information using critical and analytical thinking and judgment.</p> <p>Problem solving: creating solutions to authentic (real world and ill-defined) problems.</p> <p>Teamwork: working and learning with others from different disciplines and backgrounds.</p>
Demonstrate autonomy, expert judgement, adaptability, initiative, resilience and responsibility as a practitioner or learner.	<p>Communication: using oral, written and interpersonal communication to inform, motivate and effect change.</p> <p>Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.</p>

## Course rules

A Masters by Research degree is awarded for a substantial, original contribution to knowledge achieved in up to two years of full-time study (or up to four years of part-time study).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Work experience

Career Pathway Placements (internships) with industry partners, are offered as an elective, to all domestic and international HDR students. The timing of a proposed placement should be discussed with the supervisory team, and approved by the School HDR Coordinator.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Nursing

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Nursing
<i>Campus</i>	Offered at Burwood (Melbourne), Waterfront (Geelong), Warrnambool
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1.5 years full-time or part-time equivalent
<i>CRICOS course code</i>	006254G
<i>Deakin course code</i>	H821
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Make a significant contribution to nursing by undertaking research that is grounded in clinical practice.

This degree is conducted in the School of Nursing and Midwifery who through its clinical partnership program and community links, has an established research program in quality and patient safety research.

A major foci of the research programs are organized into three themes that apply to all practice environments: Patient Experience, Patient Safety and Workforce Development.

A Master of Nursing degree is awarded for a substantial, original contribution to knowledge achieved in up to two years of full-time study (or two to four years of part-time candidature).

The Master of Nursing is an approved program of research involving a substantial written thesis on the topic of your choice and under expert supervision. The degree is assessed on the result of thesis, with minimal or no coursework component required.

This degree is ideal if you are looking to embark on a career in research and academia.

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their Masters by Research program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment).

## Professional recognition

Not applicable

## Research information

The Faculty of Health provides a range of higher degree by research programs at masters and doctorate level, including professional doctorates in the discipline of psychology.

The Faculty has affiliation with six of the University Strategic Research Centres, which work with national and international partners in health communities, business, industry and government to bring about evidence-based practical, equitable health outcomes globally, nationally and in local communities. The Centres are engaged in research programs related to patient care, patient safety, health services, mental health, psychiatric disorders, molecular medicine, immunology, neurosciences, public health research and evaluation, population health, human nutrition, physical activity and health, and social determinants of health and wellbeing.

To review details of the Strategic Research Centres and the research we are undertaking visit Deakin's website.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Course learning outcomes	Deakin graduate learning outcomes
Demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating substantial contribution to knowledge through the use of appropriate research principles and methods.	<p>Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.</p> <p>Digital literacy: using technologies to find, use and disseminate information.</p> <p>Self-management: working and learning independently, and taking responsibility for personal actions.</p>
<p>Apply critical analysis and reflection to ethically research, synthesize and evaluate complex information, problems, concepts, interpretations and theories to demonstrate cognitive and technical skills in a body of knowledge or practice.</p> <p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p>	<p>Critical thinking: evaluating information using critical and analytical thinking and judgment.</p> <p>Problem solving: creating solutions to authentic (real world and ill-defined) problems.</p> <p>Teamwork: working and learning with others from different disciplines and backgrounds.</p>
Demonstrate autonomy, expert judgement, adaptability, initiative, resilience and responsibility as a practitioner or learner.	<p>Communication: using oral, written and interpersonal communication to inform, motivate and effect change.</p> <p>Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.</p>

## Course rules

A Masters by Research degree is awarded for a substantial, original contribution to knowledge achieved in up to two years of full-time study (or up to four years of part-time study).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Work experience

Career Pathway Placements (internships) with industry partners, are offered as an elective, to all domestic and international HDR students. The timing of a proposed placement should be discussed with the supervisory team, and approved by the School HDR Coordinator.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Applied Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Applied Science
<i>Campus</i>	Offered at Burwood (Melbourne), Waurn Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	075374E
<i>Deakin course code</i>	H860
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Undertake research into the molecular basis of health and disease.

Research spans basic gene discovery and molecular analysis, through functional genomics and pre-clinical development to the testing of new therapeutics, underpinned by powerful and relevant experimental platforms.

Key areas of research include immunity, infectious diseases, developmental biology, exercise physiology and metabolism, musculoskeletal biology, haematology, cancer, metabolic disease, structural biology and nanomedicine.

A Masters by Research degree is awarded for a substantial, original contribution to knowledge achieved in up to two years of full-time study (or two to four years of part-time candidature).

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation. This degree is perfect if you are looking to kickstart your career in research and academia.

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their Masters by Research program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment.)

# Doctor of Philosophy

<i>Year</i>	2019 course information
<i>Award granted</i>	Doctor of Philosophy
<i>Campus</i>	Offered at Burwood (Melbourne), Waurn Ponds (Geelong), Waterfront (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	4 years full-time or part-time equivalent
<i>CRICOS course code</i>	090790G
<i>Deakin course code</i>	H902
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

Candidates for H902 PhD will undertake research in a public health related topic under the supervision of academic staff members at Deakin University and University of Copenhagen. They will spend at least six months at each institution to allow them to be provided with exposure to international health systems and research.

Research areas supported include Public Health and Health Promotion, Health Economics and Program Evaluation, Public Health Nutrition, Health Service Management, Medicine and Allied Health.

A Doctor of Philosophy is awarded for a substantial, original contribution to knowledge achieved in up to four years of full-time study (or four to eight years of part-time candidature).

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation. This degree is perfect if you are looking to kick start your career in research and academia.

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their PhD program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment.)

<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

Make a significant contribution to an important public health field by undertaking PhD research.

The Doctor of Philosophy (PhD) is a supervised research program where you will make a substantial, original contribution to knowledge in your chosen field.

Public health research in nutrition includes: measurement and evaluation of food sources; nutritional assessment; exercise and behaviour; sports nutrition; physiology and metabolism; diet and disease with particular interest in cancer, cardiovascular disease, obesity, diabetes and osteoporosis.

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation.

# Doctor of Medicine

Year	2019 course information
Award granted	Doctor of Medicine
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Offered at Waurn Ponds (Geelong)
Cloud Campus	No
Duration	4 years full-time. The course is only available to students on a full-time basis. This is a four-year graduate entry program for students who have already completed an undergraduate degree.
CRICOS course code	096842G
Deakin course code	H911
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9

## Course overview

Set yourself up for a range of careers, from general practice and geriatric medicine through to pathology, paediatrics and surgery. Our Doctor of Medicine has an emphasis on rural and regional medicine and aims to address the critical shortage of doctors in regional areas – making graduates highly employable.

Do you want to experience the hands-on training and engaging theory needed to enter the medical profession with confidence?

Problem-based learning is a key theme of medicine at Deakin, meaning that while you are at university, you will learn to solve the kinds of problems that you will encounter when you are working in medicine.

You will also get the chance to study at our \$53 million purpose-built facilities at Geelong Waurn Ponds Campus for the first two years of your course. This allows you to learn and engage through problem-based seminars and practical classes. Your clinical experience will take place in laboratories, hospitals, and other health services in the Geelong region.

Our course also includes placements in a range of medical environments, from hospitals and general practices to community healthcare settings in the Geelong region. For the third and fourth years of the course, you will have the opportunity to preference one of four clinical schools in Geelong, Ballarat, Warrnambool and Box Hill, with the additional option in third year of the Rural Community Clinical School.

The course concludes in year four with two five-week rotations – an elective that can be taken in Australia or overseas and a pre-internship hospital rotation in which the student experiences the day to day life of an intern.

During the clinical placement component of the Doctor of Medicine, you will complete at least four weeks of a dedicated rural attachment, which meets your Commonwealth Department of Health requirements.

Up to 5% of domestic places in Deakin's Doctor of Medicine course are held for Indigenous Australian applicants applying through the Indigenous Entry Stream.

## Indicative student workload

As a student in the Faculty of Health you can expect to participate in a range of teaching activities each week. This could include classes, seminars, workshops, online interaction and clinical placements. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

All four years of the Doctor of Medicine require a full-time commitment, with a substantive load of required learning activities and study time.

## Professional recognition

The Doctor of Medicine is accredited with the Australian Medical Council (AMC). Graduates who satisfactorily complete pre-registration training will qualify as Registered Medical Practitioners in Australia and New Zealand.

## Career opportunities

Deakin's medicine graduates perform extremely well in terms of employment outcomes, with 100% of the 2016 and 2017 graduates finding employment.

In order to qualify as registered medical practitioners with the Australian Medical Council (AMC), these graduates are currently undertaking accredited internships at a number of Victorian and interstate hospitals.

Following successful completion of their intern year, our graduates will be able to apply for entry to speciality training programs for a diverse range of medical careers.

## Employment after graduation

International students who graduate from Australian Medical Schools are subject to an Australian Government-imposed 10-year moratorium

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

All students are required to undertake a Police and Working with Children Check at the commencement of their course. Students who fail to do so prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students are also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

If you are an International student you need to be aware the Australian Government caps Commonwealth Supported Places (CSP) for this course. If you are enrolled in this course and transfer from a student visa or other temporary visa to a permanent visa, you are unlikely to receive a CSP place. You would however be eligible for a full fee-paying domestic place. For more information about fees, please visit Current students fees website.

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Diagnose and manage clinical conditions, and carry out practical procedures to provide safe patient care.
Communication	Select appropriate communication modes to share complex knowledge and concepts with patients, carers, colleagues and communities
Digital literacy	Use digital technology responsibly to enhance medical practice.
Critical thinking	Critically appraise and apply knowledge to problem solve and make sound professional and patient care decisions.
Problem solving	Formulate healthcare solutions using research skills to evaluate, interpret and implement evidence based practice.
Self-management	Demonstrate professional obligation and responsibility to patients, the profession and self as work ready doctors; and show a life-long commitment to reflective learning through practice, research and teaching.
Teamwork	Demonstrate collaborative practice within a health care team to provide safe, high quality medical care.
Global citizenship	Prioritise prevention and implement holistic approaches to enhance the health and well-being of individuals, communities and populations; advocate for public health and demonstrate a commitment to advancing the health and well-being of rural, remote, Indigenous and marginalised individuals and communities.

## Course rules

The first two years of the MD are based at Waurn Ponds (Geelong), where students learn in simulated clinical environments and dedicated medical sciences teaching spaces, along with small-group learning sessions. Students will also be exposed to clinical experiences from early in the course, through placements with healthcare providers.

During years three and four students will undergo intensive clinical training within health services attached to one of five clinical schools, in Geelong, Warrnambool, Ballarat or Melbourne, or with the RCCS. Students will conduct their learning and assessment in the clinical environment, guided by experienced staff associated with the clinical schools.

The course concludes in year four with two five week rotations – an elective that can be taken in Australia or overseas and a pre-internship hospital rotation in which the student experiences the day to day life of an intern.

To complete the Doctor of Medicine students must attain 32 credit points. All units are core units (these are compulsory). Students must pass all units including all components of units in the course.

The course is only available on a full-time basis.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

# Doctor of Philosophy

<i>Year</i>	2019 course information
<i>Award granted</i>	Doctor of Philosophy
<i>Campus</i>	Offered at Burwood (Melbourne), Waterfront (Geelong), Warrnambool
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	006256E
<i>Deakin course code</i>	H920
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

Make a significant contribution to your chosen field by undertaking PhD research that is grounded in clinical practice.

This degree is run by the School of Nursing and Midwifery, which through its clinical partnership program and community links, has an established research program that embraces the theoretical and philosophical underpinnings of nursing.

A major research focus of the School examines symptoms and risk management associated with a wide range of chronic illnesses. Other areas of research include the exploration of symptoms and risk management associated with management of patients in acute and critical care contexts.

The research area of health services evaluation involves a critical evaluation of current health services models and the development of alternative models of health services delivery.

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their PhD program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment.)

## Professional recognition

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Work experience

Career Pathway Placements (internships) with industry partners, are offered as an elective, to all domestic and international HDR students. The timing of a proposed placement should be discussed with the supervisory team, and approved by the School HDR Coordinator.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Doctor of Philosophy

<i>Year</i>	2019 course information
<i>Award granted</i>	Doctor of Philosophy
<i>Campus</i>	Offered at Burwood (Melbourne), Waurn Ponds (Geelong), Waterfront (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	018832A
<i>Deakin course code</i>	H930
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

Make a significant contribution to health promotion, public health, and health services by undertaking PhD research.

There are opportunities to commence PhD research in areas such as health promotion; health economics and program evaluation, health impact assessment; public health policy; rural health; health and the environment; social determinants of health; disability; social work; occupational therapy and community health.

You can also commence research in: health promotion; health education and advancement; public health policy; household ecology encompassing sustainability, decision making and community involvement; and social determinants of health with a focus on gender, ethnicity and inequality.

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation.

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their PhD program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment.)

## Professional recognition

Not applicable

## Research information

The Faculty of Health provides a range of higher degree by research programs at masters and doctorate level, including professional doctorates in the discipline of psychology.

The Faculty has affiliation with six of the University Strategic Research Centres, which work with national and international partners in health communities, business, industry and government to bring about evidence-based practical, equitable health outcomes globally, nationally and in local communities. The Centres are engaged in research programs related to patient care, patient safety, health services, mental health, psychiatric disorders, molecular medicine, immunology, neurosciences, public health research and evaluation, population health, human nutrition, physical activity and health, and social determinants of health and wellbeing.

To review details of the Strategic Research Centres and the research we are undertaking visit Deakin's website.

## Course learning outcomes

Course learning outcomes	Deakin graduate learning outcomes
Demonstrate systematic and critical understanding in one or more specialist fields or discipline areas by planning and generating a substantial and original contribution that advances scholarship or professional practice.	<p>Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.</p> <p>Digital literacy: using technologies to find, use and disseminate information.</p> <p>Self-management: working and learning independently, and taking responsibility for personal actions.</p>
<p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p> <p>Synthesise, apply and analyse existing and new knowledge in one or more discipline areas to develop new concepts or interpretations through engagement in ethical research, critical reflection, continuous evaluation and demonstration of research skills.</p>	<p>Critical thinking: evaluating information using critical and analytical thinking and judgment.</p> <p>Problem solving: creating solutions to authentic (real world and ill-defined) problems.</p> <p>Teamwork: working and learning with others from different disciplines and backgrounds.</p>
Demonstrate autonomy, authoritative judgement, adaptability, leadership, initiative, resilience and responsibility as an expert and leading practitioner or scholar.	<p>Communication: using oral, written and interpersonal communication to inform, motivate and effect change.</p> <p>Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.</p>

## Course rules

A Doctor of Philosophy is awarded for a substantial, original contribution to knowledge achieved in three years of full-time study (or six years of part-time study).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Work experience

Career Pathway Placements (internships) with industry partners, are offered as an elective, to all domestic and international HDR students. The timing of a proposed placement should be discussed with the supervisory team, and approved by the School HDR Coordinator.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

<i>Deakin course code</i>	H940
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

Make a significant contribution to exercise science/sport by undertaking PhD research.

You can commence PhD research in areas such as exercise science/sport and physical activity and nutrition. This includes epidemiological, behavioural and social science analyses of activity in whole populations and special groups; studies of muscle and bone metabolism and physiology of muscle.

Other study areas include movement analysis and sport performance relating particularly to motor skill acquisition, perception and action, movement economy, and fitness in older adults.

Research in the discipline of nutrition also includes measurement and evaluation of food sources, sports nutrition, and diet and disease with particular interest in cardiovascular disease, obesity, diabetes and osteoporosis.

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation.

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their PhD program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment.)

# Doctor of Philosophy

<i>Year</i>	2019 course information
<i>Award granted</i>	Doctor of Philosophy
<i>Campus</i>	Offered at Burwood (Melbourne), Waterfront (Geelong), Warrnambool
<i>Cloud Campus</i>	Yes
<i>Duration</i>	4 years full-time or part-time equivalent
<i>CRICOS course code</i>	018831B
<i>Deakin course code</i>	H950
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

Make a significant contribution to one of many areas within health and psychology by undertaking PhD research.

You can commence research in the areas of clinical; health and forensic psychology; social and mental health; adolescent health; risk behaviours; body image and disordered eating; drugs and alcohol; eye-witness testimony; treatment of offenders; human sexuality; reproductive health; healthy ageing and depression among older people; cognitive neurosciences and neurodevelopmental disorders; quality of life; relationships; human factors such as auditory and visual perception; and organisational psychology in health care settings.

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation.

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their PhD program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment.)

## Professional recognition

This course is Australian Psychology Accreditation Council (APAC) accredited.

*Note: This will not lead to Registration as a psychologist or Area of Practice endorsement.*

*Note: This course is currently accredited as at the date of publishing.*

## Participation requirements

The minimum requirement is the completion of a research methods unit such as HPS907/HPS911, which may require assignments/exams, and the thesis. The unit is assessed as per all other units at Deakin University and the thesis is submitted to the University and it is assessed by three examiners.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a a National Police Record Check, a Working with Children Check at the comm or other check.

Refer the relevant unit guide.

## Pathways

Students may transfer from a Research Masters to PhD. Some students who do not have enough research in their degree or lower grades may commence with a Research Masters, and then at confirmation they may transfer to a PhD (subject to recommendation of the panel and high-quality work).

## Research information

The Faculty of Health provides a range of higher degree by research programs at masters and doctorate level, including professional doctorates in the discipline of psychology.

The Faculty has affiliation with six of the University Strategic Research Centres, which work with national and international partners in health communities, business, industry and government to bring about evidence-based practical, equitable health outcomes globally, nationally and in local communities. The Centres are engaged in research programs related to patient care, patient safety, health services, mental health, psychiatric disorders, molecular medicine, immunology, neurosciences, public health research and evaluation, population health, human nutrition, physical activity and health, and social determinants of health and wellbeing.

To review details of the Strategic Research Centres and the research we are undertaking visit Deakin's website.

## Course learning outcomes

Course learning outcomes	Deakin graduate learning outcomes
Demonstrate systematic and critical understanding in one or more specialist fields or discipline areas by planning and generating a substantial and original contribution that advances scholarship or professional practice.	<p>Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.</p> <p>Digital literacy: using technologies to find, use and disseminate information.</p> <p>Self-management: working and learning independently, and taking responsibility for personal actions.</p>
Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.	<p>Critical thinking: evaluating information using critical and analytical thinking and judgment.</p> <p>Problem solving: creating solutions to authentic (real world and ill-defined) problems.</p> <p>Teamwork: working and learning with others from different disciplines and backgrounds.</p>
Synthesise, apply and analyse existing and new knowledge in one or more discipline areas to develop new concepts or interpretations through engagement in ethical research, critical reflection, continuous evaluation and demonstration of research skills.	
Demonstrate autonomy, authoritative judgement, adaptability, leadership, initiative, resilience and responsibility as an expert and leading practitioner or scholar.	<p>Communication: using oral, written and interpersonal communication to inform, motivate and effect change.</p> <p>Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.</p>

## Course rules

A Doctor of Philosophy is awarded for a substantial, original contribution to knowledge achieved in three years of full-time study (or six years of part-time study).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

Students complete a pre-confirmation at five months, confirmation at nine months and second year progress presentation during their second year (third or fourth year for part-time students). Student are required to complete a research methods unit in the first year, preferably before their confirmation.

## Work experience

Students can complete a work placement in their final year but this is optional and also depends on availability.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

Students can complete additional training units via the PhD extra program.

## Research and research-related study

Students are required to complete one research methods units.

# Doctor of Psychology (Clinical)

<i>Year</i>	2019 course information
<i>Award granted</i>	Doctor of Psychology (Clinical)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	4 years full-time. However, students should note that delays in either completion of the research thesis or delays in accessing or completing placements may mean that the duration of the course may be extended.
<i>CRICOS course code</i>	022556D
<i>Deakin course code</i>	H951
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

Interrelated streams of theory, research and practice provide the skills needed to become a registered psychologist.

Our award winning teaching strategies and learning resources, include simulation and competency-based assessment approaches.

The course is based on the scientist/practitioner model that rests firmly on a foundation of established knowledge and current evidence-based research.

Doctor of Psychology (Clinical) covers clinical psychology across the lifespan and also includes a focus on the assessment and treatment of children, adolescents and families.

You will have opportunities to develop clinical skills in our unique clinics imbedded in public mental health and through placements in an array of community agencies.

You will undertake a program of independent supervised research that makes a significant and original contribution to the knowledge and practice of clinical psychology.

## Indicative student workload

The Doctor of Psychology (Clinical) program is a full-time course and as such, it requires a full-time commitment from students.

Nevertheless, it is recognised that many students will need to work to support themselves for the duration of their study. Students are advised that working over and above 8 hours per week is likely to impact their progress through the course.

The Doctor of Psychology (Clinical) program is a multi-campus program across Deakin Burwood and Deakin Waterfront. The face-to-face coursework component is predominantly held at the Burwood Campus in a purpose built clinical teaching facility. Some teaching will be held in Geelong including some full-day clinical teaching workshops while other aspects of the teaching and learning occurs in the online CloudDeakin environment. With few exceptions, students will attend both the Barwon Health Deakin Psychology Clinic and the Eastern Health Psychology Clinics as part of their Placement programs.

## Professional recognition

This course has been accredited by the Australian Psychology Accreditation Council (APAC) in accordance with the Accreditation Standards for Psychology Program (APAC, 2010). These standards are designed for accreditation of programs such as this for pathway to practice as a registered psychologist. As such, this course is approved by the Psychology Board of Australia (PsyBA) for the purposes of approving it under the National Law.

On completion of this course graduates may apply to the PsyBA for registration as a psychologist. To obtain endorsement in the Clinical area of specialisation graduates are required to complete one year of approved supervised practice and fulfil professional development requirements.

*Note: This course is accredited at the date of publishing. The eligibility of students for registration by the Psychology Board of Australia, and for membership of professional bodies such as the Australian Psychological Society (APS) and its Clinical College is subject to meeting the requirements of the regulatory body and the professional association. Deakin University makes no representation that students will meet those requirements.*

*Students should note that the Accreditation Standards for Psychology Programs have been reviewed and updated (Accreditation Standards for Psychology Programs (2017)) and these new standards will apply to incoming students from 1 January 2019.*

## Career opportunities

Clinical psychologists are specialists in the assessment, diagnosis and treatment of psychological and mental health conditions that range from mild to severe and complex. They are often involved in designing and implementing a diverse range of prevention and mental health promotion programs, and may work with infants, children, adolescents, adults and older adults. Graduates typically are employed in one of the many government and non-government agencies that employ clinical psychologists in either community or hospital settings. After some years of practice and clinical supervision, some clinical psychologists establish a private practice. In addition to professional practice, clinical psychologists may be involved in research, teaching and supervision, program development and evaluation, public policy and other activities that promote psychological health in individuals, families and groups.

## Participation requirements

Students are required to complete 4 compulsory clinical placements of 2–3 days per week for approximately 20 weeks. These placements include at least one placement in the Barwon region at our joint Clinical Training Clinic with Barwon Health.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

### Department of Human Services policy – Police Record Check and Working With Children Check

In accordance with Department of Human Services policy, all students are required to undertake a National Police Record Check prior to clinical placements in each calendar year of their course.

In accordance with the Department of Justice 2007, Working with Children Act 2005, amended 2017, all students are required to undertake a Working with Children Check at the commencement of their course. Students who fail to obtain a Police Record Check and a Working with Children Check prior to the commencement of clinical placement will not be able to undertake clinical placement and this will impede progress in the course.

Students may also be required to declare their immunisation status to satisfy the requirements of health organisations where they will be undertaking their clinical learning experience. A health organisation may refuse to accept a student for placement if the student's immunisation status is not satisfactory to the health organisation.

Under the regulations of the Health Practitioner Regulation National Law Act 2009, Master of Psychology students are required to be provisionally registered from the commencement of enrolment and for the duration of enrolment in their degree. This is a mandatory requirement. Students should apply online for provisional registration with the Psychology Board of Australia as soon as they have been accepted into the degree. Alternatively, a paper form is available on the Board's website (see Application for provisional registration – APRO-76

## Pathways

As a HDR program, it is not typical for students to seek for transfer to an alternative course. In the unusual circumstances where students are not meeting the competencies for the coursework and practice aspects of the program, they may seek to or be encouraged to transfer to a research only program (including to a PhD). In these cases they must can apply in the usual manner for entry into the PhD course, competing with newly applying HDR students. They must also successfully undertake a Doctoral level thesis confirmation.

## Thesis

The Doctor of Psychology (Clinical) is a research degree, and requires students to complete a thesis equivalent in conceptual complexity to the traditional research PhD, but of somewhat lesser size and scope. The thesis consists of two components: 1) a Major Investigative Project, involving a report on an empirical study or series of studies on a topic of relevance to clinical psychology and that can be undertaken by publication or in traditional form; and 2) a separate Portfolio of Case Reports that are written up in relation to a particular theme and in the context of a critical appraisal of relevant literature. Each student will work with a supervisory team to complete their thesis.

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Display an advanced and integrated knowledge of psychopathology and the theoretical principles underlying the practice of clinical psychology, with respect to evidence-based practice of assessment, diagnosis, treatment and prevention across the lifespan and with a focus on children and families.
Communication	Compose clearly written case reports; demonstrate effective verbal and interpersonal communication skills using appropriate language to communicate with specialists and non-specialists such as other health professionals, clients and carers within a range of professional settings.
Digital literacy	Expert use of appropriate technologies to collect relevant discipline-specific information; assemble, evaluate, justify and integrate this information to formulate appropriate hypotheses, assessment and treatment approaches and disseminate this information to clients and health professionals.
Critical thinking	Competence in the design and conduct of research; and critically evaluate, synthesise and integrate complex scientific evidence, transform this information into case formulations, assessment, interventions and policy that demonstrate evidence-based professional practice in the field of clinical psychology.

Graduate learning outcomes	Course learning outcomes
Problem solving	Expert skills to critically analyse theoretical frameworks and adapt knowledge and skills from psychological, biological and medical fields to design multiple, creative assessment and treatment approaches tailored to meet the needs of diverse client presentations.
Self-management	Demonstrate ethical and professional practice, showing personal autonomy, accountability, good judgment and reflective practice in all areas of psychological and professional work and scholarship.
Teamwork	Develop, maintain and manage professional, ethical and collaborative relationships with multidisciplinary team members and stakeholders to work effectively together in the best interest of the client and the profession.
Global citizenship	Demonstrate, report and apply ethical, legal and professional principles to work productively as a clinical psychologist within diverse social, cultural and environmental contexts by collaborating and communicating in a self-reflective and culturally sensitive manner.

## Course rules

To complete the Doctor of Psychology (Clinical) students must attain 24 credit points covering three strands: theory, research and practice.

This is a full time course, designed for completion within 3.5 years. It is comprised of three inter-related strands of theory, research, and practice.

The coursework units are in the first and second trimesters, with placement and thesis components undertaken throughout the entire year (Trimesters 1, 2 and 3). In the later part of the third year and into the fourth year, students will focus on completion of their thesis. Some students will be ready to submit their thesis early.

The course formally commences in early February, when students are required to attend an orientation session and commence work on their thesis.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

This course structure is for students commencing in 2017 onwards. Students who commenced their course prior to 2017 should refer to previous handbook entries.

### Level 1

#### Trimester 1

- HPS914 Studies in Psychopathology
- HPS977 Psychological Intervention 1
- HPS976 Issues in Professional Psychology
- HPS979 Psychological Assessment

#### Trimester 2

- HPS910 Clinical Placement and Case Analysis 1
- HPS907 Advanced and Applied Research Methods
- HPS908 Psychological Intervention 2
- HPS924 Research Thesis A

## Level 2

### Trimester 1

HPS905	Advanced Clinical Assessment
HPS910	Clinical Placement and Case Analysis 1 (continued)
HPS925	Research Thesis B
HPS978	Biological and Neuropsychological Perspectives on Disorder

### Trimester 2

HPS912	Clinical Placement and Case Analysis 3
HPS915	Psychological Intervention 3
HPS926	Research Thesis C

## Level 3

### Trimester 1

HPS916	Psychological Intervention 4
HPS917	Clinical Placement and Case Analysis 4
HPS927	Research Thesis D

### Trimester 2

HPS918	Clinical Placement and Case Analysis 5
HPS928	Research Thesis E

*Note: Consistent with a developmental approach, there is a prescribed sequence for coursework and placement units such that successful completion of earlier units is required to enrol in later units. Specific information regarding pre-requisites are described in the individual Unit Guides.*

## Work experience

### Placement program

The clinical placements are designed to equip students with a range of professional skills and an awareness of professional issues. Students will benefit from Deakin's placement partnerships with Barwon Health and Eastern Health with these placements enabling them to gain experience of adult, adolescent and child problems.

The placement program overall provides students with diverse clinical experience across community and institutional care; and medical and non-medical agencies. The placement program will be determined jointly by the student, the placement coordinators, and the course leadership team. Contracts will be drawn up which will clearly specify the skills to be taught and the responsibilities of the student and placement supervisor. With few exceptions, Placement supervisors are registered psychologists with a clinical endorsement as a specialised area of practice, as well as being Registered supervisors. Each placement requires the full complement of days to be completed. Failure of any one placement may result in exclusion from the course.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Third party arrangements

### Agreement

#### Barwon Health

- Nursing and Midwifery and Allied Health Student Placement Agreement between the Faculty of Health, Deakin University and Barwon Health.
- Valid for 1 January 2015 to 31 December 2019
- Schedule include Psychology students
- Agreement signed by Executive Dean, Prof. Brendan Crotty

#### Eastern Health

- Partnership Agreement – Faculty of Health, Deakin University and Eastern Health.
- Valid from 1 January 2017 to 31 December 2017
- Agreement signed by Head of School and Chief Executive Eastern Health.

### Nature of third party arrangements

#### Barwon Health

The agreement provides for a 50% contribution to two full time joint appointments (one of which fulfils the role of Clinic Director) as well as administration support to the Barwon Health Deakin Psychology Clinic. At the time of the completion of this documentation, the purpose built clinical and clinical training facility was located at 121 Myers Street, Geelong. Joint appointees employed under this agreement provide oversight of the clinical training facility, as well as clinical supervision of student placements within the Clinic. In addition, the incumbents teach into the program and contribute to other academic work as agreed.

#### Eastern Health

The agreement provides for a 50% contribution to two full time joint appointments (one of which fulfils the role of Clinic Director) as well as administration support. At the time of completion of this documentation, the Eastern Health Psychology Clinic is co-located with the Child and Youth Mental Health Service (CYMHS) in Station Street, Box Hill. Joint appointees employed under this agreement provide oversight of the clinical training facility, as well as clinical supervision of student placements within the Clinic. In addition, the incumbents teach into the program and contribute to other academic work as agreed.

### Quality assurance arrangements

Course design, revision and quality improvement is focused on design principals provided for in the draft Design Principles for Units and Courses (Deakin). In addition, quality assurance is supported by external accreditation by the APAC which occurs on a 5 year cycle. External Industry feedback is provided for by the contribution of a well-engaged Advisory Board and is incorporated to annual and major course review processes. This is supplemented by robust student feedback with the nomination of Student Representation at each Course level who feed into mid and post Semester Clinical Team meetings and annual Course reviews.

### Other learning experiences

Throughout the program students are invited and encouraged to participate in a range of other Faculty led or independently provided professional development activities as well as training in simulation education.

### Research and research-related study

The Thesis or Dissertation represents the third component of an accredited DPsych (Professional Doctorate).

This is in line with the purpose of the Doctoral Degree (Professional) to qualify individuals who apply a substantial body of knowledge to research, investigate and develop new knowledge, in one or more fields of investigation, scholarship or professional practice.

According to AQF, research is the defining characteristic of all Doctoral Degree qualifications such as the DPsych (Clinical) and will be typically for at least two years of the qualification. The program of structured learning typically will include advanced coursework designed to enhance the student's capacity to make a significant contribution to original knowledge in the discipline (or cross-disciplinary field) and/or research-integrated practice developed in collaboration with a relevant professional, statutory or regulatory body. The advanced coursework and research-integrated practice will support the research outcome.

APAC further specifies that the thesis or dissertation must be of a high quality and reflect the fact that this is a doctoral level degree. These degrees are expected to consist of a research component that requires at least the equivalent of one year full-time work spent on the thesis component of the course.

In the current program, the structure is such that the other two components (Coursework and Placement) are completed in the second half of the third year with the final 12 months focussed full-time on the research thesis. Overall, 17 of 32 Credit Point Units of the Course Structure pertain to the Research Thesis, representing a little over two years equivalent of the program.

In the current program, the thesis consists of two components: 1) a Major Investigative Project, involving a report on an empirical study or series of studies on a topic of relevance to clinical psychology and that can be undertaken by publication or in traditional form; and 2) a separate Portfolio of Case Reports that are written up in relation to a particular theme and in the context of a critical appraisal of relevant literature.

# Doctor of Psychology (Forensic)

<i>Award granted</i>	Doctor of Psychology (Forensic)
<i>Duration</i>	4 years full-time
<i>CRICOS course code</i>	040945G
<i>Deakin course code</i>	H952

*Offered to continuing students only.*

## Course overview

The Doctor of Psychology (Forensic) aims to provide those who have completed a recognised four year psychology sequence/degree with the opportunity to obtain professional training in forensic psychology and develop the academic, practical and research skills required to register and practise as a forensic psychologist.

Throughout the course you will undertake a range of core units which are divided across coursework, placement and thesis requirements. Coursework includes units on applied methodology, interview and intervention skills, assessment and treatment of forensic clients, psychology and the law, psychopathology, and children and the legal system. You will have at least 200 days practical experience with forensic clinicians in four or more agencies and undertake supervised client work as appropriate. You will also have the opportunity to design, conduct and present a major thesis that reports the results of original research. This thesis is externally examined and is expected to reflect the program's status as a research degree. In addition to the coursework, placement and research components of the program, you will complete a professional portfolio, which is examined externally and based on cases from their placement work.

Throughout the course you will develop:

- specialist knowledge of forensic psychology as well as the general knowledge and skills required by psychological practitioners
- specialist knowledge of psychology and the law and assessment and treatment of offenders and victims
- knowledge and competence in the theory and practice of psychological assessment
- knowledge and awareness of the ethical principles of psychological practice, with particular relation to the practice of forensic psychology
- experience of the practice of forensic psychology within a range of forensic settings
- advanced levels of competence in the design and conduct of research in the area of child or family forensic psychology
- an appreciation of the multidisciplinary practice of psychology through cooperation with professionals from other related disciplines during practicum placements.

You will also gain advanced knowledge and practical experience in the assessment and treatment of children and their families within a forensic setting.

## Professional recognition

This course is accredited by the Australian Psychology Accreditation Council (APAC) and meets the requirements for graduates to register as generalist psychologists with the Psychology Board of Australia, and for membership of the Australian Psychological Society (APS).

Graduates will be eligible to apply for membership of the College of Forensic Psychologists and endorsement as a Forensic Psychologist following one year of work experience supervised by a forensic psychologist, together with completion of stipulated professional development requirements.

*Note: This course is currently accredited as at the date of publishing. The eligibility of students for membership of the accrediting body is subject to meeting the requirements of the APS and College of Forensic Psychologists. Deakin University makes no representation that students will meet those requirements.*

## Placement program

Your placement program will be worked out jointly by you, the placement coordinator and the practitioners supervising the placements. Forensic placements are tailored to your interests, skills and career aspirations and are designed to provide you with a range of professional skills, and to develop your awareness of ethical and professional issues. It is desirable that you gain experience with a range of client groups in a variety of organisational and correctional settings. Contracts will be drawn up that will clearly specify the skills to be mastered, your responsibilities and the responsibilities of the placement supervisor. Placement supervisors are registered and endorsed psychologists, eligible for membership of the College of Forensic Psychologists. Each placement requires completion of the full complement of days and failure of any one placement may result in exclusion from the course.

## Course rules

The doctorate course consists of 24 credit points of work covering three interrelated strands: theory, research and practice.

## Course structure

### Level 1

#### Trimester 1

HPS914	Studies in Psychopathology
HPS977	Psychological Intervention 1
HPS978	Biological and Neuropsychological Perspectives on Disorder
HPS979	Psychological Assessment

#### Trimester 2

HPS924	Research Thesis A
HPS934	Psychology and the Law – last offered 2015
HPS948	Forensic Placement 1 and Case Analysis Seminar 1 – last offered 2015
HPS976	Issues in Professional Psychology

### Level 2

#### Trimester 1

HPS907	Advanced and Applied Research Methods
HPS932	Forensic Placement 2 – last offered 2015
HPS933	Assessment and Treatment of Forensic Clients – last offered 2015
HPS925	Research Thesis B

#### Trimester 2

HPS926	Research Thesis C
HPS935	Forensic Placement 3 – last offered 2015
HPS936	Psychosocial Issues in Forensic Psychology and Case Analysis Seminar 2 – last offered 2015

### Level 3

#### Trimester 1

HPS927	Research Thesis D
HPS943	Unit description is currently unavailable
HPS944	Children and the Law – last offered 2016

#### Trimester 2

HPS928	Research Thesis E
HPS945	Child and Family Forensic Placement 2 and Case Conference Seminar B

*Note: All coursework units have a hurdle requirement of 80% attendance. A pass grade in a unit requires satisfactory completion of each component assessed.*

# Doctor of Philosophy

<i>Year</i>	2019 course information
<i>Award granted</i>	Doctor of Philosophy
<i>Campus</i>	Offered at Burwood (Melbourne), Waurn Ponds (Geelong), Warrnambool
<i>Cloud Campus</i>	Yes
<i>Duration</i>	4 years full-time or part-time equivalent
<i>Deakin course code</i>	H960
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

Undertake research into the molecular basis of health and disease under the supervision of an academic staff member in the School of Medicine.

Research spans basic gene discovery and molecular analysis, through functional genomics and pre-clinical development to the testing of new therapeutics, underpinned by powerful and relevant experimental platforms.

Key areas of research strength are: immunity, infectious diseases, developmental biology, molecular physiology, musculoskeletal biology, psychiatric disorders, haematology, cancer, metabolic disease, structural biology and nanomedicine.

PhD research is also available with the School of Medicine in the areas of rural and regional general practice; health and wellbeing, health service evaluation, public health and chronic disease management.

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation.

## Indicative student workload

A fulltime student is expected to commit 36 hours a week to their PhD program. A student is entitled to 20 working days annual leave from candidature on approval by their Principal Supervisor. (Part-time is half the commitment.)

## Professional recognition

Not applicable

## Career opportunities

Clinical epidemiology, public health, medical ethics, medical professionalism, health service management, quality assurance, risk prevention, medical education.

## Research information

The Faculty of Health provides a range of higher degree by research programs at masters and doctorate level, including professional doctorates in the discipline of psychology.

The Faculty has affiliation with six of the University Strategic Research Centres, which work with national and international partners in health communities, business, industry and government to bring about evidence-based practical, equitable health outcomes globally, nationally and in local communities. The Centres are engaged in research programs related to patient care, patient safety, health services, mental health, psychiatric disorders, molecular medicine, immunology, neurosciences, public health research and evaluation, population health, human nutrition, physical activity and health, and social determinants of health and wellbeing.

To review details of the Strategic Research Centres and the research we are undertaking visit Deakin's website.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Course learning outcomes	Deakin graduate learning outcomes
Demonstrate systematic and critical understanding in one or more specialist fields or discipline areas by planning and generating a substantial and original contribution that advances scholarship or professional practice.	<p>Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.</p> <p>Digital literacy: using technologies to find, use and disseminate information.</p> <p>Self-management: working and learning independently, and taking responsibility for personal actions.</p>
<p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p> <p>Synthesise, apply and analyse existing and new knowledge in one or more discipline areas to develop new concepts or interpretations through engagement in ethical research, critical reflection, continuous evaluation and demonstration of research skills.</p>	<p>Critical thinking: evaluating information using critical and analytical thinking and judgment.</p> <p>Problem solving: creating solutions to authentic (real world and ill-defined) problems.</p> <p>Teamwork: working and learning with others from different disciplines and backgrounds.</p>
Demonstrate autonomy, authoritative judgement, adaptability, leadership, initiative, resilience and responsibility as an expert and leading practitioner or scholar.	<p>Communication: using oral, written and interpersonal communication to inform, motivate and effect change.</p> <p>Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.</p>

## Course rules

A Doctor of Philosophy is awarded for a substantial, original contribution to knowledge achieved in three years of full-time study (or six years of part-time study).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Work experience

Career Pathway Placements (internships) with industry partners, are offered as an elective, to all domestic and international HDR students. The timing of a proposed placement should be discussed with the supervisory team, and approved by the School HDR Coordinator.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Masters Qualifying Program

<i>Year</i>	2019 course information
<i>Award granted</i>	This is a non-award course.
<i>Campus</i>	Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>CRICOS course code</i>	091382E
<i>Deakin course code</i>	M068
<i>Approval status</i>	This course is approved by the University under the Higher Education Courses Policy.
<i>Australian Qualifications Framework (AQF) recognition</i>	Not applicable.

*Offered to continuing students.*

## Course overview

The Deakin University Masters Qualifying Program (MQP) is a non-award program designed to provide a quality pathway to Deakin University's postgraduate programs in Business and Law.

Combining English language training and academic studies, the MQP is designed for students whose academic qualifications and/or English proficiency levels are marginally below the entry requirements for postgraduate programs at Deakin University.

The emphasis is on developing the skills necessary for success at postgraduate level. Students who complete the particular pathways within the MQP will meet the academic and English language requirements for entry into specified coursework postgraduate programs at Deakin University.

The MQP is taught by the Deakin College and Deakin University's English Language Institute (DUELI). Both institutions are co-located in a purpose-built building on Deakin University's Burwood (Melbourne) campus with state-of-the-art classroom facilities.

## Career opportunities

The MQP program is a Masters qualifying program with all successful students articulating into a Faculty of Business and Law Master or Graduate Diploma program. This will then enable the student to complete a professional degree leading on to employment in a related business area.

## Participation requirements

This course does not include any compulsory placements or work-based training.

## Mandatory student checks

N/A

## Fees and charges

Tuition fees for the Masters Qualifying Program are charged on a per course basis. Rates will be set annually and enrolled students will be invoiced at the prevailing rate. Invoices will be issued each trimester.

## Course learning outcomes

Deakin's graduate learning outcomes describe the knowledge and capabilities graduates can demonstrate at the completion of their course. These outcomes mean that regardless of the Deakin course you undertake, you can rest assured your degree will teach you the skills and professional attributes that employers value. They'll set you up to learn and work effectively in the future.

Graduate learning outcome	Course learning outcome
Discipline specific knowledge and capabilities	Demonstrate a broad range of theoretical and technical knowledge of commerce and its applications.

## Course rules

To complete the Masters Qualifying Program (MQP), students must complete:

- two discipline-based units (with a minimum weighted average mark of 60%); and
- two skill-based units (with an achieved Pass grade).

## Course structure

Students complete 4 credit points of study:

- Academic and Intercultural Communication for Postgraduate Study<sup>^</sup>
- Academic Writing and Research Skills Development for Postgraduate Study<sup>^</sup>

Plus 2 credit points of units from:

MAAP103	Accounting for Decision Making*
MAEP101	Economic Principles*
MAFP101	Fundamentals of Finance*
MISP171	Business Analytics*
MMMP132	Management*

<sup>^</sup> Units delivered by DUELI located at the Burwood Melbourne Campus.

\* Units delivered by Deakin College located at the Burwood Melbourne Campus

# Masters Qualifying Program Extended

<i>Year</i>	2019 course information
<i>Award granted</i>	This is a non-award course
<i>Cloud Campus</i>	No
<i>Duration</i>	0.4 year full-time or part-time equivalent
<i>CRICOS course code</i>	091383D
<i>Deakin course code</i>	M068E
<i>Approval status</i>	This course is approved by the University under the Higher Education Courses Policy.
<i>Australian Qualifications Framework (AQF) recognition</i>	Not Applicable.

*There are currently no intakes for this course. Offered to continuing students only.*

## Course overview

Deakin University's Masters Qualifying Program Extended (MQPE) operates in conjunction with the existing Masters Qualifying Program (MQP) course. The MQPE is a non-award program designed to supplement the MQP and provide a pathway to Deakin University's postgraduate courses in Business and Law.

Combining English language training and academic studies, the MQPE is designed for students whose academic qualifications and/or English proficiency levels are marginally below the entry requirements for postgraduate programs at Deakin University.

The emphasis is on developing the skills necessary for success at postgraduate level. Students who complete the particular pathways within the MQPE will meet the academic and English language requirements for entry into specified coursework postgraduate programs at Deakin University.

The MQPE is taught by the Deakin College and Deakin University's English Language Institute (DUELI). Both institutions are co-located in a purpose-built building on Deakin University's Burwood (Melbourne) with state-of-the-art classroom facilities.

## Participation requirements

This course does not include any compulsory placements or work-based training.

## Mandatory student checks

N/A

## Fees and charges

Tuition fees for the Masters Qualifying Program Extended are charged on a per course basis. Rates will be set annually and enrolled students will be invoiced at the prevailing rate. Invoices will be issued each trimester.

*Students who commenced this course prior to Trimester 1 2016, please refer to the 2015 Handbook.*

\* Not all major sequences are available via Campus study at Warrnambool. Students undertaking units in major sequences that are not available in Campus mode may enrol in units offered in Cloud (online) mode.

## Course overview

Develop your passion and skills about how commerce can solve the problems of the future by studying Deakin's Bachelor of Commerce. With authentic, practical learning experiences including the ability to research and resolve real commercial and community issues, Deakin's Bachelor of Commerce is at the forefront of providing you with the skills and experience to navigate your professional future.

Want to study a degree that sets you up for a successful career in finance, accounting, management or marketing?

Deakin's Bachelor of Commerce builds a foundation of robust business and personal skills, and gives you the freedom to pursue your passions in a range of specialised areas of business.

Graduate with a sought-after skill set built around three pillars relating to the everyday, practical challenges of modern businesses:

- financial understanding
- market knowledge
- personal and professional skills.

Professional development opportunities start from day one. In your first year, you'll work with the same programs and tools industry professionals use while building core business skills you'll carry with you through your entire career. From second year you get to choose your area of specialisation. Tailor the course to your interests and career goals by honing your professional expertise in one of the following majors:

- accounting
- economics
- finance
- financial planning
- food and agribusiness
- human resource management
- management
- management information systems
- marketing.

This can be complemented with a minor to enhance your employability, including:

- accounting
- agribusiness
- business analytics
- economics
- event management
- finance
- global studies
- human resource management
- international trade
- marketing
- professional practice
- project management
- retail management
- social entrepreneurship
- taxation regulation
- wealth management.

Deakin Business School's highly developed work-integrated learning (WIL) program gives you the platform to gain valuable work experience that counts as credit towards your degree. Every commerce student at Deakin has access to WIL opportunities. This practical experience and the networking opportunities they provide can make all the difference when you graduate and are applying for jobs. Our curriculum is complemented by a range of experiential learning opportunities including:

- mentoring
- volunteering
- consulting
- internships.

These hands-on experiences allow you to engage with real businesses, like the Australian Bureau of Statistics, the Australian Taxation Office, KPMG, Price Waterhouse Cooper, Bupa and Cherry Energy. Work on industry projects, build long-lasting relationships and get a taste for your future career. Because employers value Deakin commerce students' practical skills and business mindset, it's not uncommon for graduates to find employment at the companies they connect with throughout the course.

You can also improve your global employability skills in teamwork and intercultural communication by gaining international experience across Asia, Europe or North America through:

- overseas internships
- study tours
- exchange programs.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Students who complete the accounting major sequence are eligible to apply for admission to the:

- CA Program of the Chartered Accountants Australia and New Zealand (CAANZ)
- Associate membership for the CPA Program, CPA Australia
- IPA Program of the Institute of Public Accountants (IPA) and
- Association of Chartered Certified Accountants (ACCA) – A limited number of exemptions may apply. Please refer to the Association of Chartered Certified Accountants (ACCA) for further information.

The Bachelor of Commerce (with a major in Financial Planning) is a course approved by the new financial planning standards body – the Financial Adviser Standards and Ethics Authority (FASEA). Graduates who complete the Financial Planning major sequence in the Bachelor of Commerce will satisfy the education standards prescribed by FASEA to be able to provide financial advice in Australia and be eligible for entry into the certification programs of the professional financial planning associations – the CERTIFIED FINANCIAL PLANNER® Certification Program offered by the Financial Planning Association of Australia (FPA) and the Fellow Chartered Financial Practitioner designation offered by the Association of Financial Advisers (AFA).

Students who complete the marketing major are eligible for a one year credit reduction, off the five years, needed to become a Certified Practising Marketer by the Australian Marketing Institute (AMI).

Students should consult with a course adviser to identify any additional requirements for membership for each professional body, and also consult with the professional body.

## Career opportunities

There are employment opportunities for Bachelor of Commerce graduates in virtually every area of business and government – in Australia and overseas. Potential careers include becoming a professional accountant, IT and systems professional, economist, financial planner, human resources manager, social and economic policy developer, international trade officer and marketing assistant/manager. As this is a very broad course there are further possibilities in other professions especially if taken with further study.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Pathways

Expand your career options and create pathways into further study.

## Unit selection

Students admitted to the Bachelor of Commerce (BCom) will be given advice on unit selection, however students must take responsibility for planning their own studies within the course structure and course rules.

## Part-time studies

Part-time study is available via Campus and Cloud (online) mode. Part-time study refers to academic workload, not mode of study.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply a broad and coherent theoretical and technical knowledge of commerce and its applications
Communication	Communicate commerce concepts and information effectively including in oral, written and visual forms in a cohesive and understandable manner to academic audiences, business professionals and laypersons.
Digital literacy	Use technologies to identify, locate, evaluate, synthesise and disseminate and communicate information in the field of commerce.
Critical thinking	Evaluate and critically analyse academic, professional and business information and values.
Problem solving	Identify solutions to a diverse range of authentic problems in commerce.
Self-management	Take personal responsibility for actions, self-reflect and critique own performance and identify and plan future professional development.
Teamwork	Interact and collaborate with others from a range of disciplines and backgrounds.
Global citizenship	Engage effectively in different environments and contexts reflecting social, sustainable, ethical, economic, and global perspectives in the field of commerce.

## Course rules

To complete the Bachelor of Commerce students must attain 24 credit points. The 24 credit points include 8 credit points of core units, 8 credit points of units from a major (you will be required to complete at least one major) and 8 credit points of elective units (you may choose to undertake another 8 unit major or up to two 4 unit minors). Most units (think of units as 'subjects') are equal to 1 credit point. Most students choose to study 4 units per trimester, and usually undertake 2 trimesters each year.

To complete the course you must include the following:

- at least 16 credit points from Business and Law undergraduate units
- 8 credit points of core Bachelor of Commerce units
- completion of MAI010 Academic Integrity (0-credit-point compulsory unit)
- at least one 8 credit point Bachelor of Commerce major
- Level 1 – no more than 10 credit points
- Level 3 – at least 6 credit points (at least 4 must be Business and Law undergraduate units)

## Major sequences

Refer to the details of each major sequence for availability.

All students in the Bachelor of Commerce are required to complete at least one major sequence chosen from the following:

- Accounting<sup>^</sup>
- Business Analytics\*
- Commercial Law\*
- Economics
- Finance
- Financial Planning<sup>^</sup>
- Food and Agribusiness (New from 2019)
- Human Resource Management
- International Trade\*
- Management
- Management Information Systems
- Marketing

<sup>^</sup> These majors are the recommended pathway to qualify for membership of professional organisations.

\* Offered to continuing students only

## Minor sequences

- Accounting
- Agribusiness
- Business Analytics
- Contemporary Accounting\*
- Economics
- Event Management
- Finance
- Global Studies
- Human Resource Management
- International Trade
- Marketing
- Project Management
- Professional Practice
- Retail Management<sup>~</sup>
- Social Entrepreneurship
- Taxation Regulation
- Wealth Management

\* Offered to continuing students only

<sup>~</sup> This minor is not available for completion in 2019

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MAA103	Accounting for Decision Making
MAE101	Economic Principles
MAF101	Fundamentals of Finance
MIS171	Business Analytics
MLC101	Law for Commerce
MMK101	Marketing Fundamentals
MMM132	Management
MWL101	Professional Insight

### Elective units

Students may choose up to eight credit points of electives. These may constitute a second commerce major, or a major available in another Faculty (provided any prerequisites can be met), up to two minor sequences (as above) or a combination of units (again pre-requisites allowing) chosen by the student.

These may include the following Work Integrated Learning (WIL) units offered by the Faculty which are specifically designed to enhance a student's experience of the workplace:

MWL201	Community Based Volunteering
MWL202	Team Projects
MWL203	Work Based Learning
MWL204	Global Business Experience
MWL301	Team Internship
MWL303	Business Internship
MWL311	Industry Based Learning (3mth)
MWL312	Industry Based Learning (6mth)

## Work experience

Elective units may provide the opportunity for Work Integrated Learning experiences. See Deakin's website for more information.

## Details of major sequences

### **Accounting<sup>^</sup> – unit set code – MJ-M30041**

*Burwood (Melbourne), Waterfront (Geelong), Warrnambool, Cloud (online)*

#### Overview

Accountants are information specialists. They provide information, which is the only means of summarising the activities and worth of an organisation in a manageable form, as the basis for all review, decision and action throughout virtually every layer of business and government.

#### Professional recognition

Graduates who complete the accounting major sequence will be eligible to apply for admission to the:

- CA Program of the Chartered Accountants Australia and New Zealand (CA ANZ)
- Associate membership for the CPA Program, CPA Australia
- IPA Program of the Institute of Public Accountants (IPA) and
- Association of Chartered Certified Accountants (ACCA) – A limited number of exemptions may apply. Please refer to the Association of Chartered Certified Accountants (ACCA) for further information.

## Career outcomes

You may find employment in accounting positions in the business community, industry, commerce, the service sector or private practice, or work in management consulting, the financial services sector or with government bodies.

## Units

MAA250	Ethics for Financial Professionals
MAA261	Financial Accounting
MAA262	Management Accounting
MAA303	Audit and Assurance
MAA363	Corporate Accounting
MAF203	Business Finance
MLC301	Principles of Income Tax Law
MAA310	Accounting and Society

*Note: Students should consult with their course adviser regarding the units required for professional recognition. The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

<sup>^</sup> M300 Bachelor of Commerce is the recommended pathway to qualify for membership of professional organisations.

### **Business Analytics – unit set code – MJ-M30036**

*Offered to continuing students only. Please see a student adviser for further advice.*

### **Commercial Law – unit set code – MJ-M30042**

*Offered to continuing students only. Please see a student adviser for further advice.*

### **Economics – unit set code – MJ-M30043**

*Burwood (Melbourne), Waterfront (Geelong)\*, Cloud (online)*

## Overview

Economics is an important element of any business career or the basis of a specialist career in economic research and policy. Economics is relevant to the study of a whole range of other disciplines: business; finance; international markets and trade; health; transport; democracy and voting patterns; the environment – including policies on global warming; as well as social equity and wellbeing.

## Career outcomes

An economics major sequence can provide the background for many versatile careers in industry and finance in roles such as an analyst, forecaster, researcher and manager. In government, you may work as a policy researcher and administrator, and in education.

## Units

MAE201	Competition and Industry
MAE203	The Global Economy
MAE214	Economic Strategy for Business <sup>^</sup>
MAE256	Analytical Methods in Economics and Finance
MAE312	National Economic Policy
MAE307	Techniques for Business and Economic Analysis

### **Finance – unit set code – MJ-M30045**

*Burwood (Melbourne), Waterfront (Geelong)\*, Warrnambool\*, Cloud (online)*

#### **Overview**

Finance is all about decision making. Do I buy or sell, invest or borrow? Finance specialists research and analyse the financial aspects of organisations and markets. They provide advice on investments and other areas of financial management. Studying finance will give you a broad understanding of the structure and operations of financial markets in Australia, plus the theory and techniques underlying financial decision-making.

#### **Career outcomes**

You may find employment opportunities in banking, brokering, credit analysis, funds management, insurance, international finance, risk management and securities analysis.

#### **Units**

MAA250	Ethics for Financial Professionals
MAF202	Money and Capital Markets
MAF203	Business Finance
MAE256	Analytical Methods in Economics and Finance
MAF307	Equities and Investment Analysis
MAF306	International Finance and Investment
MAF308	Derivative and Fixed Income Securities
MAF302	Corporate Finance

\* Please note: Waterfront (Geelong) and Warrnambool students will be required to undertake units in Cloud (online) mode.

### **Financial Planning – unit set code – MJ-M30044**

*Burwood (Melbourne), Waterfront (Geelong)\*, Warrnambool\*, Cloud (online)*

#### **Overview**

Choosing a major sequence in financial planning will provide you with the skills you need to attain your own personal financial goals and to develop the expertise to advise others in a professional capacity. Financial planners specialise in key financial areas, including retirement taxation, investment and estate planning. You will examine both the theoretical framework of financial planning, plus the practical application of the theories and strategies.

#### **Professional recognition**

The Bachelor of Commerce (with a major in Financial Planning) is a course approved by the new financial planning standards body – the Financial Adviser Standards and Ethics Authority (FASEA). Graduates who complete the Financial Planning major sequence in the Bachelor of Commerce will satisfy the education standards prescribed by FASEA to be able to provide financial advice in Australia and be eligible for entry into the certification programs of the professional financial planning associations – the CERTIFIED FINANCIAL PLANNER® Certification Program offered by the Financial Planning Association of Australia (FPA) and the Fellow Chartered Financial Practitioner designation offered by the Association of Financial Advisers (AFA). This major also allows advisers to meet any education requirements as set out in the Tax Agents Services Act (TASA) including completion of taxation law units approved by the Tax Practitioners Board (TPB).

#### **Career outcomes**

Financial planners are innovative and lateral in their thinking, they are up to date with the latest changes and they are committed to providing sound, independent and ethical advice.

## Units

MAA215	Client Behaviour and Decision Making
MAA255	Financial Planning
MAA317	Superannuation Planning ~

## **Food and Agribusiness – unit set code – MJ-M30047**

*Warrnambool\*, Cloud (online)*

### Overview

Agribusiness is a thriving discipline that refers to the collective business activities in food, fibre and agricultural supply chains. With the world's population expected to reach 9.8 billion in 2050, the food and agribusiness sector has never been more important. Undertaking the Food and Agribusiness major will provide you opportunity to be part of this growing sector, and your agribusiness skills will be highly sought after given the world-wide shift towards more complex, technology-intensive agricultural systems and management and challenges to produce healthier and more socially and environmentally-responsible food. This major will give you a solid understanding of the interlinkages between food and agricultural market structure, international and domestic policies, and innovations and sustainability issues. With its strong practical focus, the major will equip you to be work-ready through real-world economic, financial, marketing, accounting and management learning, as well as engagement with industry, governments and other stakeholders.

### Career outcomes

The Food and Agribusiness major sequence will provide you versatile skills and knowledge, hence employment opportunities beyond the farm management in roles such as agribusiness accountant, agribusiness banking officer, agricultural policy officer, agribusiness consultant, livestock officer, agribusiness analyst, international development officer, agripreneur and many more.

## Units

MAB242	Agribusiness Governance
MAB251	Agribusiness Resource Management

## Course overview

Deakin's Bachelor of Laws provides the robust training and recognised qualifications you need to start your career as a first-class legal practitioner.

All major areas of law are covered, such as contract, torts, property, legal practice and ethics, constitutional law, criminal law and procedure, and administrative law.

Deakin's Bachelor of Laws is accredited by the Victorian Legal Admissions Board, and satisfies the university component of the requirements to become an Australian Lawyer. If you wish to practise as a lawyer you will then complete an additional 12-month traineeship or a 6-month legal practice course.

Deakin Law School consistently ranks among the top in the country for teaching quality and student satisfaction. It was ranked in the top 100 in the world in the QS World University Rankings 2018. The School's teaching staff have a strong international profile, with qualifications from some of the top ranked universities around the world.

Throughout a Deakin law degree you will develop real-world legal skills including negotiation, mediation, preparing for court appearances, legal drafting, and statutory interpretation. A Deakin law degree develops transferable skills in critical thinking, evaluation, analysis, problem solving, communication, research and formal document drafting that will launch you on a variety of career paths. Graduates of a Deakin Law degree will have the ability to:

- Understand, synthesise and organise knowledge relevant to legal doctrine and legal practice.
- Communicate legal knowledge effectively to legal and non-legal audiences
- Research, locate and disseminate legal information using digital technologies
- Think critically and exercise judgment and intellectual independence to evaluate, consolidate and synthesise legal knowledge
- Solve legal problems by applying legal reasoning and critical analysis to generate and articulate appropriate solutions to legal issues
- Learn and work independently and take responsibility and accountability for own learning
- Contribute effectively to team work
- Engage in ethical legal decision-making and understand the professional behaviours and responsibilities of legal professionals

## Indicative student workload

A full time law degree has approximately the same workload as a full time job. Full time students should expect to commit around 40 hours per week to their studies, including attendance at class, extensive reading, writing, and critical analysis for completion of all assessments and preparation for exams. Part-time students should expect a pro-rata commitment depending on how many units they undertake.

The minimum expected workload for a Law unit will normally be around 150 hours, which includes attendance at class, reading, completion of any assessment, and preparation for the exam.

## Professional recognition

Deakin's Bachelor of Laws is designed to satisfy the university component of the requirements to become an Australian Lawyer set by the Victorian Legal Admissions Board (VLAB). In addition to completing an approved LLB degree, a person seeking entry is required to work for one year as a legal trainee, or to undertake a practical legal training (PLT) course.

## Career opportunities

Obtaining a law degree is normally the first step towards becoming a barrister or solicitor, and many students entering law school aspire to enter one of these branches of the legal profession. Upon completion of your degree and the additional practical legal training, you will be qualified to work as a solicitor or barrister in all legal fields, including commercial law, criminal law, family law, public international and human rights law, refugee law and personal injury law.

In addition, a Deakin Law degree offers many other career opportunities. As an alternative to practising as a barrister or solicitor, you may choose to enter business (eg. as a corporate lawyer, consultant, company administrator or business manager); government (as a lawyer or policy advisor with departments or authorities as diverse as the Attorney Generals Department, the office of Parliamentary Counsel, the Department of Foreign Affairs and Trade, the Director of Public Prosecutions, the Australian Securities and Investments Commission and the Australian Competition and Consumer Commission); industrial relations; public administration; education; media; politics; or in law reform.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Features of the program

### A range of commercial and public law electives

A distinctive feature of the Deakin Law degree is the large number of commercial law elective units offered in the course. You can choose to add a commercial focus to your degree by selecting elective units from the wide range of commercial electives available. However, the School also offers a number of public law electives, drawing upon the significant expertise of staff in the areas of private and public international law, criminal law, constitutional and human rights law, and health law.

## Clinical legal education

### Legal Internship

In conjunction with Community Legal Centres and other legal organisations, Deakin Law School offers a clinical skills unit. This involves students working in private law firms, companies employing in-house counsels, public legal centres and statutory bodies under the supervision of a legal practitioner. You will assist the practitioner to take instructions and to advise and represent clients. Clinical training of this nature is designed to teach you skills such as interviewing, counselling, negotiation, communication and advocacy. Deakin's Legal Internship enables you to gain an appreciation of certain aspects of legal practice and to extend and deepen your theoretical knowledge and critical thinking skills while working in a legal environment. Quotas apply and enrolment is via application.

Please visit the Legal Internship website, for more information.

### Deakin Law Clinic

Deakin Law School offers five teaching law firms which provide legal placements for students. The clinics operate under the supervision of qualified legal practitioners and offer opportunities for students to build legal skills in the following areas:

- Civil and commercial law
- Criminal law
- Employment law
- Venture law
- Family law

A Deakin Law Clinic can be taken as a Law Elective in year 3 or year 4 of your Law degree.

### Study abroad opportunities

Deakin Law School offers a number of study abroad opportunities such as the Chinese Commercial Law study tour. Each year a team of students represents the School in the prestigious Willem C. Vis International Commercial Arbitration Moot in Hong Kong and Vienna.

## Admission to legal practice

At present, to qualify for admission as a barrister and solicitor in Victoria, university graduates are required to complete legal traineeships (previously known as articles of clerkship) for one year or to complete a legal practice course. Institutes that offer Practical Legal Training are:

- The College of Law Victoria: Victorian Professional Program
- The Leo Cussen Institute [which holds a seven month full-time practical legal training course], plus an alternative on-line course.
- Australia National University Practical Legal Training Course offered in Melbourne.

## Course of study

The Deakin Law Program is designed to satisfy the university component of the requirements to become a barrister and solicitor in Victoria set by the Victorian Legal Admissions Board. Study may be undertaken on either a full-time or part-time basis.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate an understanding of the Australian legal system and the fundamental areas of knowledge required for legal practice as situated within international contexts and the broader contexts within which legal issues arise.
Communication	Communicate legal knowledge effectively to legal and non-legal audiences, both verbally and in writing
Digital literacy	Use a range of digitally-based technologies to locate, evaluate and disseminate information
Critical thinking	Exercise critical thinking, judgment and intellectual independence to evaluate, consolidate and synthesise knowledge relevant to legal doctrine and legal practice.
Problem solving	Apply legal reasoning and critical analysis to generate and articulate accurate and relevant responses to legal issues.
Self-management	Exercise responsibility and accountability for own learning, and possess abilities to reflect on own capabilities, performance and feedback to support personal and professional development.
Teamwork	Collaborate effectively in a team environment demonstrating constructive engagement and contribution to the team and the ability to draw on strengths of others.
Global citizenship	To be aware of and apply legal knowledge in different Reflect on the ethical and professional behaviours and responsibilities of legal professionals and demonstrate an understanding of the impact that different social, ethical, global or environmental perspectives have on exercising legal practice in the community

## Course rules

To complete the Bachelor of Laws, students must attain a total of 32 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. Most students choose to study 4 units per trimester, and usually undertake 2 trimesters each year.

To complete the course you must include:

- 18 credit points of core units
- completion of MAI010 Academic Integrity (0-credit-point compulsory unit)
- 14 credit points of elective units (no more than 5 elective units at Level 1)

The 14 credit points of elective units must include:

- a minimum of 6 credit points of law electives, including 1 credit point of WIL/practical/ experiential unit from a list.
- a minimum of 4 credit points of non-law electives (these may be selected from any undergraduate units offered by the University, subject to eligibility) (i.e. a maximum of ten credit points of Law Electives can be chosen)
- and 4 credit points of electives that may be Law

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MLL110	Legal Research and Statutory Interpretation
MLL111	Contract
MLL113	Legal Communication and Ethical Decision Making
MLL114	Criminal Law

^ MLT code denotes the study tour version of the unit.

*Note:*

- 1. Not all units will be offered every year.*
- 2. The Law School might from time to time develop new units to strengthen these lists, and develop other lists.*

## Work experience

This course provides students the opportunity to complete one or more elective work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Bachelor of Laws

<i>Award granted</i>	Bachelor of Laws
<i>Deakin course code</i>	M313

*Note: Offered to continuing students only. Continuing students should discuss unit selections with their enrolment officer.*

# Bachelor of Sport Development

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Sport Development
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	058665B
<i>Deakin course code</i>	M320
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Learn about sport pathways and coaching, and the marketing and management of sport, and turn your passion for sport into a rewarding career with Deakin's Bachelor of Sport Development.

Deakin is one of Australia's foremost universities in the delivery of sports courses. The Bachelor of Sport Development draws on streams of study to build an understanding of sport systems, programs and pathways, contemporary health and community development approaches, and the organisation, management and governance of sport organisations. You'll learn how to develop coaching programs and sport development philosophies, and examine theoretical aspects of the science of coaching and how sport is used as a vital tool for development. You'll undertake analyses on agencies and organisations within the sports industry; at the same time examining and developing skills utilised by professional sport managers.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

The Bachelor of Sport Development prepares students for careers in coaching, the leisure industry, sports science and in the field of community sports development.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate core knowledge of the distinction between the development of and through sport by analysis and application of theory in sport development, coaching, and allied disciplines in order to provide effective management in the development and delivery of sport.
Communication	Develop written, oral and visual communication skills around complex concepts for diverse stakeholders with interests in sport development and coaching including organisations in government and corporate sectors, and those involved in delivery of sport at community through to elite settings.
Digital literacy	Select and use a range of digital technologies in appropriate ways to manage and disseminate relevant information to stakeholders engaged in sport development and coaching.
Critical thinking	Demonstrate the ability to exercise reasoned judgement and reflection in relation to managing sport development and coaching.
Problem solving	Identify and address issues, formulate solutions related to the development and design of sport policy, systems, pathways and practices to implement efficient strategic and operational outcomes for enhancing the development of and through sport.
Self management	Demonstrate skills to work independently and take responsibility for continuing professional development.
Teamwork	Constructively engage in teams to contribute to collaborative outcomes and be able to take on roles towards demonstration of sound management of sport development and coaching.
Global citizenship	Engage as a professional in the sport industry with the skills that are applicable to a variety of contexts (sport science, coaching, sport management) and issues (global, social, ethical, cultural) in the development of and through sport.

## Course rules

To complete the Bachelor of Sport Development, students must attain a total of 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. Most students choose to study 4 units per trimester, and usually undertake 2 trimesters each year.

To complete the course you must include:

- 10 credit points of Faculty of Business and Law core units
- 10 credit points of Faculty of Health core units
- completion of MAI010 Academic Integrity (0-credit-point compulsory unit)
- a zero credit point safety induction unit
- 2 credit points of Faculty of Business and Law elective units
- 2 credit points of Faculty of Health elective units

## Course structure

### Faculty of Business and Law core units

MAI010	Academic Integrity (0 credit points)
MLC310	Sport and the Law
MMK101	Marketing Fundamentals

Offered to continuing students.

## Course overview

The Bachelor of Business has a strong practical focus, provides work integrated learning opportunities and equips you with the skills you need to get the job you want.

The course is designed to encourage you to learn through real experiences, which will help you integrate your knowledge, consolidate skills, tackle real problems, and reflect on the experience to develop your professional identity.

This degree will challenge you to take responsibility for your own learning, to engage with people through community and business, and to see yourself as a global citizen.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

The Bachelor of Business can lead to a variety of careers in Australia and overseas, including business analyst, project manager, customer relations manager, events manager, business development manager, procurement manager, business operations manager, small business owner or product manager.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Evaluate, analyse and apply business theory and practice for real world business problems.
Communication	Communicate in a coherent manner using a variety of platforms for a range of purposes and audiences.
Digital literacy	Use a range of digitally based technologies to communicate and create solutions to business issues

or an approved international learning experience (i.e. Study program, Student exchange, Overseas short course)

### Elective units

The remaining 12 credit points comprise at least one major sequence of 6 credit points as listed and any 6 credit points of general elective units.

## Work experience

Elective units may provide the opportunity for Work Integrated Learning experiences.

## Details of major sequences

### **Event Management – unit set code – MJ-M32505**

*Burwood (Melbourne), Cloud (online), Waterfront (Geelong)*~

#### Overview

Events are a feature of modern life. They are used to make cities and regions distinctive; mark milestones in our lives and families; promote products, companies and organisations; enable learning, professional development and networking; and celebrate our culture and identity. Not surprisingly, event management is a growing area of work that incorporates diverse fields such as business, government, education and the community sector.

The work of event managers is dynamic and challenging. They design events that appeal to diverse audiences, ensure the safety of participants, manage diverse stakeholders, limit the environmental impact of their activity, and deliver events on time and to budget. Event management is both a growing and evolving area of management practice. Underpinning this work are complex skills and knowledge involving design, marketing, communication, innovation and planning.

This major sequence draws together Bachelor of Management students' learning within the context of the design, planning, organisation and operation of an event. Event management practice is used to enable students' to apply and develop their management knowledge, understanding and skills. It also encourages students to consider management practice in diverse fields and contexts, and understand the innovative and dynamic role of managers.

#### Career outcomes

Event management is a growing area of work, practiced in diverse sectors and industries. Event managers are employed by business, government, education and not-for-profit organisations. This work is undertaken by staff working in marketing, public relations, fundraising, professional development, human resources, economic development, tourism, sport, community development and the arts. Event management work includes a range of team member, manager and consultancy roles.

#### Units

- MIS398 Project Management
- MMK295 Integrated Marketing Communications in the Digital Age ^
- MMM233 Business and the Environment
- MMM241 Entrepreneurship and Innovation
- MMM267 Business Logistics
- MMM312 Event Management

^ This unit was previously coded MMK393

~ Waterfront (Geelong) students will be required to undertake some units of study via Cloud (online)

### **Film and Television – unit set code – MJ-M32510**

*Burwood (Melbourne)*

#### Overview

Film studies develops your creative and critical thinking while providing you with a practical and theoretical grounding in the production and application of film, video and television.

#### Career outcomes

Graduates can be found working in advertising agencies, broadcast television, corporate communication companies, film education associations, film production companies, freelance film production, media associations and television corporations.

#### Units

- ACF103 Writing with the Camera
- ACF104 Screening History
- ACF202 Documentary Production
- ACF205 Television Studio Production
- ACF301 Independent Production Practice
- ACF320 The Australian Moving Image

**Financial Planning<sup>^</sup> – unit set code – MJ-M32501**

*Offered to continuing students only. Please see a student adviser for further advice.*

**Organisational Psychology – unit set code – MJ-M32504**

*Burwood (Melbourne), Waurn Ponds (Geelong)~, Cloud (online)*

**Overview**

Psychology is concerned with understanding human personality, behaviours, emotions, underlying mental processes and the factors that lead people to differ in the way they think and behave. In the Psychology major sequence you will be exposed to a contemporary integrative approach to psychology and human relationships, one that recognises the importance of, and interrelationships between personality, culture, and cognition, as well as the psychological functions and dysfunctions that shape behaviour in the real world.

**Units**

HPS111	Psychology A: Fundamentals of Human Behaviour
HPS121	Psychology B: Individual and Social Development
HPS203	The Human Mind
HPS204	Human Social Behaviour
HPS307	Personality
HPS308	Psychopathology

~ Waterfront (Geelong) students will undertake these units of study at Waurn Ponds (Geelong).

**Project Management – unit set code – MJ-M32506**

*Burwood (Melbourne), Waterfront (Geelong)\*, Cloud (online)*

**Overview**

Project management is a growing, dynamic profession that involves planning, coordinating, costing and evaluating projects of all sizes, as well as managing the people and risks involved. In a globalised economy project management is central to develop and deliver new products, services and infrastructure as well as implement new techniques and processes to facilitate change. Project management studies at Deakin are based on key project management methodologies to provide a holistic viewpoint with the aim to deliver generic project management skills that can be applied across most sectors and industries.

**Career outcomes**

The purpose of the Project Management major is to improve business and project management competencies, to provide students with professional development opportunities as project management practitioners, and to enhance the prospect for continued advancement in the chosen industry or sector.

**Professional recognition**

AIPM is the professional accreditation in Australia – which can be explored as a student, affiliate membership – with the onus on the student to continue to gain experience to move to a full membership. It does take certain level of experience and continuous learning/certifications/professional development, post the degree and five years' work experience to be able to attain an associate or full membership. Our understanding currently is that many organisations/work places are willing to support continuous learning today – for graduates to attain full memberships, while gaining work experience. Another option is the PMI (global- also has a Melbourne Chapter) offers student memberships – which is also recognised globally. The student membership can be offered, however, again the onus to continue gaining experience to next level and further certifications are left to students after graduation. The School may offer further training and units for accreditation in a Masters level degree, following the review of our Masters programs.

## Units

MIS201 Business Requirements Analysis  
 MMM276 Design Thinking ^  
 MIS352 Business Process Management  
 MIS398 Project Management  
 MIT399/MIS399 Applied Business Project  
 MMH356 Change Management

\* Waterfront (Geelong) students will be required to undertake some units via Cloud (online)

^ This unit was previously coded MIS276

\* MIT399 from Trimester 2 2019

### **People Management – unit set code – MJ-M32509**

*Burwood (Melbourne), Waterfront (Geelong)~, Cloud (online)*

#### Overview

An understanding of how to manage human resources is critical for all managers. This major provides skills and understanding of the critical dimensions required to successfully manage people. Students develop an understanding of strategic human resource management, human resource development, organisational behaviour and change management. In addition, the major also provides skills in workplace counselling and negotiation as well as an understanding of employment relations.

#### Units

MMH230 Fundamentals of Human Resource Management  
 MMH232 Human Resource Development  
 MMH250 Workplace Counselling and Negotiation  
 MMH349 Employment Relations  
 MMH356 Change Management  
 MMM240 Organisational Behaviour

~ Waterfront (Geelong) students will be required to undertake some units of study via Cloud (online)

### **Property and Real Estate – unit set code – MJ-M32502**

*Burwood (Melbourne)\*, Cloud (online)*

#### Overview

The property industry is one of the largest employment areas and is truly global. This major provides the skills and knowledge relating to a broad overview of property and real estate fundamentals.

#### Professional recognition

Professional recognition by the Australian Property Institute and the Royal Institution of Chartered Surveyors can be attained by completing M348 Bachelor of Property and Real Estate degree, D325 Bachelor of Property and Real Estate/Bachelor of Commerce degree, D396 Bachelor of Property and Real Estate/Bachelor of Laws or D336 Bachelor of Construction Management (Honours)/Bachelor of Property and Real Estate.

#### Units

MMP111 Introduction to Property

 MMP212 Property Investment  
 MMP221 Property Management  
 MMP311 Advanced Property Valuation  
 MMP321 Advanced Property Analysis

\* Burwood (Melbourne) students will be required to undertake some units via Cloud (online)

**Public Relations – unit set code – MJ-M32511***Burwood (Melbourne), Cloud (online), Waterfront (Geelong)~***Overview**

Public relations practitioners are 21st century communication specialists who manage and coordinate relationships between organisations, agencies and the public. With a focus on ethical and sustainable communication practices, the Public Relations major sequence builds key knowledge and skills in core public relations responsibilities such as: event management and campaigns; social media tactics and media relations; strategic planning, management and communication; and the allied field of marketing communication.

**Career outcomes**

Our graduates can be found working in corporations, government departments, as well as in not-for-profits and NGOs.

**Units**

ALR103	Introduction to Public Relations
ALR104	Strategic Communication and Writing
ALR210	Media Relations Strategy
ALA203	Integrated Communication
ALR383	Lobbying, Advocacy and Public Opinion
ACC303	Communication Research Practices

~ Waterfront (Geelong) students will be required to undertake some units of study at Waurin Ponds (Geelong)

**Sustainable Business Management^ – unit set code – MJ-M32503**

*Offered to continuing students only. Please see a student adviser for further advice.*

**Retail Management – unit set code – MJ-M32512***Burwood (Melbourne), Cloud (online), Waterfront (Geelong)~***Overview**

Retail managers for the 21st century understand the retail process from sourcing through to retail, brand management and evaluating consumers. The field of retailing is still growing but the impact of worldwide competition and short product life cycles makes retailing a challenging and dynamic field that needs retail practitioners who can operate in this volatile environment.

**Units**

MMK226	Retailing ^
MMK251	Services Marketing
MMK266	Consumer Behaviour
MMK280	Brand Management
MMK317	Merchandise Management ^
MIS313	Strategic Supply Chain Management

~ Waterfront (Geelong) students will be required to undertake some units of study via Cloud (online)

^ Unit not available in 2019. Please contact a student adviser.

**eBusiness – unit set code MJ-M32507**

*Offered to continuing students only. Please see a student adviser for further advice.*

**Other learning experiences**

This course includes the option of other learning experiences (ie an approved international learning experience).

# Bachelor of Information Systems

<i>Award granted</i>	Bachelor of Information Systems
<i>CRICOS course code</i>	078140K
<i>Deakin course code</i>	M340 (version 1)

*Note: Offered to continuing students only. Students commencing in 2019, please refer to the new version of the M340 Bachelor of Business Analytics course. Continuing students should discuss unit selections with their enrolment officer and refer to the 2018 Handbook.*

# Bachelor of Business Analytics

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Business Analytics
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>Deakin course code</i>	M340 (version 2)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Business Analytics (BA) refers to using technology to analyse, present and support decision-making from ‘big data’ held in organisational settings. It looks at the way businesses structure their information architecture, and the ways people and organisations use technology to improve their processes and workflows, and innovate their products or services. This course gives you the skills to analyse data, existing information systems, plan the introduction of commercial systems, and find solutions to common management problems (e.g. approaches to innovation) using business analytics software tools.

Business Analytics teaches you to use technology to capture and use digital information effectively in organisational settings. A business analytics professional focuses on applying technology and strategic decision-making to managing vast quantities of business’ data. In this course you will focus on critically analysing an organisation’s information needs so that you can decide on the best business analytics software (e.g. business intelligence, predictive analytics and social media analytics tools) to apply to solve real-life business problems.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Work integrated learning is a core component of this degree. An ‘Industry Campus’ program facilitates formal engagement between students and employers. This program aims to ensure that every student has multiple touch points with employers of business analytics graduates and business analytics professionals during their degree to help students identify potential employers and understand the career outcomes available to them.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Develop and apply broad and coherent knowledge of the foundation theories, concepts and practice of business analytics within an organisation or social setting.
Communication	Communicate ideas and concepts, with consideration to impacts and outcomes, to specialist and non-specialist audiences (using appropriate tools, technologies and techniques).
Digital literacy	Use appropriate business analytics technologies to source, evaluate and analyse information relevant to organisational or social settings.
Critical thinking	Apply critical and creative thinking skills in a variety of business analytics settings.
Problem solving	Identify and model problems and articulate broad business analytics solutions related to authentic situations in organisational or social settings.
Self-management	Demonstrate intellectual independence and reflect on self-performance to identify and plan future professional development.
Teamwork	Work collaboratively in diverse teams to produce and share business analytics solutions to problems in organisational or social settings.
Global citizenship	Apply ethical frameworks and principles in the development and deployment of business analytics solutions to meet stakeholder needs.

## Course rules

To complete the Bachelor of Business Analytics, students must attain a total of 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. Most students choose to study 4 units per trimester, and usually undertake 2 trimesters each year.

To complete the course you must include:

- 16 credit points of core units (including one Work Integrated Learning unit or an approved international learning experience)
- MIS010 Academic Induction for the Bachelor of Business Analytics (0 credit point unit)
- completion of MAI010 Academic Integrity (0-credit-point compulsory unit)
- 8 credit points of elective units (which may include a 6 or 8 credit point major sequence of your choice\*)

\* Please speak with a student adviser for further advice.

## Course structure

### Core units

MIS010	Academic Induction for the Bachelor of Business Analytics (0 credit points)
MAI010	Academic Integrity (0 credit points)
MIS171	Business Analytics
SIT112	Data Science Concepts
MIS201	Business Requirements Analysis
MIS202	Managing Data and Information
MIS211	Information Security, Governance and the Cloud
MIS231	Professional Ethics in the Digital Age
MIS271	Business Intelligence and Data Warehousing
MIS272	Predictive Analytics
MIS275	Decision Analytics
MIS362	Social Media Analytics and Data Driven Innovation
MIS313	Strategic Supply Chain Management
MIS384	Marketing Analytics
MIS398	Project Management
MIT399/MIS399	Applied Business Project
MIS373	Artificial Intelligence for Business

plus one unit of Work Integrated Learning chosen from:

MWL201	Community Based Volunteering
MWL202	Team Projects
MWL203	Work Based Learning
MWL301	Team Internship
MWL303	Business Internship

or an approved international learning experience (study program, student exchange, overseas short course)

# New from Trimester 1 2020

\* MIT399 from Trimester 2 2019

### Elective units

Plus eight credit points of general elective units

## Work experience

This course provides students the opportunity to complete one or more work integrated learning units.

This course includes Work Integrated Learning (WIL) formally registered as part of the course on the CRICOS register. The total work integrated learning hours will differ depending on the WIL unit you choose. For more information about WIL hours, please check the unit information in the handbook or the unit guide.

For information about how WIL units may impact student visa holder work rights, please visit <https://immi.homeaffairs.gov.au>. See Schedule 8 (8102) Visa Conditions.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Bachelor of Property and Real Estate

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Property and Real Estate
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	060343B
<i>Deakin course code</i>	M348
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

The Bachelor of Property and Real Estate prepares graduates for a career in property development, property valuation, financial management and a wide array of property-related professions.

The course offers core streams in property development, valuation and property market analysis with supporting units comprising business law, accounting and economic principles. Major sequences are available in financial management, global finance or sustainability.

The course has close links with professional bodies and is well regarded by industry. Students in this course undertake 'real life' education with a focus on current issues and relevant topics in the property industry.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Bachelor of Property and Real Estate has professional accreditation by the Australian Property Institute (API) and the Royal Institution of Chartered Surveyors (RICS). Graduates will meet the academic requirements to be eligible for registration as a Certified Practising Valuer (CPV).

## Career opportunities

Graduates are highly sought after and find employment as property developers, private or government valuers, property advisors, market research analysts, property sales and acquisitions, financiers, sustainability consultants, funds manager, property and asset managers, leasing agents and land economists. Graduates are able to specialise in all facets of the real estate market including commercial and industrial property, residential property and other related land uses in the built environment.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Employ broad and coherent theoretical and technical knowledge in the fields of property development, investment, property valuation, and property management in private and commercial real estate markets, both nationally and internationally. Apply stringent legal and ethical standards to all valuation, development, investment and management scenarios, including simulated and real world applications.
Communication	Prepare and present a selection of well developed, English proficient written, oral and visual analysis and reports comprised of property concepts and information to a range of stakeholders including investors, developers, regulators, clients, and colleagues.
Digital literacy	Identify, locate, evaluate, and synthesise information about market and submarket trends and forecasts, economic influences, statutory requirements and industry practices and communicate information and solutions to stakeholders utilising a range of diagnostic, analytical and reporting technologies.
Critical thinking	Evaluate and critically analyse data on property markets and indicators for the planning, design and development of commercial, industrial, retail and residential property.
Problem solving	Apply property evaluation and appraisal methodologies to identify solutions and sustainability strategies for a diverse range of authentic problems in property.
Self-management	Self manage and construct a body of evidence which demonstrates skills acquired. Self reflect and critique own performance and implement an action plan for continuing and future professional development.

Graduate learning outcomes	Course learning outcomes
Teamwork	Collaborate with others to undertake research which examines contemporary issues in property.
Global citizenship	Apply the interconnected principles of property planning, design, construction, management, maintenance and transference to a range of different environments and contexts reflecting social, sustainable, ethical, economic, and global perspectives.

## Course rules

To complete the Bachelor of Property and Real Estate, students must attain a total of 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. Most students choose to study 4 units per trimester, and usually undertake 2 trimesters each year.

To complete the course you must include:

- 16 credit points of core units (12 credit points of Property and Real Estate units and 4 credit points of Commerce units)
- completion of MAI010 Academic Integrity (0-credit-point compulsory unit)
- 8 credit points of electives (which may include a 4 cpt minor sequence in either Wealth Management, Finance, Sustainability or Global Studies)
- Level 1 – no more than 10 credit points
- Level 3 – at least 6 credit points

## Major sequences

Refer to the details of each major sequence for availability.

- Financial Management <sup>^\*</sup>
- Global Finance <sup>^</sup>
- Management <sup>^</sup>
- Marketing <sup>^</sup>
- Sustainability <sup>^</sup>

<sup>^</sup> Offered to continuing students only

<sup>\*</sup> Financial Management Major unavailable for D325 students majoring in Financial Planning (BCom).

## Minor sequences

Refer to the details of each minor sequence for availability.

- Wealth Management
- Finance
- Sustainability
- Global Studies

## Course structure

### Property and Real Estate core units

*Burwood (Melbourne), Cloud (online)*

#### Units

4 credit points of study comprising any combination<sup>†</sup> of:

- An approved overseas study abroad or exchange program
- A Work Integrated Learning (MWL-coded)\*

AIS101	Intercultural Communication
AIS204	Gender, Globalisation and Development

#### † Examples of study combinations

- Completion of 4 credit points of study abroad or exchange units
- Completion of 2 credit points of study abroad or exchange units, 1 credit point of a WIL unit and AIS101 (1 credit point)
- Completion of 1 credit point of study abroad/exchange unit, 1 credit point of a WIL unit, AIS101 (1 credit point) and AIS204 (1 credit point)

\* Level 2 or 3 unit undertaken overseas

## Other course information

*Please note: The eligibility of students for membership of the accrediting body is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

This course includes the option of other learning experiences (ie an approved international learning experience).

# Bachelor of Business (Sport Management)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Business (Sport Management)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	072593G
<i>Deakin course code</i>	M391
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

People working behind the scenes in sport are often just as important as the players on the pitches, courts and fields.

Deakin's Bachelor of Business (Sport Management) teaches you about the business aspects of sport including sport systems and organisations finance, promotion, management, and law

Ever considered managing an organisation that holds sporting competitions and major events? What about working in community programs that encourage participation in sport?

From national and state organisations to sporting goods manufacturers, facility designers to player agents and beyond, the Bachelor of Business (Sport Management) degree is perfect for anyone who'd love to work in the exciting world of sport.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Career opportunities in sport management have expanded considerably in the past 10 years. Sports including Australian Rules football, basketball, cricket, tennis and golf, plus national and state sporting organisations all require professionally framed people to work for them. In addition, there is a need for qualified people to manage facilities catering for sport at the local level through to those facilities hosting national and international competitions.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate core knowledge of the elements of management that are unique to sport business through analysis and application of theory from business and allied disciplines in order to provide effective management in sport organisations.
Communication	Develop written, oral and visual communication skills around complex concepts for diverse stakeholders involved in the sport industry including organisations in government and corporate sectors, and those involved in delivery of sport at community through to elite settings.
Digital literacy	Select and use a range of digital technologies in appropriate ways to manage and disseminate relevant information to stakeholders in the sport industry.
Critical thinking	Demonstrate the ability to exercise reasoned judgement and reflection in relation to managing in the sport industry.
Problem solving	Identify and address issues, formulate solutions related to commercial and social improvements in the sport industry and implement efficient strategic and operational outcomes for organisations in the sport industry.
Self-management	Demonstrate skills to work independently and take responsibility for continuing professional development.
Teamwork	Constructively engage in teams to contribute to collaborative outcomes and be able to take on roles towards demonstration of sound management within the sport industry.
Global citizenship	Engage as a professional in the sport industry with the skills that are applicable to a variety of contexts (professional, amateur) and issues (global, social, ethical, cultural).

## Course rules

To complete the Bachelor of Business (Sport Management), students must attain a total of 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. Most students choose to study 4 units per trimester, and usually undertake 2 trimesters each year.

To complete the course you must include:

- 16 credit points of core units (8 credit points of sport management units and 8 credit points of business units)
- completion of MAI010 Academic Integrity (0-credit-point compulsory unit)
- 8 credit points of elective units selected from Level 2 and above undergraduate units offered by the University, subject to eligibility (the 8 credit points of electives may include a major sequence)
- Level 1 – no more than 10 credit points
- Level 3 – at least 6 credit points (4 credit points must be course grouped to a Faculty of Business and Law undergraduate degree)

## Course structure

### Sport Management core units

MAI010	Academic Integrity (0 credit points)
MLC310	Sport and the Law
MMS100	Sport Organisation
MMS201	Sport in Society
MMS202	Managing High Performance Sport
MMS306	Sport Management Practicum
MMS307	Sport Facility and Event Management
MMS308	Sport Marketing
MMS313	Sport Leadership and Governance

### Business core units

MAA103	Accounting for Decision Making
MAE101	Economic Principles
MAF101	Fundamentals of Finance

MMK101	Marketing Fundamentals
MMM132	Management
MWL101	Professional Insight

### Elective units

The 8 credit points of elective units enable students to complete a major sequence of their choice, or students may choose any Level 2 or above units offered by the University including the elective unit listed below:

MMS314	Planning for Sport Policy and Development
--------	---

## Work experience

Elective units may provide the opportunity for Work Integrated Learning experiences.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

This course includes the option of other learning experiences (ie an approved international learning experience).

# Bachelor of Laws (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Laws (Honours)
<i>Campus</i>	This course is only offered in Cloud (online) mode
<i>Duration</i>	1 year part-time
<i>Deakin course code</i>	M412
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Bachelor of Laws (Honours) offers high-achieving law graduates additional advantages in establishing their career and a pathway to a PhD or Masters by Research. Honours students have the opportunity to build high-level research skills through conducting independent legal research.

In addition to equipping you with an understanding of law and the contexts in which it operates, the Bachelor of Laws (Honours) places a significant emphasis on building your high-level research skills through opportunities to conduct independent legal research.

Through the Bachelor of Laws (Honours), you will graduate with an honours-degree, giving you additional advantages in establishing your career or providing the foundations for postgraduate study.

The program satisfies the academic component to be admitted as a legal practitioner in Australia.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Deakin's Bachelor of Laws (Honours), like the Deakin Bachelor of Laws, satisfies the academic requirements needed to become an Australian Lawyer set by the Victorian Legal Admissions Board (VLAB). In addition to completing an approved LLB degree, a person seeking entry is required to work for one year as a legal trainee, or to undertake a practical legal training (PLT) course.

## Career opportunities

Obtaining a law degree is normally the first step towards becoming a barrister or solicitor, and most students entering law school aspire to enter one of these branches of the legal profession. A Law degree, especially when combined with a degree in Arts, Commerce, Management or Science, is a qualification that offers unequalled career opportunities. As an alternative to practising as a barrister or solicitor, you may choose to enter business (eg. as a corporate lawyer, company administrator or business manager); government service (as a lawyer with departments or authorities as diverse as the Attorney Generals Department, the office of Parliamentary Counsel, the Director of Public Prosecutions, and the Australian Securities Commission); industrial relations; public administration; teaching (at a university); or in law reform (as a research officer).

The Bachelor of Laws (Honours) degree provides students with demonstrated research skills, which are highly prized in legal practice, government, policy, and corporate roles. In particular, students who complete the Bachelor of Laws (Honours) will have a strong foundation for entry into postgraduate study and potential careers in academia, legal practice, and government roles.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	<p>Integrate theoretical knowledge and understanding of a coherent body of knowledge, including:</p> <ul style="list-style-type: none"> <li>• the fundamental areas of legal knowledge, the Australian legal system, and underlying principles and concepts, including international and comparative contexts,</li> <li>• the broader contexts within which legal issues arise, and</li> <li>• the principles and values of justice and of ethical practice in lawyers' roles,</li> <li>• applying such integrated knowledge to researching a major legal issue,</li> <li>• developing a specialised knowledge in the area of law researched.</li> </ul>
Communication	<p>Justify and communicate well developed communication skills, including:</p> <ul style="list-style-type: none"> <li>• communicating orally, in writing, and by any interpersonal means effectively, appropriately, and persuasively for both legal and non-legal audiences,</li> <li>• collaborating effectively, using technologies where the demonstration of autonomy, well developed judgement and responsibility takes place,</li> <li>• demonstrating high level written communication skills in the preparation and presentation of legal research.</li> </ul>

Graduate learning outcomes	Course learning outcomes
Digital literacy	<p>Use technologies to identify, locate, evaluate information for problem solving scenarios as well as communicating legal solutions, including:</p> <ul style="list-style-type: none"> <li>• identifying, evaluating and synthesising relevant factual, legal and policy issues, effectively using technologies where appropriate,</li> <li>• effectively using online law databases and other digital law resources in undertaking a research thesis on an important law matter,</li> <li>• finding, using, and disseminating information using technologies,</li> <li>• using digital sources to organize and present information in authentic and complex legal situations.</li> </ul>
Critical thinking	<p>Exercise critical judgement with the ability to problem-solve in unpredictable and sometimes complex scenarios, including:</p> <ul style="list-style-type: none"> <li>• identifying and articulating legal issues,</li> <li>• applying legal reasoning and research to generate accurate and relevant responses to legal issues,</li> <li>• demonstrating skills in research methods and undertaking a significant and novel legal research thesis,</li> <li>• engaging in critical analysis and making a choice amongst alternatives using reasoning,</li> <li>• thinking creatively in approaching legal issues and generating appropriate responses.</li> </ul>
Problem solving	<p>Create solutions to a wide range of legal problems, utilizing analytical and critical thinking with the ability to problem-solve, including:</p> <ul style="list-style-type: none"> <li>• identifying and articulating legal issues,</li> <li>• applying legal reasoning and research to generate accurate and relevant responses to legal issues,</li> <li>• acquiring legal research skills to undertake a significant research project on a major law problem,</li> <li>• engaging in critical analysis and making a choice amongst alternatives using reasoning,</li> <li>• thinking creatively in approaching legal issues and generating appropriate responses.</li> </ul>
Self-management	<p>Reflect on performance feedback to demonstrate long term development and to facilitate self improvement, including:</p> <ul style="list-style-type: none"> <li>• lifelong learning and working independently,</li> <li>• reflecting on and assessing capabilities and performance, and making use of feedback as appropriate, to support personal and professional development,</li> <li>• taking responsibility for personal actions,</li> <li>• undertaking a significant piece of independent research on a major law issue.</li> </ul>

Graduate learning outcomes	Course learning outcomes
Teamwork	Collaborate and communicate in teams, including: <ul style="list-style-type: none"> <li>• communicating in ways that are effective, appropriate and persuasive for legal and non-legal audience,</li> <li>• collaborating effectively with others from different disciplines and backgrounds,</li> <li>• working effectively with parties providing specialised services in support of independent legal research.</li> </ul>
Global citizenship	To be aware of and apply legal knowledge in different environments and global contexts, including: <ul style="list-style-type: none"> <li>• an understanding of approaches to ethical decision-making,</li> <li>• an ability to recognise and reflect upon with a developing ability to respond to ethical issues likely to arise in complex professional contexts,</li> <li>• an ability to recognise and reflect upon the professional responsibilities of lawyers in promoting justice and in service to the community,</li> <li>• an ability to exercise professional judgement, and as applying to undertaking a significant piece of legal research incorporating comparative and international perspectives,</li> <li>• an ability to recognise and reflect upon cultural and community diversity.</li> </ul>

## Course rules

To complete the Bachelor of Laws (Honours), students must attain a total of 4 credit points from the Bachelor of Laws (Honours) (M412).

To complete the requirements of the course you must include:

- 4 credit points of Bachelor of Laws (Honours) units consisting of:
  - MLH401 Legal Research Training (2 credit points)
  - MLH402 Legal Research Project (2 credit points)

## Course structure

### Bachelor of Laws (Honours) core units

MLH401 Legal Research Training (2cp)

MLH402 Legal Research Project (2cp)

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

Research and research skills are developed through two core 2 credit point units. MLH401 Legal Research Training, MLH402 Legal Research Project. Both units require students to demonstrate advanced knowledge and skills in the application of online and print research resources that relate to case law, legislation, and legal literature, and advanced writing skills that integrate critical thinking and synthetic analysis.

# Graduate Certificate of Business Administration

<i>Award granted</i>	Graduate Certificate of Business Administration

## Course overview

Improve your business skills, perform your current job more effectively and expand your career options.

The Graduate Certificate of Business Administration covers topics relating to organisational management, teaches you how to be a more effective business leader and expands your career options.

On successful completion of this course, students may enrol in the Graduate Diploma of Business Administration, Master of Business Administration (MBA), and combined MBA courses.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Deakin's Graduate Certificate of Business Administration will help you progress your career in all areas of business from administration to business strategy. As a graduate you may find employment in areas such as financial planning, corporate governance, human resource management, marketing and a range of other areas.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Articulated courses

M601.2, M701.3

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes

Most units (think of units as 'subjects') are equal to 1 credit point.

Students must also complete three 0 credit point units: MBA071, MBA072 and MBA073.

## Course structure

### Core units

Zero credit point pre-term units:

- MBA071 MBA Pre-Term: Getting to Grips with MBA Study
- MBA072 MBA Pre-Term: Accounting Fundamentals
- MBA073 MBA Pre-Term: Basic Business Statistics

### Core units

- MAI010 Academic Integrity (0 credit points)
- MBR701/MBA701 Strategy and Value Creation \*
- MBR702/MBA702 Financial Decision Making \*
- MBT703/MBA703 The Economic Environment ^

\* MBR code denotes residential version of the unit

^ MBT code denotes study tour version of the unit

### Elective units

Students may select any 1 credit point postgraduate unit.

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Mandatory student checks

Any unit which contains work-integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. Refer to the relevant unit guide.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

This course includes the option of other learning experiences including residential and study tour units.

- MBT720 Marketing Management (Tour)

# Graduate Certificate of Professional Accounting

Year	2019 course information
Award granted	Graduate Certificate of Professional Accounting
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Offered at Burwood (Melbourne)
Cloud Campus	Yes
Duration	0.5 year full-time or part-time equivalent
Deakin course code	M506
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

Students who have commenced prior to T1 2019, please refer to the 2018 handbook, or the handbook archives, for the relevant course structure.

## Course overview

This course enables you to study the principles of accounting and finance or take the first step towards becoming a qualified accountant.

Our Graduate Certificate of Professional Accounting gives you the flexibility to choose units that are right for you. For example, if you're just looking to add accounting skills to progress your career, you have the option to study units that match your interest. If you aspire to apply for the CA program of the Chartered Accountants Australia and New Zealand, you might undertake the units required for this pathway.

After completing this course, you can progress to the Graduate Diploma of Professional Accounting, Master of Professional Accounting, Master of Commerce or Master of Professional Accounting and Finance.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Students who wish to enter the:

- CA Program of the Chartered Accountants Australia and New Zealand (CA ANZ)
- Associate membership for the CPA Program, CPA Australia
- IPA Program of the Institute of Public Accountants (IPA) and
- Exemptions may apply for the Association of Chartered Certified Accountants (ACCA)

are advised that it is their responsibility to ensure that they take the appropriate units required for entry.

Students who have completed prior undergraduate or graduate units in accounting or other core knowledge areas are advised to have their qualifications assessed by their preferred professional organisation to ensure they complete the correct units.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Pathways

Upon completing the Graduate Certificate of Professional Accounting you can progress to the Graduate Diploma of Professional Accounting, Master of Professional Accounting, Master of Commerce.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate conceptual knowledge on basic accounting, and techniques in auditing and financial management including simplified applications to real world problems.
Communication	Draft user-friendly reports that clarifies the merits of alternate solutions and makes simple recommendations.
Digital literacy	Not explicitly addressed as a learning outcome in this award.
Critical thinking	Identify potential alternative solutions and evaluate the financial costs and benefits of such solutions.
Problem solving	Determine ways to resolve a firm's financial constraints through appropriate match with the theoretical solutions.
Self-management	Not explicitly addressed as a learning outcome in this award.
Teamwork	Not explicitly addressed as a learning outcome in this award.
Global citizenship	Not explicitly addressed as a learning outcome in this award.

## Course rules

To complete the Graduate Certificate of Professional Accounting, students must attain a total of 4 credit points of core units plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as 'subjects') are equal to 1 credit point.

## Course structure

### Units

Compulsory unit:

MAI010 Academic Integrity (0 credit points)

Select a minimum of 2 credit points of units from:

MAA703 Accounting for Management 1, 2, 4  
 MAA716 Financial Accounting 1, 2

## Course overview

Take your understanding of information systems and commerce to the next level with Deakin's Graduate Certificate of Information Systems.

Designed as an introductory course for professionals working in business and government, this course gives you a strong technical background in specific areas of eBusiness and supply chain management.

Whether you're a graduate of business, management, marketing, social policy or public administration, you can increase your employability with our Graduate Certificate of Information Systems.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

- Human Resources
- Humanitarian Assistance
- International Relations
- Public Health

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Financial Planning

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Financial Planning
<i>Duration</i>	1 year part-time
<i>Deakin course code</i>	M540
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*Please note: core units not available in Trimester 3.*

*Offered to continuing students only. Continuing students should discuss unit selections with their enrolment officer and refer to the Handbook Archives for their course structure.*

## Course overview

Help clients achieve business goals and financial objectives by offering practical solutions.

The Graduate Certificate of Financial Planning is a professionally-oriented course specifically designed to meet the education needs of the financial planning industry.

This financial planning course is perfect for those aspiring to join the financial planning industry as well as those currently employed in the industry.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

For those advisers listed on the Financial Advisers' Register as at 31 December 2018 and who already hold a relevant degree (as determined by FASEA), the completion of a four-unit Graduate Certificate of Financial Planning is intended to satisfy the education standards required to be able to continue to provide financial advice in Australia, subject to meeting other registration requirements prescribed by FASEA (including passing a National Adviser Exam).

All advisers who articulate and subsequently complete the Master of Financial Planning (MFP) will gain entry and advanced standing into the certification programs of the financial planning professional associations. MFP graduates will be eligible for entry into the certification programs of the professional financial planning associations – the CERTIFIED FINANCIAL PLANNER® (CFP®) Certification Program offered by the Financial Planning Association of Australia (FPA) and the Fellow Chartered Financial Practitioner (FChFP) designation offered by the Association of Financial Advisers (AFA).

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

# Graduate Certificate of Accounting and Law

<i>Award granted</i>	Graduate Certificate of Accounting and Law
<i>CRICOS course code</i>	092026F
<i>Deakin course code</i>	M549 (version 1)

*Offered to continuing students only. Students commencing in 2019, please refer to the new version of the M549 Graduate Certificate of Professional Accounting and Law course. Continuing students should discuss unit selections with their enrolment officer and refer to the 2018 Handbook.*

# Graduate Certificate of Professional Accounting and Law

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Professional Accounting and Law
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>CRICOS course code</i>	099103G
<i>Deakin course code</i>	M549 (version 2)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Deakin's Graduate Certificate of Professional Accounting and Law is designed for graduates who need specialist legal knowledge in their roles (regulatory, compliance or risk management positions), and who wish to combine this knowledge with an accounting qualification.

Graduates will have gained knowledge of accounting and commercial law, which may be built on through undertaking a graduate diploma or Master of Professional Accounting and Law.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The course offers graduates, units of study recognised by the professional accounting bodies such as CPA Australia, the Institute of Public Accountants, Chartered Accountants Australia and New Zealand and exemptions from the Association of Chartered Certified Accountants (ACCA).

Students who wish to enter the:

- CA Program of the Chartered Accountants Australia and New Zealand (CAANZ)
- Associate membership for the CPA Program, CPA Australia
- IPA Program of the Institute of Public Accountants (IPA) and
- Exemptions may apply for the Association of Chartered Certified Accountants (ACCA)

Students are advised that it is their responsibility to ensure that they take the appropriate units required for entry.

Students who have completed prior undergraduate or graduate units in accounting or other core knowledge areas are advised to have their qualifications assessed by their preferred professional organisation to ensure they complete the correct units.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

## Career opportunities

Graduates of this course would typically seek employment in areas of accounting such as financial accounting, auditing, taxation, management accounting, public sector accounting, forensic accounting or commercial law. However accountants can choose to work in a range of different environments depending on their own skills and preferences. They can choose to work in large firms, small public practices, industry, government, law firms, management consultancies, banking and financial services, not-for-profit organisations (NPOs) or educational organisations. Many also set up their own businesses.

Given the fundamental shift of accountants towards a wide-ranging advisory role, career opportunities are also becoming available in other vocations including working as financial planners, investment advisers, market analysts, tax consultants, advisers in mergers and acquisitions, in corporate recovery and insolvency, treasury banking, e-commerce or information technology.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Elective units may be selected that include clinical units (MLM718), which require compulsory attendance.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate conceptual knowledge of accounting and legal issues and applications to complex real-world problems
Communication	Draft user-friendly reports that clarify the merits and weaknesses of alternate solutions and makes defensible recommendations

# Graduate Certificate of Entrepreneurship

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Entrepreneurship
<i>Campus</i>	This course is only offered in FutureLearn mode, wholly online.
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year part-time
<i>Deakin course code</i>	M555
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award to be conferred upon completion is recognised in the Australian Qualifications Framework at Level 8 and the Framework for Higher Education Qualification (UK) at level 7.

*Please note: This is a joint venture with Coventry University delivered via FutureLearn*

*This course is not available to international students studying onshore in Australia.*

## Course overview

Explore and challenge the concepts of entrepreneurship, enterprise, innovation and leadership. Gain a deeper sense of your own potential to utilise an entrepreneurial mind-set to support your career development, personal goals and aspirations.

While entrepreneurship is closely linked with the start-up process, risk and venture creation, this degree is about entrepreneurialism – focusing on the spirit or intention to behave in an enterprising or entrepreneurial way. This may involve starting a new business or venture, but also includes an all-encompassing view of how an enterprising mind-set and skillset can be useful in employment or as an active social citizen.

Share your knowledge and become part of a global community that will encourage you to challenge your understanding of the concepts of enterprise and entrepreneurship.

## Indicative student workload

There is an expectation that the students will undertake at least 150 hours of learning and assessment activities (this time includes activity within FutureLearn as well as independent study/research/etc.) per Deakin credit point.

## Career opportunities

It is planned that the course will attract students from a wide cultural and discipline base, who will be able to share their knowledge and be part of a global community. The fundamental aim of the course is encourage students to develop their understanding of the concept and practice of enterprise and entrepreneurship. In so doing students will gain a deeper sense of their own entrepreneurial potential and be able to utilise this understanding to support their career and personal goals and aspirations. Given this, students who have completed the Graduate Certificate of Entrepreneurship are expected to utilize these skills within organisations by acting as intrapreneurs.

## Mandatory student checks

Coventry University's 'Disclosure of Criminal Convictions Policy and Procedure' applies to all applicants who accept the offer of a place.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/courses/fees/feestimator](http://deakin.edu.au/courses/fees/feestimator).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Evaluate accepted practices and norms using a range of tools and approaches to create change and drive entrepreneurial outcomes
Communication	Apply practical knowledge and skills of entrepreneurship to communicate and effect transformational change
Digital literacy	Not explicitly addressed as a learning outcome in this award.
Critical thinking	Analyse organisational complexities through multiple perspectives and cultures to demonstrate entrepreneurial insight and analyse and use transdisciplinary perspectives for value creation and positive social impact

Duration	1 year part-time
Deakin course code	M569
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

Please note: This course is only available for part-time study.

## Course overview

The Graduate Certificate of Financial Planning is aimed at existing advisers with an approved or relevant degree.

The course emphasises the professional responsibilities of the financial planner, both in an ethical and compliance sense, incorporating Ethics for Financial Services, Financial Behaviour and Decision Making and Financial Services Regulation.

This professionally-oriented course is designed to enhance professional capabilities, employability and career progression in the financial planning professional discipline. Graduates of the course will be able to demonstrate the application of core financial planning concepts and theories in authentic contexts, demonstrate knowledge and understanding of regulatory, ethical and legal obligations for financial advisers, apply appropriate communication skills within the context of providing advice on financial matters, and understand, synthesise and organise knowledge relevant to financial planning laws and ethical standards.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate the application of core financial planning concepts and theories in authentic contexts
Communication	Apply appropriate communication skills within the context of providing advice on financial matters.
Digital literacy	Effectively and critically navigate, evaluate and create information using a range of digital technologies.
Critical thinking	Analyse critically, evaluate and express sound judgement, ideas and reflection in relation to a range of core financial planning issues.
Problem solving	Summarise and explain the financial planning issue to be solved and apply the financial tools necessary to reach a solution.
Self-management	Develop skills necessary for independent study and learning in the field of financial planning.
Teamwork	Develop skills necessary for independent study and learning in the field of financial planning.
Global citizenship	Not explicitly addressed as a learning outcome in this award.

## Course rules

To complete the Graduate Certificate of Financial Planning, students must attain a total of 4 credit points, consisting of 3 credit points of core units and a one credit point elective unit chosen from a specified list, plus completion of MAI010 Academic Integrity and MAA071 Pre-Term: Getting to Grips with Postgraduate Study (0-credit-point compulsory units). Most units (think of units as 'subjects') are equal to 1 credit point.

## Course structure

### Core units

- MAI010 Academic Integrity (0 credit points)
- MAA071 Pre-Term: Getting to Grips with Postgraduate Study (0 credit points)
- MAA728 Financial Behaviour and Decision Making
- MAA769/MAI769 Ethics for Financial Services (Intensive)
- MLM717 Financial Services Regulation

\* MAI code denotes Intensive version of the unit

### *From Trimester 3 2019:*

- MAI010 Academic Integrity (0 credit points)
- MAA071 Pre-Term: Getting to Grips with Postgraduate Study (0 credit points)
- MAA728/MAI728 Financial Behaviour and Decision Making (Intensive)
- MAA769/MAI769 Ethics for Financial Services (Intensive)
- MLC714/MLI714 Financial Advice Regulation (Intensive)

### Elective units

Plus a 1 credit point elective unit from:

- MAA719 Superannuation and Retirement Planning
- MAA745 Financial Planning and Economic Fundamentals
- MLC703 Principles of Income Tax Law
- MLC707 Business Law

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of International Accounting

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of International Accounting
<i>Campus</i>	This course is an exit option only
<i>Cloud Campus</i>	No
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>Deakin course code</i>	M580
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Certificate of International Accounting can only be completed as an exit option from the Masters of International Accounting. The course is made up of 4 credit points of study where students are introduced to research tools and techniques in the core units of the course where analytical skills and the practical application of those skills are applied in professional contexts.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Course rules

To complete the Graduate Certificate of International Accounting (exit option only), students must attain a total of 4 credit points consisting of 3 credit points of core units and 1 credit point of elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MAA703	Accounting for Management 1,2,4
MAA717	Introductory Accounting 1,2,4
MAA718	Financial Accounting I 1,2,4

### Elective units

Select one unit:

MAA705	Corporate Auditing 2,3,4
MAA720	Financial Accounting II 1,2,4
MLC707	Business Law 1,2,4
MPT781/MPE781	Economics for Managers 1,2,*
MPF753	Finance 1,2,4

- \* MPT code denotes study tour version of the unit
- 1 Required by CPA Australia for Associate (foundation level) Membership.
- 2 Required by Chartered Accountants in Australia and New Zealand (CA ANZ) for entry to the CA Program.
- 3 For candidates who have completed an accredited degree in Australia, this unit may be taken as part of the CPA program. Other students must complete the unit before becoming an Associate Member of CPA Australia.
- 4 Required for exemptions to the ACCA fundamentals level program.
- 5 Unit covering required content to prepare students for the equivalent ACCA Professional level program exam.

Students who wish to obtain membership of CPA Australia, CA ANZ, IPA or ACCA, or obtain any applicable exemptions, are advised that it is their responsibility to ensure that they take the appropriate units required.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Leadership

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Leadership
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode.
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 to 1.5 years part-time
<i>Deakin course code</i>	M597
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*International students – Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin’s Cloud Campus.*

*This course was previously titled: Graduate Certificate of Professional Practice (Leadership).*

## Course overview

For the student wishing to supplement their base understanding about professional practice in leadership skills, the graduate certificate will give you a taste of study.

Recognise the capabilities displayed by pivotal leaders, through integration of theoretical investigation and professional practice, within this specialist program. Learn to drive results while engaging others in the journey and transforming an organisation to deal with technology disruption, changing customer needs and turbulent external environments. The emphasis for this program is on developing relevant skills, contemporary knowledge, and real experience, to develop the business leaders of tomorrow.

Delivered wholly online, this program makes it ideal for busy professionals who want to study and immediately apply the knowledge and skills obtained through the unit, in their own workplace. The Professional Practice Credential Assessment complements this course, where students provide evidence of their knowledge, skills, abilities, and experience for assessment, to obtain a suite of credentials that recognise their professional expertise.

Successful students may articulate into the Master of Leadership.

## Indicative student workload

Successful students typically spend about 150 hours in learning and assessment for each one credit point unit. The time required to prepare evidence for credential assessment varies based on the student’s existing documentation.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Pathways

Completion of the associated Graduate Certificate of Leadership is an alternative entry option for students wishing to attain a Master of Leadership but who have not completed a Bachelor Degree.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of contemporary leadership theory and practices, creating new discipline knowledge through applied research methods
Communication	Demonstrate advanced communication skills through the use of tools, techniques and media to gather data, and engage and inspire others
Digital literacy	Discover, analyse, synthesise and disseminate complex information, data and ideas to stakeholders, strategic partners and professional colleagues using a range of digital technologies and channels
Critical thinking	Systematically and critically analyse and test leadership styles, models and theories to optimise leadership impact within a specific cultural and operational context to drive strategy
Problem solving	Apply advanced problem solving skills to conceptualise, design, construct and advocate for recommended innovative solutions for complex leadership related issues
Self-management	Advance personal development and capacity as a leader to proactively drive and take responsibility for strategic results
Teamwork	Work across a range of professions, functions, contexts or teams to optimise collaborative outcomes, to improve strategic outcomes
Global citizenship	Define and reinforce the vision and values that orient collective effort, socially responsibility and ethical decision making

## Course rules

The Graduate Certificate of Leadership requires successful completion 2 credit points of core units, completion of MAI010 Academic Integrity (0-credit-point compulsory unit) and 4 Professional Practice credentials.

## Course structure

### Core unit

- MAI010 Academic Integrity (0 credit points)
- MPL700 Leadership Practice with Impact
- MPL701 Leadership Challenges

## Credentials

Students must successfully complete four Professional Practice credentials which include two core credentials (Communications and Self-management) plus two Leadership Specialist Knowledge credentials.

Successful attainment of Professional Practice credentials is based on evidence provided from professional practice, hence recognition through authentic learning experiences. All professional practice credentials are linked to the Deakin Graduate Learning Outcomes and will be assessed within the context of the leadership discipline. The credentials may be attempted separately or simultaneously and are assessed by an assessment panel that includes both academic and industry representatives. Please refer to the table below for the list of credentials.

### *Graduate Certificate credential requirements*

Core credentials	Minimum level*^	Currency*
CRCOM-A1 Communication	5 (Masters-Aligned)	5 years
CRLDP-A1 Leading and developing people	5 (Masters-Aligned)	5 years
CRDSR-A1 Driving strategic results	5 (Masters-Aligned)	5 years
CRTWK-A1 Teamwork	5 (Masters-Aligned)	5 years

\* Applicants who have not satisfied the level requirement, or who have successfully achieved the credential but not within the required timeframe may be permitted to seek re-credentialling.

^ There are five levels and these are aligned with recognized “exit points” from the education sector, the AQF, work levels and industry frameworks. Level 5 is aligned to the AQF Masters Level.

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Business Administration

<i>Award granted</i>	Graduate Diploma of Business Administration
<i>CRICOS course code</i>	035038G
<i>Deakin course code</i>	M601 (version 1)

*Offered to continuing students only. Students commencing in 2019, please refer to the new version of M601 Graduate Diploma of Business Administration. Continuing students should discuss unit selections with their enrolment officer and refer to the 2018 Handbook.*

## Course overview

Enhance your undergraduate degree with versatile business expertise. Deakin's Graduate Diploma of Business Administration is designed to provide you with a global business perspective, broadening your career options and paving the way to take on our Master of Business Administration (MBA) – ranked in the top 15 online MBAs globally.

This one-year course covers a broad range of topics relating to all aspects of organisational management, as well as the development of the creative, analytical and interpersonal capabilities crucial to business leadership, including people management and marketing.

The course will prepare you for roles relating to business management and marketing across a range of settings. The business skills gained in this qualification can also lead to progression in your current career.

The Graduate Diploma of Business Administration allows articulation into the Master of Business Administration (MBA) and combined MBA courses.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Participation requirements

# Graduate Diploma of Human Resource Management

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Human Resource Management
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	M615
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Human Resource Management is a specialised course designed to provide a qualification for graduates and/or those with significant experience working in the human resources field in business, government and industry. The course is accredited by the Australian Human Resources Institute (AHRI).

In addition, the course aims to meet the needs of senior management whose duties require them to take on responsibilities in human resources development and management. The course provides students with the skills and knowledge to fit them for the human resource development and management roles that their employment demands.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Course rules

The Graduate Diploma of Human Resource Management requires completion of 8 credit points comprising 7 credit points of core units and a 1 credit point elective unit, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MMH701	Human Resource Strategy

<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Gain real-world business expertise that you can apply to a range of careers or to the management of your own business. Deakin's Graduate Diploma of Commerce will give you a foundation in commerce and business theories with opportunities to put them into practice through hands-on industry experience.

The Graduate Diploma of Commerce builds on an undergraduate qualification in any discipline. This one-year program is designed to give you advanced knowledge of the key business disciplines, which can then be applied to business-related careers across any field.

On completion of the Graduate Diploma of Commerce you may progress to Deakin's Master of Commerce.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

# Graduate Diploma of Marketing

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Marketing
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	092728J
<i>Deakin course code</i>	M628
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*Please note: This course is available part-time only in Trimester 3.*

## Course overview

The Graduate Diploma of Marketing is a well-balanced course that gives mid-career professionals a solid grounding in the key functional areas of professional market management. This specialist program will impart skills to plan and implement marketing strategies. You will learn ways to systematically:

- communicate with customers,
- build brands,
- enhance your customers' experiences and
- deal with the intricacies of marketing online and to international audiences.

This is a very practical course that provides significant exposure to industry leaders who present as guest lecturers. Coursework may include field visits to businesses, "live" projects that help real corporations solve their marketing issues, internships and international study tours where you get to visit the world's leading corporations. These activities will give you the opportunity to build valuable and practical experience to enrich your resume, professional network and gives you a step up in your career.

You may gain entry to the Graduate Diploma of Marketing program by completing the Graduate Certificate of Marketing. Graduates of the Graduate Certificate of Marketing may wish to continue to Deakin's Master of Marketing degree.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates can expect to find entry level positions in areas of general marketing (e.g., marketing manager, product manager, and client manager), branding (brand manager), research (junior researcher), and marketing communications management.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate specialised and experience-based knowledge of advanced concepts and theories relating to marketing and business management.
Communication	Apply and demonstrate advanced communication skills in marketing and business contexts.
Digital literacy	Obtain, manage, interpret and disseminate appropriate marketing information using digital technologies.
Critical thinking	Analyse and apply critical analysis skills to the (business) marketing environment.
Problem solving	Apply a range of problem solving techniques to create solutions to real-world and complex marketing applications.
Self-management	Demonstrate advanced skills to work and learn independently, and take responsibility for personal and professional development.
Teamwork	Collaborate with people from different backgrounds and contribute to the management of business and marketing teams.
Global citizenship	Engage as a marketing professional in a manner reflective of an understanding of ethical principles, professional codes of conduct and cultural variations.

## Course rules

To complete the Graduate Diploma of Marketing, students must attain a total of 8 credit points, consisting of 8 credit points of core units, plus completion of MAIO10 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as 'subjects') are equal to 1 credit point.

## Course structure

### Core units

MAI010 Academic Integrity (0 credit points)  
MPT732/MPK732 Marketing Management #  
MPK701 Research Design and Analysis

*Please note: this course is only available in Trimester 1 and 2.*

## Course overview

Boost your existing property knowledge with expertise in valuation and property development, or get the qualifications you need to start a new career in the property industry. Deakin's Graduate Diploma of Property will prepare you for a range of roles including property development, property management and valuation.

The Graduate Diploma of Property has been designed for professionals such as architects, surveyors and construction managers looking to broaden their careers in the built environment. The course is also ideal for graduates with degrees in commerce, management or law disciplines wishing to move into the property field.

The course aims to develop and refine your core professional skills, particularly related to the fields of property development and valuation. You'll establish an understanding of the various stakeholders in the property and real estate market, and how they collaborate to develop and manage property.

The course brings together a range of built environment disciplines, from sustainable construction to property management. There is a focus on sustainability and its economic, social and environmental relevance in the context of property development.

Other study areas include statutory valuation, property investment, property law and practice, property development, and advanced property valuation.

The Graduate Diploma of Property is recognised and professionally accredited by the Australian Property Institute (API). This accreditation ensures that the course is of the highest quality as required by the API.

The Graduate Diploma of Property is academically accredited for Certified Practising Valuer (CPV) and Certified Property Practitioner (CPP), providing there has been prior study in the knowledge field areas of:

1. Finance and Accounting
2. Commercial Law
3. Property Economics or Economics

Professional association recognition means that your qualifications will be professionally recognised by employers and clients across Australia.

## Professional recognition

The Graduate Diploma of Property is recognised and professionally accredited by the Australian Property Institute (API). This accreditation ensures that the course is of the highest quality as required by the API. The Graduate Diploma of Property is academically accredited for Certified Practising Valuer (CPV) and Certified Property Practitioner (CPP), providing there has been prior study in the knowledge field areas of:

1. Finance and Accounting
2. Commercial Law
3. Property Economics or Economics

## Career opportunities

Career paths available for graduates with a qualification in property include, but are not limited to:

- Asset Manager
- Business Broker
- Investment Trust Manager
- Portfolio Manager
- Property Consultant
- Property Developer
- Property Finance Consultant
- Property Manager
- Property Researcher
- Rural Property Broker/Consultant
- Sales and leasing Negotiator
- Valuer

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M511.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Employ specialised knowledge and apply professional, legal and ethical standards in the fields of property development, investment, property valuation, property management and sustainable construction, in private and commercial real estate markets, both nationally and internationally.
Communication	Prepare and communicate (orally, visually and in writing) complex property information and analysis to a range of stakeholders including investors, developers, regulators, clients and colleagues in order for informed decisions may be made.
Digital literacy	Use a range of advanced digitally based technologies in professional practice and scholarly activities within the property related environment.
Critical thinking	Critically analyse, evaluate and synthesise complex data and specialist information on property markets and indicators for the planning, design and development of commercial, industrial, retail, residential property and other specialist property, e.g. property for educational purposes.
Problem solving	Apply property theories and concepts to evaluate and appraise methodologies to critically identify and develop sustainable solutions and strategies for a diverse range of complex and authentic problems in property industry.
Self-management	Demonstrate autonomy, well developed judgment and responsibility to undertake self-directed work and learning relating to specialist property concepts.
Teamwork	Collaborate with others to undertake research which examines and evaluates contemporary issues in property.
Global citizenship	Examine and evaluate the ethical, sustainability, economic and global factors that impact the interconnected theories and principles of property development, investment, construction, management and maintenance.

## Course rules

To complete the Graduate Diploma of Property, students must attain a total of 8 credit points of core units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units are equal to 1 credit point.

## Course structure

<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*Please note: core units not available in Trimester 3.*

*Offered to continuing students only. Continuing students should discuss unit selections with their enrolment officer and refer to the Handbook Archives for their course structure.*

## Course overview

Launch or advance your career as a financial planner, and advise clients how to get the most out of their investments. Learn about portfolio management, investment, securities and retirement planning when you study financial planning at Deakin.

The Graduate Diploma of Financial Planning is a professionally-oriented course specifically designed to meet the education needs of the financial planning industry. The course is aimed at those aspiring to join the financial planning industry as well as those currently employed in the industry wishing to advance their knowledge.

On completion you may wish to articulate into Deakin's Master of Financial Planning.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Graduate Diploma of Financial Planning (GDFP) will be nominated for approval with the new financial planning standards body, the Financial Adviser Standards and Ethics Authority (FASEA) as satisfying the education standards required to be able to provide financial advice in Australia, subject to meeting other registration requirements prescribed by FASEA (including completion of a Professional Year for Provisional Relevant Providers and passing a National Adviser Exam). FASEA have yet to formally approve Deakin's Graduate Diploma of Financial Planning.

All advisers who articulate and subsequently complete the Masters of Financial Planning (MFP) may gain entry and advanced standing into the certification programs of the financial planning professional associations. Graduates may be eligible for entry into the certification programs of the professional financial planning associations – the CERTIFIED FINANCIAL PLANNER® (CFP®) Certification Program offered by the Financial Planning Association of Australia (FPA) and the Fellow Chartered Financial Practitioner (FChFP) designation offered by the Association of Financial Advisers (AFA).

The GDFP allows students to meet the education requirements of Society of Trust and Estate Practitioners (STEP) following the completion of estate planning, superannuation, tax and trust administration subjects.

The GDFP also allows students to meet the education requirements of the Tax Agent Services Act (TASA) following completion of Australian Tax Law and Commercial Law units approved by the Tax Practitioners Board (TPB) as their electives.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate an advanced understanding and application of core financial planning concepts and theories.
Communication	Apply appropriate communication skills within the context of providing advice on financial matters.
Digital literacy	Use appropriate digital technologies to identify and disseminate complex information, concepts and theories.
Critical thinking	Apply a systematic research process and develop a clearly articulated argument to support a view and use it to justify one or more conclusions.
Problem solving	Apply problem solving skills necessary to conceptualise and solve complex issues in financial planning.
Self-management	Demonstrate independent study and learning in the field of financial planning.
Teamwork	Identify challenges associated with organising and managing teams in professional contexts and the importance of providing an instructional framework to nurture teamwork.
Global citizenship	Not explicitly addressed as a learning outcome in this award.

<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	099102J
<i>Deakin course code</i>	M649
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Deakin's Graduate Diploma of Professional Accounting and Law is designed for graduates who need specialist legal knowledge in their roles (regulatory, compliance or risk management positions), and who wish to combine this knowledge with an accounting qualification.

Graduates will have gained a solid grounding in accounting and commercial law, through undertaking a selection of specialised accounting and law elective units. You may then be eligible to articulate into the Master of Professional Accounting and Law.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The course offers graduates units of study recognised by professional accounting bodies such as the CPA Australia, the Institute of Public Accountants, Chartered Accountants Australia and New Zealand and exemptions from the Association of Chartered Certified Accountants (ACCA).

Students who wish to enter the:

- CA Program of the Chartered Accountants Australia and New Zealand (CA ANZ)
- Associate membership for the CPA Program, CPA Australia
- IPA Program of the Institute of Public Accountants (IPA) and
- Exemptions may apply for the Association of Chartered Certified Accountants (ACCA)

Students are advised that it is their responsibility to ensure that they take the appropriate units required for entry.

Students who have completed prior undergraduate or graduate units in accounting or other core knowledge areas are advised to have their qualifications assessed by their preferred professional organisation to ensure they complete the correct units.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

## Career opportunities

Graduates of this course would typically seek employment in areas of accounting such as financial accounting, auditing, taxation, management accounting, public sector accounting, forensic accounting or commercial law. However accountants can choose to work in a range of different environments depending on their own skills and preferences. They can choose to work in large firms, small public practices, industry, government, law firms, management consultancies, banking and financial services, not-for-profit organisations (NPOs) or educational organisations. Many also set up their own businesses.

Given the fundamental shift of accountants towards a wide-ranging advisory role, career opportunities are also becoming available in other vocations including working as financial planners, investment advisers, market analysts, tax consultants, advisers in mergers and acquisitions, in corporate recovery and insolvency, treasury banking, e-commerce or information technology.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Elective units may be selected that include clinical units (MLM718), which require compulsory attendance.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate conceptual knowledge of accounting and legal issues and applications to complex real-world problems
Communication	Draft and present user-friendly reports that clarify the merits and weaknesses of alternate solutions and makes defensible recommendations
Digital literacy	Not explicitly addressed as a learning outcome in this award
Critical thinking	Identify potential alternative solutions and evaluate both financial and legal aspects to such solutions
Problem solving	Determine ways to resolve practical constraints through appropriate match with the potential accounting and legal remedies
Self-management	Not explicitly addressed as a learning outcome in this award
Teamwork	Not explicitly addressed as a learning outcome in this award
Global citizenship	Not explicitly addressed as a learning outcome in this award

## Course rules

To complete the Graduate Diploma of Professional Accounting and Law, students must complete an online induction on foundations of law (MLM070 Academic Induction for Professional Accounting and Law) and MAI010 Academic Integrity (0-credit-point compulsory units) within their first trimester, and attain a total of 8 credit points consisting of 2 credit points of core units, 3 credit points of Accounting elective units and 3 credit points of Law elective units chosen from a list.

Most units (think of units as 'subjects') are equal to 1 credit point.

## Course structure

## Course overview

Learn advanced skills and analytics techniques to interpret data, analyse business environments, and develop solutions for authentic problems. Complementing your undergraduate degree in any discipline, Deakin's Graduate Diploma of Business Analytics is designed to provide you with the most up-to-date skills for business performance analysis.

Businesses and governments now have access to massive volumes of data and require skills and expertise to analyse this information for strategic decision making. This course is designed to provide you with the knowledge and skills to build predictive models and use data mining tools with 'big data'. You'll get the opportunity to gain hands-on experience with one of the most widely used predictive analytics software tools globally.

Deakin's Graduate Diploma of Business Analytics is a collaborative education program developed with industry. You'll be trained with a broad skill set that enables you to develop analytics based solutions for business. The course introduces you to a range of internationally-recognised business intelligence and analytics tools and you'll have access to analytics certification programs by market leaders IBM, SAS and Microsoft. You'll find out how to take data driven, evidence-based approaches to business decision making and business performance analysis. Plus, you'll get an understanding of business metrics and the analytical techniques that transform both structured and unstructured data into meaningful information for the purpose of decision making and understanding and reviewing business performance. Other skills you'll develop include problem solving, business metrics, and quantitative reasoning so that you can review business performance to find problems or areas of opportunities, and identify patterns and trends in data using descriptive analytics. You'll also learn how information and communication technologies (ICT) investments including business analytics generate value for a business.

On completion of the Graduate Diploma of Business Analytics you will have developed a broad set of business analytic skills highly sought after in every industry sector, particularly within professional services firms and government.

The course allows articulation into Deakin's Masters of Business Analytics.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

As a Graduate of the Graduate Diploma of Business Analytics you will have developed a broad set of business analytic skills highly sought after in every industry sector, particularly within professional services firms and government.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate an advanced understanding of contemporary body of knowledge of business analytics to work in professional contexts
Communication	Interpret and effectively communicate complex business analytics findings to both specialists and non-specialists
Digital literacy	High level of use of business analytics technologies to source information, analyse complex business data and disseminate findings
Critical thinking	Evaluate complex business information using critical and analytical thinking and judgment
Problem solving	Use advanced skills and analytics techniques to interpret data, analyse business environments, and develop solutions for authentic (real world and ill-defined) problems.
Self-management	Not explicitly addressed as a learning outcome in this award.
Teamwork	Collaborate constructively in teams to produce and share specialised and integrated analytic solutions to complex business problems.
Global citizenship	Engage ethically in a business analytics professional context with diverse communities and cultures in a global context.

## Course rules

To complete the Graduate Diploma of Business Analytics, students must attain a total of 8 credit points, consisting of 6 credit points of core units and 2 credit points of elective units which may be selected from any postgraduate units offered by the University, subject to eligibility, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as 'subjects') are equal to 1 credit point. Students are encouraged to use the electives units to gain depth or sector expertise.

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)

<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The arts and cultural sector is a significant and growing industry in Australia and globally. The sector requires strong, capable and passionate arts managers, and this course is an acknowledged education leader in the field.

Highly effective arts and cultural managers need expertise in management, marketing and finance as well as leadership and innovation. These disciplines and skills are essential to the success of arts and cultural organisations if they are to be culturally vibrant and financially viable.

This course combines the structure of a business education with focused industry expertise from the arts and cultural sectors.

You'll develop strategic marketing skills relating to audience development, branding, market segmentation, promotions and e-marketing. Other areas of study include: event management, cultural policy and its context, strategic planning, volunteer management, fundraising, sponsorship and philanthropy, management of community creative processes, and managing entrepreneurial activity within the creative industries.

The course is led by staff with extensive practical experience in management and leadership in the arts and cultural sectors. You'll have the opportunity to engage with a range of industry representatives, gain exposure to the work of cutting edge practitioners and thinkers, and integrate your work and learning through work placement opportunities.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

This program prepares graduates for leadership roles across the range of cultural organisations including: performing arts, visual arts, festivals, community events, facilities, publishing houses, music venues, screen industries, cultural heritage and museums.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

*Please note: This course is only available for part time study in Trimester 3.*

## Course overview

Build on your knowledge of modern financial planning principles by studying the Graduate Diploma of Financial Planning. Graduate with a FASEA-approved degree, ready to thrive in an evolving financial planning landscape.

Want to see your employability soar with a qualification that's in demand across the industry?

Recent changes to the Australian finance industry require financial planners to meet new education standards set by the Financial Adviser Standards and Ethics Authority (FASEA). What does this mean for current and aspiring financial planners? If you want to provide financial advice beyond 2023, you'll need to complete a FASEA-approved course like Deakin's Graduate Diploma of Financial Planning.

This professionally oriented course prepares graduates for career progression. If you're a current financial planner returning to study, you'll gain new knowledge and analytical skills that help you provide advice to clients on how to get more out of their investments. Under the guidance of industry-active teachers, you'll learn about:

- portfolio management
- the digital tools of the modern financial planner
- investment, securities and retirement planning.

Importantly, the Graduate Diploma of Financial Planning places a strong emphasis on the professional responsibilities of the modern financial planner, both in an ethical and compliance sense. Industry reforms have created an increased demand for ethical decision-makers, putting Deakin graduates in a strong position to stand out from the pack.

On completion of the Graduate Diploma of Financial Planning, you may wish to articulate into Deakin's Master of Financial Planning.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Graduate Diploma of Financial Planning is a FASEA-approved course, making it a recognised pathway towards becoming a registered financial planner.

Graduates will satisfy the education standards prescribed by FASEA to be able to provide financial advice in Australia, subject to meeting other registration requirements prescribed by FASEA (including completion of a Professional Year for Provisional Relevant Providers and passing a National Adviser Exam).

Students who complete required elective units in estate planning, superannuation, tax and trust administration meet the education requirements of Society of Trust and Estate Practitioners (STEP).

## Career opportunities

From 1 January 2019, FASEA's new education standards come into place and, by 1 January 2026, all financial planners will need an approved qualification. These reforms have created an increased demand for registered financial planners with a high-level understanding of what it means to provide responsible advice.

The Graduate Diploma of Financial Planning is approved by FASEA, ensuring Deakin students graduate with the right qualification and skills to take advantage of this demand.

Whether you're currently working in the industry or looking to move into a financial planning role, you'll be prepared to excel in a variety of positions, including:

- financial adviser
- insurance adviser
- business development manager
- superannuation consultant
- portfolio analyst
- personal financial planner
- investment banker
- paraplanner
- claims administrator
- compliance manager
- risk adviser.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here:

[deakin.edu.au/courses/key-dates](https://deakin.edu.au/courses/key-dates)

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M569.

## Fees and charges

# Graduate Diploma of International Accounting

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of International Accounting
<i>Campus</i>	This course is an exit option only.
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	M680
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of International Accounting (exit option only) consists of six core and two elective units. These units in combination prepare students from any discipline background for an accounting career. The core units equip students with fundamental level management and financial accounting knowledge and also include finance and law units. Students have the opportunity to choose two electives from a choice of four, which include an accounting, law, management and economics unit. Hence, depending on students' career and further education plans, they can choose to enhance their accounting knowledge or widen their business and law knowledge. This course covers half of the credits (8 out of 16) required to complete the Master of International Accounting (MIA) course which is aligned to the ACCA qualification.

The units in the Graduate Diploma of International Accounting may lead to exemptions from the Association of Chartered Certified Accountants (ACCA) fundamental papers, the Chartered Accountants of Australia and New Zealand (CAANZ) and CPA Australia. Students are advised to seek for advice in choosing their elective units if they plan to study for one of the above professional accounting qualifications.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Course rules

To complete the Graduate Diploma of International Accounting, students must attain a total of 8 credit points consisting of 6 credit points of core units and 2 credit points of elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

## Course structure

### Core

MAI010	Academic Integrity (0 credit points)
MAA703	Accounting for Management 1,2,4
MAA717	Introductory Accounting 1,2,4
MAA718	Financial Accounting I 1,2,4
MAA720	Financial Accounting II 1,2,4
MLC707	Business Law 1,2,4
MPF753	Finance 1,2,4

### Electives

Select a total of 2 credit points:

MAA705	Corporate Auditing 2,3,4
MLC703	Principles of Income Tax Law 2,3,4
MPY781/MPE781	Economics for Managers 2,3,4,*

\* MPT code denotes study tour version of the unit

- 1 Required by CPA Australia for Associate (foundation level) Membership.
- 2 Required by Chartered Accountants in Australia and New Zealand (CA ANZ) for entry to the CA Program.
- 3 For candidates who have completed an accredited degree in Australia, this unit may be taken as part of the CPA program. Other students must complete the unit before becoming an Associate Member of CPA Australia.
- 4 Required for exemptions to the ACCA fundamentals level program.
- 5 Unit covering required content to prepare students for the equivalent ACCA Professional level program exam.

Students who wish to obtain membership of CPA Australia, CA ANZ, IPA or ACCA, or obtain any applicable exemptions, are advised that it is their responsibility to ensure that they take the appropriate units required.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Course overview

Increasing complexity of global markets and reporting requirements suggest the growing importance of accounting as a dynamic and exciting profession. Accountants are financial information specialists who inform business decision making within a wide range of organisations.

This course offers you the opportunity to complement your overall management knowledge and expertise, or to establish a pathway to further studies towards membership of CPA Australia or entry into the CA Program.

This course provides pathways to professional accounting qualifications for graduates of any discipline. You'll develop the skills, technical knowledge and understanding required in accounting and finance, and their application within the broader world of business.

You'll explore important topics in management accounting including decision making and performance management in organisations as well as financial accounting and reporting. In addition to core accounting topics, the course introduces the fundamentals of accounting theory and corporate social responsibility reporting. You'll also gain an understanding of the regulatory and conceptual frameworks that underpin accounting for corporate entities and of the logic behind existing accounting rules.

Deakin Business School's Work Integrated Learning program gives you the opportunity to enhance your job prospects with real world experience. In the finance unit you'll have the opportunity to engage with business within the workplace and in doing so develop practical and analytical finance skills by participating in real-world projects.

You'll develop analytical skills for making key financial management decisions. The unit offers useful skills and knowledge relevant both for running a business or taking roles in managerial positions within large companies.

Deakin Business School's Work Integrated Learning program gives you the opportunity to enhance your job prospects with real world experience. In the finance unit you'll have the opportunity to engage with business within the workplace and in doing so develop practical and analytical finance skills by participating in real-world projects.

You'll develop analytical skills for making key financial management decisions. The unit offers useful skills and knowledge relevant both for running a business or taking roles in managerial positions within large companies.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Completion of the Graduate Diploma of Professional Accounting and selecting the correct combination of units in one of our professionally accredited courses, provides the opportunity for students to be eligible to apply for admission to the:

- CA Program of the Chartered Accountants Australia and New Zealand (CA ANZ)
- Associate membership for the CPA Program, CPA Australia
- IPA Program for the Institute of Public Accountants (IPA) and
- Exemptions may apply for the Association of Chartered Certified Accountants (ACCA).

Students should carefully note the trimesters when units are offered to ensure that all required units can be completed in the appropriate time frame.

Students who wish to enter the CA, CPA programs or exemptions to the ACCA program are advised that it is their responsibility to ensure that they take the appropriate units required for entry.

Students who have completed prior undergraduate or graduate units in accounting or other core knowledge areas are advised to have their qualifications assessed by their preferred professional organisation to ensure they complete the correct units.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

## Career opportunities

As an accounting graduate you may find employment in major international accounting firms, investment banks and virtually every area of business and government.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

*Offered to continuing students only. Students commencing in 2019, please refer to the new version of M701 Master of Business Administration course. Continuing students should discuss unit selections with their enrolment officer and refer to the 2018 handbook.*

# Master of Business Administration

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Business Administration
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1.5 years full-time or part-time equivalent
<i>CRICOS course code</i>	035037J
<i>Deakin course code</i>	M701 (version 3)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Deakin's distinctive master of business administration (MBA) course is one of Australia's premier business education programs.

For over 30 years, the Deakin MBA has been offering relevant skills, contemporary knowledge, and real experience, while developing the business leaders of tomorrow.

The Deakin MBA is internationally recognized and EPAS accredited by the European Foundation for Management Development (EFMD). The Deakin MBA is designed to meet your professional needs and to fit around your work, your family and your lifestyle. You can study on campus, in the Cloud (online) and through experiential delivery options.

Our teaching staff are experts in integrating theory into professional practice and in developing learning experiences that are current and relevant to today's workplace. By choosing the Deakin MBA you will enjoy professional academic support services including writing workshops, mentoring programs and seminars.

Over 30 years of experience delivering an MBA program means we understand your needs, the needs of your current and prospective employers, and the importance of matching one to the other. The Deakin MBA is not just about 'knowledge' and 'skills' – but also about networking, career enhancement, and professional development. Our active alumni and industry partners work with us inside and outside the classroom to ensure your learning is grounded in the everyday reality of business, and the issues it faces.

The Deakin MBA will challenge you. It will capture your imagination and enthusiasm. It will be a lifelong benefit to your career and to your professional development.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

In addition, Students must also complete a three online modules: Getting to Grips with MBA Study, Accounting Fundamentals and Basic Business Statistics, available via CloudDeakin, before they will be able to commence their units.

It is expected that students will complete each short module in 10 hours of independent study.

## Professional recognition

By choosing appropriate units within the Master of Business Administration, students may satisfy the professional recognition requirements of the Institute of Certified Management Accountants (ICMA).

## Institute of Managers and Leaders Membership

Our exciting new partnership with the Institute of Managers and Leaders (IML) means Deakin MBA students can elect to become members with Australia's most powerful leadership network for the duration of their study. Visit the IML website for more information.

## Career opportunities

Deakin's Master of Business Administration has a wide range of specialisations to help you progress your career in all areas of business from administration to business strategy. As a graduate you may find employment in areas such as financial planning, corporate governance, human resource management, marketing and a range of other areas.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](https://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M601, M501.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](https://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an understanding of fundamental business principles and concepts and integrate own business expertise to develop insights into complex, contemporary business issues and apply this to address emerging global business trends and challenges.
Communication	Demonstrate high level written, oral and interpersonal communication skills required to provide clear, well-reasoned advice to organisations and lead and influence others.
Digital literacy	Select and use digital technologies that support the research and analysis of complex business issues and enhances effective dissemination of proposals and recommendations.
Critical thinking	Apply critical thinking and analysis skills to evaluate complex data, relationships and projects in an organisational environment.
Problem solving	Apply problem solving skills and creativity to arrive at evidence-based decisions and imagine strategies and the changes required to implement recommended courses of action.
Self-management	Developed an enhanced insight into leadership style and reflect on own ability to take personal accountability and act as a confident leader.
Teamwork	Demonstrate the ability to develop networks and business relationships and leverage these to achieve collaborative and mutually beneficial outcomes.
Global citizenship	Demonstrate an understanding of the impact entrepreneurial approaches to business issues has on social, sustainability and cultural challenges in the global business environment.

## Course rules

The MBA course structure provides an integrated experience designed to reflect the foundational business knowledge required of an MBA program, career development and employability, leadership and management skills, and an integrative capstone experience.

To complete the Master of Business Administration, students must attain a total of 12 credit points, consisting of 8 credit points of core units, and 4 credit points of elective units (which may be taken as one of 21 available specialisations) plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Students also have the option of completing Masterclasses to count towards MBA electives. The masterclasses focus on new trends and issues with industry leaders in a short and engaging format.

Students must also complete three pre-term modules (0 credit point units) designed to provide a baseline foundation of study skills necessary for MBA study.

The Deakin Advantage capstone provides an integrative MBA experience in which students complete a 'live case study' as a major project which synthesises knowledge, concepts and research gained from their study program.

## Course overview

Deakin's MBA (Healthcare Management) is jointly run and managed by the Deakin Business School and the School of Medicine. It offers the best of both worlds – the core of Deakin's MBA program and a tailored set of health units designed to prepare you to manage and lead healthcare services in Australia and overseas.

We recognise that the efficient management and delivery of healthcare will be one of the most pressing challenges facing economies over the coming years. The program offers you the opportunity to tailor MBA studies to the particular issues and challenges associated with the healthcare sector. You will learn the very latest in business and management thinking – and have the opportunity to tailor it to healthcare settings.

To excel in a healthcare organisational environment or management role today, you need more than mere business knowledge. You need a comprehensive understanding of the policy context you work in, and skills to formulate and implement strategies that are necessary to operate efficiently and effectively.

To manage the growing challenges of the nation's health and provision of healthcare, you not only need to understand the health policy and funding context, but also the business end of healthcare delivery such as financing, marketing and economics.

This course offers an advanced combination of business insight and healthcare focus to succeed in this critical area of health service delivery.

## Indicative student workload

In addition to attendance at structured learning activities (including classes, seminars, residentials and on-line) students are required to undertake individual and group activities and self-driven learning. While structured activities vary between units and modes of delivery, students would normally be expected to allocate approximately 150 hours total to each unit. Some core units may require attendance at residential presentations up to 5 days duration.

## Professional recognition

In addition to the world-renowned AACSB accreditation, the course has received Australasian College of Health Service Management (ACHSM) accreditation. ACHSM is the peak body for Healthcare Executives in the Asia Pacific, their accreditation not only ensures quality and industry relevance, but also enhances graduate employability and networking opportunities. The accreditations and professional recognition indicate the industry's appreciation of the quality and relevance of the program to industry needs.

The MBA (Healthcare Management) and the School of Medicine is also associated with the Society for Health Administration Programs in Education (SHAPE), which enables ongoing quality improvement for the course content and alignment with current healthcare management trends and theories.

## Career opportunities

As healthcare service delivery becomes complex because of changing population, disease profile and medical technology; so has the requirement for qualified healthcare managers increased. There is a pressing need for trained and skilled healthcare executives and leaders in Australia and the Asia-Pacific to lead and manage healthcare service delivery into the future. The Deakin MBA (Healthcare Management) course content has been developed in consultation with industry and by academics with several years of industry experience. With the Deakin MBA (Healthcare Management) qualification in hand you are well positioned to either progress in your existing healthcare management career or embark as a healthcare manager.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin’s website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M501, M601, M701.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an understanding of fundamental business principles and concepts to develop insights into processes that drive healthcare systems and contribute to the development of new knowledge through use of appropriate research principles and methods.
Communication	Demonstrate an understanding of fundamental business principles and concepts to develop insights into processes that drive healthcare systems and contribute to the development of new knowledge through use of appropriate research principles and methods

Graduate learning outcomes	Course learning outcomes
Digital literacy	Select and use digital technologies to locate, curate and disseminate information relevant to the operation of healthcare services and support the research and analysis of complex healthcare systems issues.
Critical thinking	Apply critical thinking and analysis skills to evaluate complex data, relationships and projects that underpin the functioning of healthcare services.
Problem solving	Apply problem solving skills and creativity to arrive at evidence-based decisions and imagine strategies and the changes required to implement recommended courses of action.
Self-management	Developed an enhanced insight into leadership style and reflect on own ability to take personal accountability and act as a confident leader in the healthcare industry.
Teamwork	Demonstrate the ability to develop networks and business relationships and leverage these to achieve collaborative and mutually beneficial outcomes.
Global citizenship	Engage in professional and ethical practice that demonstrates awareness of and adaptability to, diverse social, cultural and environmental contexts in healthcare management.

## Course rules

To complete the Master of Business Administration (Healthcare management), students must attain a total of 16 credit points, consisting of 8 credit points of core units offered by the Faculty of Business and Law and 6 credit points of core units and 2 credit points of elective units offered by the Faculty of Health, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as 'subjects') are equal to 1 credit point. Students must also complete three 0 credit point units.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Course structure

### Core units

Zero credit point pre-term units:

- MBA071 MBA Pre-Term: Getting to Grips with MBA Study
- MBA072 MBA Pre-Term: Accounting Fundamentals
- MBA073 MBA Pre-Term: Basic Business Statistics

### Faculty of Business and Law core

- MAI010 Academic Integrity (0 credit points)
- MBA700 The Deakin Advantage: Leadership and Professional Development
- MBR701/MBA701 Strategy and Value Creation
- MBR702/MBA702 Financial Decision Making
- MBA703 The Economic Environment
- MBR704/MBA704 Marketing, Positioning and Consumers
- MBA705 Business Processes and Technology
- MBR706/MBA706 Leading People in Organisations
- MBA707 The Deakin Advantage: Capstone

*MBR denotes Residential version of unit.*

## Faculty of Health core

HME704	Fundamentals of Health Informatics
HME711	Health Law and Ethics
HME712	Healthcare Operations
HME713	Clinical Governance
HSH769	Comparative Health Systems
HSH725	Research Literacy for Health Practice

## Elective units

The remaining 2 credit points may be selected from the list below:

HME702	Unit description is currently unavailable ^
HME710	Health Management Practicum
HSH719	Economic Evaluation 1
HSH744	Epidemiology 1
HSH762	Resource Allocation and Priority Setting
HSH766	Economics and Health Policy Analysis

^ Denotes compulsory residential study mode at Waurn Ponds (Geelong).

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Mandatory student checks

Any unit which contains work-integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. Refer to the relevant unit guide.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

This course includes the option of other learning experiences including residential and study tour units.

## Research and research-related study

The MBA-Healthcare Management course being a professional course as opposed to a research-oriented course is unlike many Masters level course, which required extended periods of research study. However, the course recognises the importance of imparting research skills to its students. This education is delivered through the core unit HSH725 Research Literacy for Health Practice (1 credit point).

Year	2019 course information
Award granted	Master of Professional Accounting
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Offered at Burwood (Melbourne)
Cloud Campus	Yes
Duration	1.5 years full-time or part-time equivalent
CRICOS course code	073435B
Deakin course code	M720
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

Students who have commenced before T1 2019, please refer to the 2018 handbook, or the handbook archives, for the relevant course structure.

## Course overview

Deakin's Master of Professional Accounting covers engaging areas such as corporate and management accounting, commercial law, corporations law, accounting theory, economics, and finance. Open to graduates from both accounting and non-accounting background, you'll be given the opportunity to become associate members of CPA Australia or to enter the Chartered Accountants Australia and New Zealand to undertake the CA program.

The accounting profession has recently seen a trend of shifting roles from predominantly providing financial information towards wide-ranging advisory services. Graduating with a Master of Professional Accounting from Deakin opens the door to a huge variety of business careers. Today's accountants are regarded as providers of business management information – a role perfectly suited to graduates of this professional accounting course.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Completion of the appropriate selection of units within the Master of Professional Accounting grants eligibility for entry as an associate member of CPA Australia, and meets the educational requirements for entry into the CA program of the Chartered Accountants Australia and New Zealand (CA ANZ), the Institute of Public Accountants (IPA), Professional Accounting Program (PEP). Upon completion of appropriate program units, it is also possible to receive exemptions from the Association of Chartered Certified Accountants (ACCA) towards the ACCA qualification. Completion of this qualification will allow students to enter the Certified Management Accountants (CMA) study program.

Students should carefully note the trimesters when units are offered to ensure that all required units can be completed in the appropriate time frame.

Students who wish to enter the CA, CPA programs or exemptions to the ACCA program are advised that it is their responsibility to ensure that they take the appropriate units required for entry.

Students who have completed prior undergraduate or graduate units in accounting or other core knowledge areas are advised to have their qualifications assessed by their preferred professional organisation to ensure they complete the correct units.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body. Deakin makes no representations that individuals will meet those requirements.*

*Students should consult with a course adviser to identify any additional requirements for membership for each professional body, and also consult with the professional body.*

## Career opportunities

Graduates of this course would typically seek employment in areas of accounting such as financial accounting, auditing, taxation, management accounting, public sector accounting, forensic accounting or commercial law. However accountants can choose to work in a range of different environments depending on their own skills and preferences. They can choose to work in large firms, small public practices, industry, government, law firms, management consultancies, banking and financial services, not-for-profit organisations (NPOs) or educational organisations. Many also set up their own businesses.

Given the fundamental shift of accountants towards a wide-ranging advisory role, career opportunities are also becoming available in other vocations including working as financial planners, investment advisers, market analysts, tax consultants, advisers in mergers and acquisitions, in corporate recovery and insolvency, treasury banking, e-commerce or information technology.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M696, M506, M516, M616.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of current and emerging accounting concepts and practices in contemporary business.
Communication	Use advanced communication skills to justify and communicate complex accounting concepts and ideas to both accountants and non-accountants
Digital literacy	Select and apply appropriate digital technologies to find, use, manage and disseminate complex accounting and business data, information and ideas.
Critical thinking	Use a specialised set of high order cognitive and critical analysis skills expected of accounting professionals in contemporary business to evaluate, synthesise and justify complex ideas and recommendations.
Problem solving	Develop solutions to real world and ill-defined problems faced by accounting professionals in business.
Self-management	Use acquired skills to undertake own work and learning and conduct independent research.
Teamwork	Collaborate and communicate in teams to interpret decision-relevant information and develop accounting and business advice and ideas.
Global citizenship	Engage ethically, professionally and productively in a professional accounting and business context in light of changing global perspectives.

## Course rules

To complete the Master of Professional Accounting, students must attain a total of 12 credit points, consisting of 12 credit points of core units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as 'subjects') are equal to 1 credit point.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MAA703	Accounting for Management 1,2,4
MAA716	Financial Accounting 1,2
MAA725	Advanced Accounting Principles and Practice 1,2
MAA753	Professional Research and Analysis
MAA763	Governance and Fraud
MLC707	Business Law 1,2,4
MPA701	Accounting 1,2
MPF753	Finance 1,2,4
MLC703	Principles of Income Tax Law 2,3,4
MPE781	Economics for Managers 1,2
MPM701/MPM701A	Business Process Management 1,2,^
MAA705	Corporate Auditing 2,3,4

1 Required by CPA Australia for Associate (foundation level) Membership.

2 Required by the Chartered Accountants Australia and New Zealand for entry to the CA Program.

3 For candidates who have completed an accredited degree in Australia, this unit may be taken as part of the CPA program. Other students must complete the unit before becoming an Associate Member of CPA Australia

4 For candidates who would like to obtain exemptions to the Association of Chartered Certified Accountants (ACCA) program.

^ MPM701A is a Start Anytime unit.

### Work experience

This course does not require students to complete compulsory work integrated learning units.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### Research and research-related study

This course includes 1cp equivalent research-related study [MAA753 Professional Research and Analysis] in addition to associated learning embedded across a number of units where student achievement is demonstrated in specific assessment tasks.

# Master of Information Systems

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Information Systems

<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	<p>Depending on your professional experience and previous qualifications, the Master of Information Systems is typically 1, 1.5 or 2 years duration.</p> <ul style="list-style-type: none"> <li>• 1 year full time (2 years part time) – 8 credit points</li> <li>• 1.5 years full time (3 years part time) – 12 credit points</li> <li>• 2 years full time (4 years part time) – 16 credit points</li> </ul> <p>Deakin courses can also be studied part time over a longer period.</p>
<i>CRICOS course code</i>	052316E
<i>Deakin course code</i>	M722
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

The Master of Information Systems has been developed in response to the rapid growth in the use of information systems and eBusiness applications by businesses and governments internationally.

The mass adoption of social media, the advances of new technologies, and the accumulation of large amounts of data has made information central to many aspects of work and life.

Digital information has revolutionised the way we do business. Its capture, strategic use and associated technology in the business environment, is the discipline of information systems.

The course provides specialist skills in business-oriented principles and practices of information systems and eBusiness. It focuses on the strategic use of information in a business and policy context, supported by a sound technical understanding and capability in specific areas of information systems, particularly information security, supply chain management, and project management.

The course will give you an understanding of the principles and practices of stakeholder analysis, identification of business needs, problems and opportunities, analysis, negotiation and specification of requirements for any solution that may involve technology-inspired change.

You'll learn quantitative reasoning skills so that you can review business performance to find problems, areas of opportunities, and trends in data using business analytics. You'll learn data-driven, evidence-based approaches to business decision making and business performance analysis, and you'll get an understanding of business metrics.

Your project management skills will be developed to ensure that you are able to implement best practice relationship building, communication and resourcing to support your project aims.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Information Systems is accredited by the Australian Computer Society (ACS). Completion of this course grants eligibility for entry as a Professional member of the Australian Computer Society (ACS).

## Career opportunities

This course teaches students the skills required to manage the impact of technologies in organisations, understand the role of technology in managing knowledge and information, and recognise the role of modern information systems in society and business.

Graduates can move into careers as data analysts, business analysts, systems analysts, e-Business specialists, security analysts, and information systems project leaders.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M622, M522.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate specialised knowledge and research skills needed to lead and manage the resources and processes associated with information systems within an organisation or social setting.
Communication	Effectively transmit models, frameworks and management theory with consideration to impacts and outcomes to both specialists and non-specialists.
Digital literacy	Expertly apply specialised information application skills relative to information systems settings.
Critical thinking	Apply critical thinking, analytical research skills relative to complex information systems settings.
Problem solving	Formulate and recommend expert solutions based on organisational needs and a critical evaluation of alternatives.

Graduate learning outcomes	Course learning outcomes
Self-management	Demonstrate autonomy, adaptability and responsibility, self-reflect and critique own performance and identify and plan future development as a professional.
Teamwork	Work collaboratively in teams to produce and share specialised and integrated solutions to complex information systems problems.
Global citizenship	Demonstrate a high standard of ethical, legal, and responsible behaviour in the development and deployment of information systems to meet organisational needs.

## Course rules

The Master of Information Systems is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 11 credit points of core units, 5 credit points of elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit) and MIS070 Academic Induction for Postgraduate Information Systems (0 credit points). Electives may be selected to complete any 4 credit point postgraduate specialisation offered by the University, subject to eligibility.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete a capstone unit that requires requiring them to integrate the skills learnt over their course of study and produce an applied piece of research with reference to prevailing literature.

## Specialisations

Refer to the details of each specialisation for availability.

- Accounting
- Business Analytics
- Finance
- Financial Planning
- Human Resource Management
- Marketing

Award granted	Master of Laws
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Offered at Burwood (Melbourne)
Cloud Campus	Yes
Duration	1 year full-time or part-time equivalent
CRICOS course code	042690K
Deakin course code	M726
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*Please note: Not all elective units are available in each trimester. Depending on the commencing study period, there may be limited elective choices.*

## Course overview

Deakin's Master of Laws has a focus on international commercial law and corporate regulation. The course will equip you with fundamental disciplinary knowledge on important areas of the Australian and international legal system and recent professional practice developments.

The course covers new developments in major areas of human activity (health, financial services, corporate governance), and increased regulation in traditional areas (dispute resolution, human rights, tax) to equip you with a high level of knowledge for an advanced legal career.

The eight credit point course can be completed in one year (full time). On completion you will have developed advanced research, analytical, evaluative and communication skills to prepare you for leadership roles in a variety of global careers.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars or online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a fundamental, advanced and integrated understanding of a complex body of legal knowledge relevant to Australian and international legal jurisdictions.
Communication	Develop high level communication skills in different forms relevant to different legal and non-legal audiences.
Digital literacy	Use technologies to identify, locate, and evaluate information for complex problem solving scenarios as well as communicating legal solutions.
Critical thinking	Exercise critical thinking capacities in defining complex legal problems and in examining major legal policy issues.
Problem solving	Develop sophisticated problem solving capacities by developing intellectual and practical skills needed to justify and interpret theoretical propositions, legal methodologies, conclusions and professional decisions.
Self-management	Develop high level capacities to undertake major independent research and policy-related work in law.
Teamwork	Develop high level capacities in communicating and working effectively with others in collaborative exercises requiring sophisticated legal thinking and problem solving.
Global citizenship	Develop a sophisticated awareness of, and a high level capacity to, apply legal knowledge in different environments and global contexts.

## Course rules

The Master of Laws requires the completion of 4 credit points of core units and 4 elective units chosen from a list, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

Students will undertake a practice-based research methods and design unit as preparation for a significant independent research project that culminates in completion of a major research thesis unit.

## Course structure

### Core units

- MAI010 Academic Integrity (0 credit points)
- MLM704 Foundations of Law
- MLM705 Research Methodology
- MLM707 Research Thesis <sup>^</sup>

<sup>^</sup> 2 credit points

## Elective units

The remaining 4 credit points may be selected from the below list:

MLC703	Principles of Income Tax Law
MLC707	Business Law
MLC709	Business Taxation Law and Policy
MLC713	Corporate Insolvency Law and Policy
MLJ728	Contemporary Legal Issues
MLJ729	Contemporary International Legal Challenges (Intensive)
MLM706	Corporate Governance
MLM715	Health Law
MLM716	Alternative Dispute Resolution: Principles and Practice
MLM717	Financial Services Regulation
MLM718	Venture Law Clinic
MLM719	Human Rights Law and Policy
MLM727	Superannuation Law and Policy
MLM728	Civil and Commercial Law Clinic
MLM785	Public International Law
MLM788	International Financial Crime

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

Masters Degrees include research-related study in MLM705 Research Methodology (1 cp or equivalent) and independent research with MLM707 Research Thesis (1cp or equivalent) minimum. Components of research and research-related study may be embedded across a number of units where student achievement is demonstrated in specific assessment tasks.

<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*Note: Trimester 3 study is available part-time only.*

## Course overview

The Deakin Juris Doctor (JD) combines its commercial focus with the development of practical skills essential to contemporary legal practice. Designed for non-law graduates, this intellectually-stimulating course is offered fully online after an optional Induction program held in Melbourne, in February.

The Deakin JD goes beyond the teaching of legal knowledge and practical skills, to the development of a broader understanding of the policy informing the law, focusing on current policy issues and developing skills in the use of legal theory and legal research methods.

Your assignments might include problem-based written advice, an oral bail application, an assignment focusing on the implementation of procedural rules, preparation of a memorandum of advice, oral court submissions and a file management project. Group assignment work is also a feature of some units to ensure you develop the important skills necessary to work as part of a team.

The Deakin JD meets the academic requirements for admission to legal practice in Victoria. A person wishing to practice as a lawyer is also required to complete a 12-month traineeship program or six-month legal practice course and demonstrate that they are a 'fit and proper person'.

The Deakin JD course is designed to produce graduates who can become first-class commercial law practitioners by providing comprehensive training in each of the major areas of legal practice and systematically embedding research, theory and policy considerations throughout the curriculum. A distinctive feature of the course is its orientation towards commercial law.

Leading, practising lawyers help shape our courses, so everything you learn is relevant to the industry and preparing you for a career in law.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practical activities and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

A Juris Doctor is a qualification that offers great career opportunities. In addition to opportunities within law firms, which range from small rural and regional general legal practices through to large national or international practices, law graduates may enter other industries such as business (e.g. as a corporate lawyer, company administrator or business manager); government service (e.g. as a lawyer with departments or authorities as diverse as the Attorney-Generals Department, the Office of Parliamentary Counsel, the Director of Public Prosecutions, and the Australian Securities and Investments Commission); industrial relations, public administration; academia; or bodies that recommend law reform (e.g. as a law reform commissioner).

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Develop an advanced and integrated understanding of a complex body of knowledge, including:</p> <ul style="list-style-type: none"> <li>• The fundamental areas of legal knowledge, the Australian legal system and underlying principles and concepts, including international and comparative contexts;</li> <li>• The broader contexts within which legal issues arise;</li> <li>• The principles and values of justice and of ethical practice in lawyers' roles;</li> <li>• extended understanding of contemporary developments in law (and law reform);</li> <li>• extended understanding of contemporary developments in professional practice.</li> </ul>
Communication	<p>Develop high level communication skills, including:</p> <ul style="list-style-type: none"> <li>• Communication of findings both orally and in writing using plain English and legal terminology through formal legal channels and contemporary Internet-based forms of communication;</li> <li>• Knowledge of different genres of legal writing;</li> <li>• Knowledge of different genres of oral communication with culturally diverse audiences;</li> <li>• Effective and persuasive communication depending on needs and backgrounds of legal and non-legal audiences;</li> <li>• Ability to engage constructively with needs of audiences and choose right communication approach.</li> </ul>

Graduate learning outcomes	Course learning outcomes
Digital literacy	<p>Use technologies to identify, locate, evaluate information for complex problem solving scenarios as well as communicating legal solutions, including:</p> <ul style="list-style-type: none"> <li>Identifying, researching, evaluating and synthesising relevant factual, legal and policy issues, effectively using technologies where appropriate;</li> <li>Finding, using and disseminating information using technologies;</li> <li>Using digital sources to organize and present information in authentic and complex legal situations.</li> </ul>
Critical thinking	<p>Exercise critical thinking capacities to:</p> <ul style="list-style-type: none"> <li>Identify and articulate complex legal issues;</li> <li>Apply legal reasoning and research to generate appropriate jurisprudential and practical responses to legal issues;</li> <li>Engage in critical analysis and make reasoned and appropriate choices amongst alternatives;</li> <li>Demonstrate sophisticated cognitive and creative skills in approaching legal issues and generating appropriate responses</li> </ul>
Problem solving	<p>Develop sophisticated problem solving capacities by developing intellectual and practical skills needed to justify and interpret theoretical propositions, legal methodologies, conclusions and professional decisions through the ability to:</p> <ul style="list-style-type: none"> <li>Identify the need for research;</li> <li>Identify factual, legal and policy issues;</li> <li>Research factual, legal and policy issues;</li> <li>Evaluate factual, legal and policy issues;</li> <li>Synthesise factual, legal and policy issues.</li> </ul>
Self-management	<p>Develop high level capacities to:</p> <ul style="list-style-type: none"> <li>Learn and work with a high level of autonomy, accountability and professionalism particularly in regard to undertaking independent research;</li> <li>Reflect on and assess own capabilities and performance, and make use of feedback as appropriate, to professional development;</li> <li>Commit to and lead lifelong learning and continuing professional development.</li> </ul>
Teamwork	<p>Develop high level capacities to:</p> <ul style="list-style-type: none"> <li>Collaborate effectively with others from a diversity of backgrounds;</li> <li>Lead diverse teams and resolve interpersonal and team-based;</li> <li>negotiate and work effectively through team disputes and problems with team dynamics.</li> </ul>

Graduate learning outcomes	Course learning outcomes
Global citizenship	<p>Develop a sophisticated awareness of, and a high level capacity to, apply legal knowledge in different environments and global contexts, including:</p> <ul style="list-style-type: none"> <li>• An advanced and integrated understanding of approaches to ethical decision making;</li> <li>• An ability to recognise and reflect upon, and a developing ability to respond to, ethical issues likely to arise in professional contexts;</li> <li>• An ability to recognise and reflect upon the professional responsibilities of lawyers in promoting justice and in service to the community;</li> <li>• A developing ability to exercise mature professional judgment in the context of cultural and community diversity.</li> </ul>

## Course rules

To complete the Juris Doctor, students must attain a total of 24 credit points, including 17 core units and 7 elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Each unit (think of units as 'subjects') is equal to 1 credit point.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the ability to apply those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Course structure

### Core units

Optional (but highly recommended) on-campus Induction program, which is live-streamed and recorded, and held for two days in the T1 induction and for one day in the T3 induction, plus online pre-recorded presentations

plus:

MAI010	Academic Integrity (0 credit points)
MLJ701	Legal Method and Statutory Interpretation
MLJ702	Contract Law and Policy
MLJ703	Criminal Law and Policy
MLJ704	Torts and Policy
MLJ705	Commercial Law and Policy
MLJ706	Law and Policy of Misleading Conduct and Product Liability
MLJ707	Criminal Procedure and Policy
MLJ708	Civil Procedure, Alternative Dispute Resolution and Policy
MLJ709	Constitutional Law and Policy
MLJ710	Administrative Law and Policy
MLJ711	Property Law and Policy
MLJ713	Evidence Law and Policy
MLJ715	Corporate Law and Policy
MLJ716	Land Law and Policy
MLJ717	Trusts and Equitable Remedies
MLJ720	Legal Practice, Ethics and Policy
MLJ721	Advanced Legal Professional Practice

## Elective units

7 credit points of elective units can be chosen from:

MLC709	Business Taxation Law and Policy
MLC710	Sport and the Law
MLC713	Corporate Insolvency Law and Policy
MLJ712	Family Law and Policy
MLJ714	Workplace Law and Policy
MLJ718	Competition Law and Policy
MLJ719	Intellectual Property and Policy
MLJ722	International Commercial Law and Policy
MLJ723	Taxation Law and Policy
MLJ724	Mergers and Acquisitions
MLJ725	Employment Law Clinic
MLJ726	Family Law Clinic
MLJ727	Criminal Law Clinic
MLJ728	Contemporary Legal Issues
MLJ730	Migration and Refugee Law and Policy
MLM706	Corporate Governance
MLM715	Health Law
MLM716	Alternative Dispute Resolution: Principles and Practice
MLM717	Financial Services Regulation
MLM718	Venture Law Clinic
MLM719	Human Rights Law and Policy
MLM727	Superannuation Law and Policy
MLM728	Civil and Commercial Law Clinic
MLM785	Public International Law
MWL702	Business Practicum

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Additional course information

JD students are invited to attend an optional (but highly recommended) campus-based Juris Doctor Induction Program which will be live-streamed and recorded and includes video presentations. Induction for students commencing in trimester 1 is a two day program at the Burwood campus. Induction for students commencing in trimester 3 (part-time students only) is a one day program at the Burwood campus.

### 2019 Induction Program dates

- Trimester 1: February 2019 (Date TBC)
- Trimester 3: October 2019 (Date TC)

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Business Administration (International)

<i>Year</i>	2019 course information

<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*This course is unavailable for intake.*

## Course overview

Deakin's Master of Legal Studies degree is designed to enhance professional capabilities, employability and career progression in a range of relevant professional disciplines including international relations, human resources, public health, and humanitarian assistance. In each of these fields it is recognised that the advanced study of law can provide a stronger underpinning to capabilities directly acquired in the co-discipline.

A master degree from the study of relevant law gives students a competitive and reputational advantage in their chosen professional career field. The Master of Legal Studies, in addition to its focused streams/ disciplines, also provides a Research specialisation, to accommodate a PhD pathway.

This course is suitable for both those who are legally qualified and wish to practice in a chosen professional specialisation, along with those who have undertaken prior studies in one of the non-law specialisations who wish to advance themselves through further legal studies directly applicable to that area.

Graduates will have a competitive advantage in the contemporary professional marketplace targeting the recruitment of multi-skilled professionals.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, or online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a fundamental, advanced and integrated understanding of a complex body of legal knowledge relevant to Australian and international legal jurisdictions and which enhances associated professional disciplinary studies.
Communication	Develop high level communication skills in different forms relevant to different legal and non-legal audiences and in associated professional studies.
Digital literacy	Use technologies to identify, locate, and evaluate information for complex problem solving scenarios as well as communicating legal and associated professional studies' solutions.
Critical thinking	Exercise critical thinking capacities in defining complex legal and professional studies problems and in examining major legal and professional studies policy issues.
Problem solving	Develop sophisticated problem solving capacities by developing intellectual and practical skills needed to justify and interpret theoretical propositions, methodologies, conclusions and professional decisions in legal and associated professional studies
Self-management	Develop high level capacities to undertake major independent research and policy-related work in law and associated professional studies.
Teamwork	Develop high level capacities in communicating and working effectively with others in collaborative exercises requiring sophisticated thinking and problem solving in legal and associated professional studies contexts.
Global citizenship	Develop a sophisticated awareness of, and a high level capacity to, apply knowledge in different environments and global legal and professional studies contexts.

## Course rules

To complete the Master of Legal Studies, students must attain a total of 16 credit points, consisting of 4 credit points of core units, 4 credit points from a specified stream and an 8 credit point specialisation, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

Students must complete a stream and specialisation within the same discipline area.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that requires them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Specialisations

Refer to the details of each stream and specialisation for campus availability.

- Human Resources
- Humanitarian Assistance
- International Relations
- Public Health
- Research

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MLM704	Foundations of Law
MLM785	Public International Law
MLC707	Business Law
MLM705	Research Methodology

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Details of specialisations

**Human Resources – unit set code – ST-M73701 – Stream; SP-M73701 – Specialisation**  
*Cloud (online)*

### Professional recognition

This specialisation is accredited by the Australian Human Resources Institute (AHRI).

### Stream units

MLM719	Human Rights Law and Policy
MLM728	Civil and Commercial Law Clinic

Plus two credit points from:

MLJ714	Workplace Law and Policy
MLM706	Corporate Governance
MLM716	Alternative Dispute Resolution: Principles and Practice

### Specialisation units

MMH701	Human Resource Strategy
MMH702	Strategic Staffing
MMH707	Organisational Development and Change
MMH709	Employment Relations for Organisational Effectiveness
MMH710	Rights and Responsibilities in Human Resource Management
MMH733	Ethics for Managers

Plus 2 credit points from:

MMH703	Developing People and Organisations
MMH704	Performance Management and Reward

*Burwood (Melbourne), Cloud (online)*

**Stream units**

- MLJ709 Constitutional Law and Policy
- MLM719 Human Rights Law and Policy
- MLM728 Civil and Commercial Law Clinic
- MLM716 Alternative Dispute Resolution: Principles and Practice

**Specialisation units**

- AIR707 The United Nations and International Organisation
- AIR726 Human Rights in World Politics
- AIR728 Global Political Economy
- AIR742 International Relations Theory
- AIR747 Contemporary International Politics
- AIR748 Security and Strategy

Plus 2 credit points from:

- AIR717 International Conflict Analysis
- AIR720 Transnational Activism and Policy
- AIR729 Human Security in Global Politics
- AIR753 Regionalism in International Politics

**Humanitarian Assistance – unit set code – ST-M73705 – Stream; SP-M73705 – Specialisation**

*Cloud (online)*

**Stream units**

- MLJ709 Constitutional Law and Policy
- MLM716 Alternative Dispute Resolution: Principles and Practice
- MLM719 Human Rights Law and Policy
- MLM728 Civil and Commercial Law Clinic

**Specialisation units**

- AHA721 Dynamics and Dilemmas of the Humanitarian Sector
- AHA722 Applied Humanitarian Assistance: From Theory to Practice
- AHA723 Fundamentals of Humanitarian Management
- AHA724 Disaster Risk Reduction and Management in Humanitarian Contexts
- AHA725 Project and Financial Management in Humanitarian Contexts
- AHL701 The Humanitarian World

Plus two credit points of postgraduate elective units chosen from the School of Humanities and Social Sciences and/or the School of Health and Social Sciences.

## **Public Health – unit set code – ST-M73703 – Stream; SP-M73703 – Specialisation**

*Burwood (Melbourne), Cloud (online)*

### **Stream units**

- MLJ709 Constitutional Law and Policy
- MLM715 Health Law
- MLM716 Alternative Dispute Resolution: Principles and Practice
- MLM719 Human Rights Law and Policy

### **Specialisations units**

- HSH701 Principles and Practice of Public Health
- HSH702 Contemporary Health Issues and Policies
- HSH703 Health Promotion
- HSH717 Health Economics 1
- HSH725 Research Literacy for Health Practice
- HSH744 Epidemiology 1
- HSH746 Biostatistics 1
- HSH769 Comparative Health Systems

## **Research – unit set code – ST-M73704 – Streams; SP-M73704 – Specialisations**

*Burwood (Melbourne), Cloud (online)*

### **Streams units**

- MLJ709 Constitutional Law and Policy

Plus 3 credit points selected from any stream offered under this course.

### **Specialisations units**

- MPP704 Research Project 4 (4 cp)

Plus 4 units from any specialisation offered under this course.

## **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## **Research and research-related study**

This course includes research-related study (1 cp or equivalent) and independent research MLM705 Research Methodology (1cp or equivalent) minimum. Components of research and research-related study may be embedded across a number of units where student achievement is demonstrated in specific assessment tasks.

# Master of Leadership

Award granted	Master of Leadership

<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Enter a leadership role in the sport industry by studying a course ranked in the world's top 10.

Deakin is a leader in sport management education according to the prestigious SportBusiness International (SBI) journal. Deakin's Master of Business (Sport Management) is the only Australian program to make the top 25 in SBI's rankings.

Importantly, graduates of the Master of Business (Sport Management) rank in the top 5 for average salaries three years after graduation, compared with their peers working in sport business around the globe.

Australia has one of the strongest sporting sectors in the world. Underpinning this multi-billion dollar industry are the business professionals who provide direction and leadership to sporting organisations across the country. You can study at Deakin's Melbourne Burwood Campus, or online through Deakin's Cloud Campus.

This course develops business and leadership skills to effectively manage sport organisations. Whether it's at the elite, semi-elite or recreational levels, sport management at Deakin prepares you to deliver on all strategic dimensions of the industry – in areas such as marketing and promotions, governance and management, facilities and events, as well as participation development.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M518.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Develop a comprehensive understanding of the elements of management that are unique to the sport business through analysis and application of theory from business and allied disciplines in order to provide effective management and leadership in sport organisation.
Communication	Develop advanced written, oral and visual communication skills around complex concepts for diverse stakeholders involved in the sport industry including organisations in government and corporate sectors, and those involved in delivery of sport at community through to elite settings.
Digital literacy	Select and use appropriate digital technologies to manage and disseminate relevant information to stakeholders in the sport industry.
Critical thinking	Demonstrate a specialised set of high order cognitive and technical skills including critical analysis and problem solving skills for managing in the sport industry.
Problem solving	Identify and address issues, create high quality solutions towards commercial and social improvements and implement efficient strategic and operational outcomes in the sport industry.
Self management	Demonstrate advanced skills to work independently and take responsibility for continuing professional development.
Teamwork	Work with others to contribute to collaborative outcomes and be able to take on roles towards demonstration of leadership within the sport industry.
Global citizenship	Engage as a professional in the sport industry with the skills that are applicable to a variety of contexts (professional, amateur) and issues (global, social, ethical, cultural) in the sport industry.

## Course rules

The Master of Business (Sport Management) is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 10 credit points of core units and 6 credit points of elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as ‘subjects’) are equal to 1 credit point. Electives may be selected from any postgraduate units offered by the University, subject to eligibility.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MMS711	Introduction to the Sport Industry
MMS714	Sport Organisation Behaviour
MLC710	Sport and the Law
MMS712	Sport Marketing
MMS715	Sport Promotions and Public Relations
MMS716	Sport Organisation Theory
MMS736	Strategic Management
MMS774	Facility and Event Management
MPA702	Financial Interpretation
MPT781/MPE781	Economics for Managers <sup>^</sup>

<sup>^</sup> MPT code denotes Study Tour version of the unit

### Elective units

Plus 6 credit points of general postgraduate elective units

Recommended Sport Management elective units:

MMS701	Athlete Management
MMS713	Sport Policy and Development
MMS773	Sport Broadcasting

## Work experience

This course provides students the opportunity to complete one or more elective work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

This course includes the option of other learning experiences including residential and study tour units.

## Research and research-related study

Research-related learning tasks are embedded across units where student achievement is demonstrated in specific assessment tasks.

# Master of Accounting and Law

<i>Award granted</i>	Master of Accounting and Law

<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

The accounting profession has recently seen a fundamental shift from a role that was seen as providing financial information and number crunching towards a multi-disciplinary advisory role. Similarly, many law firms increasingly favour graduates who display accounting and financial acumen.

Deakin's Master of Professional Accounting and Law (MPAL) course provides an advanced, integrated, and coherent set of multidisciplinary studies in a range of business and law disciplines, encompassing areas such as accounting, finance, commercial law and business taxation. Graduates will possess a skill-set covering accounting and related business law subjects, including superannuation, business taxation and financial services regulation.

The course offers graduates a pathway to gain entry to professional accounting bodies such as the CPA Australia, the Institute of Public Accountants, Chartered Accountants Australia and New Zealand and exemptions from the Association of Chartered Certified Accountants (ACCA).

Graduates with a Master of Professional Accounting and Law will have multi-disciplinary skills with the ability to solve complex business issues in multiple markets.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Completion of the Master of Professional Accounting and Law grants eligibility for entry as an associate member of CPA Australia, and meets the educational requirements for entry into the CA program of the Chartered Accountants Australia and New Zealand (CA ANZ), the Institute of Public Accountants (IPA). Upon completion of appropriate program units, it is also possible to receive exemptions from the Association of Chartered Certified Accountants (ACCA) towards the ACCA qualification. Completion of this qualification will allow students to enter the Certified Management Accountants (CMA) study program.

Students should carefully note the trimesters when units are offered to ensure that all required units can be completed in the appropriate time frame.

Students who wish to enter the CA, CPA programs or exemptions to the ACCA program are advised that it is their responsibility to ensure that they take the appropriate units required for entry.

Students who have completed prior undergraduate or graduate units in accounting or other core knowledge areas are advised to have their qualifications assessed by their preferred professional organisation to ensure they complete the correct units.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body. Deakin makes no representations that individuals will meet those requirements.*

*Students should consult with a course adviser to identify any additional requirements for membership for each professional body, and also consult with the professional body.*

## Career opportunities

Graduates of this course would typically seek employment in areas of accounting such as financial accounting, auditing, taxation, management accounting, public sector accounting, forensic accounting or commercial law. However accountants can choose to work in a range of different environments depending on their own skills and preferences. They can choose to work in large firms, small public practices, industry, government, law firms, management consultancies, banking and financial services, not-for-profit organisations (NPOs) or educational organisations. Many also set up their own businesses.

Given the fundamental shift of accountants towards a wide-ranging advisory role, career opportunities are also becoming available in other vocations including working as financial planners, investment advisers, market analysts, tax consultants, advisers in mergers and acquisitions, in corporate recovery and insolvency, treasury banking, e-commerce or information technology.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Clinical unit (MLM718) requires compulsory attendance.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M649, M549.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate an integrated understanding of current and emerging accounting and related legal concepts and practices
Communication	Demonstrate skills to justify and analyse complex accounting and legal problems and present to both accountants and lawyers
Digital literacy	Apply appropriate software and internet technologies to analyse financial and regulatory information
Critical thinking	Apply in-depth analytical skills to evaluate financial and regulatory information expected of business professionals within a legal framework
Problem solving	Develop solutions to real world problems faced by accounting and legal professionals in business environment
Self-management	Use acquired skills to organise own learning including the conduct of independent research and justification of decision choices
Teamwork	Collaborate and communicate in groups to interpret decision-relevant information and develop suitable business recommendations
Global citizenship	Engage ethically, professionally and productively in a professional accounting and business context in light of changing global perspectives.

## Course rules

The Master of Professional Accounting and Law is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 13 credit points of core units and 3 credit points of elective units. Most units (think of units as ‘subjects’) are equal to 1 credit point.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

All students must complete the online induction on foundations of law within the first trimester of their enrolment. Upon successful completion of the induction, student services are automatically notified and students receive an acknowledgement of their completion of induction.

- 1 Required by CPA Australia for Associate (foundation level) Membership.
- 2 Required by the Chartered Accountants Australia and New Zealand for entry to the CA Program.
- 3 For candidates who have completed an accredited degree in Australia, this unit may be taken as part of the CPA program. Other students must complete the unit before becoming an Associate Member of CPA Australia.
- 4 For candidates who would like to obtain exemptions to the ACCA program.

### Elective units

Select 1 credit point from the Accounting elective list and select 2 credit points of units from the Law elective list:

#### Accounting electives:

- MAA744 Strategic Management Accounting  
 MAA763 Governance and Fraud  
 MAA767 Integrated Reporting and Value Creation

#### Law electives:

- MLC713 Corporate Insolvency Law and Policy  
 MLM727 Superannuation Law and Policy  
 MLC709 Business Taxation Law and Policy  
 MLM717 Financial Services Regulation

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

Research-related learning tasks are embedded across units where student achievement is demonstrated in specific assessment tasks.

# Master of International Finance

Year	2019 course information
Award granted	Master of International Finance
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Offered at Burwood (Melbourne)
Cloud Campus	Yes
Duration	<p>Depending on your professional experience and previous qualifications, the Master International Finance is typically 1, 1.5 or 2 years duration.</p> <ul style="list-style-type: none"> <li>• 1 year full time (2 years part time) – 8 credit points</li> <li>• 1.5 years full time (3 years part time) – 12 credit points</li> <li>• 2 years full time (4 years part time) – 16 credit points</li> </ul> <p>Deakin courses can also be studied part time over a longer period.</p>
CRICOS course code	054577A
Deakin course code	M750
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*Please note: The availability of units in Trimester 3 may be limited.*

## Course overview

Finance professionals will be especially interested in Deakin's Master of International Finance as the coursework and research components have been designed to enhance professional practice in a range of financial domains.

The course will give you an understanding of the modern financial techniques underpinning investment, financing and risk management decisions of multinational corporations. You'll cover international financial markets, international corporate governance, alternative investments, derivative securities and international portfolio management.

You'll develop analytical skills for making key financial management decisions, including time-value-of money and risk-return analysis, plus you'll learn how to apply basic mathematics to solve real-world financial decision problems. Through practice, you'll become adept to various digital technologies used to process complex financial data, information and ideas.

This course aims to provide a high-level education in finance issues and research methodologies. Depending on your unit choice, you may be eligible for membership to Finance and Treasury Association, Financial Planning Association and the Financial Services Institute of Australasia.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

By completing the Master of International Finance, you may gain membership or eligibility to apply for membership at the Finance and Treasury Association (FTA) and the Financial Services Institute of Australasia (FINSIA), two leading professional bodies for Finance professionals.

## Career opportunities

A wide range of career paths in Australia and internationally are open to finance graduates, ranging from those who depend on people skills (such as client account managers) to those who depend on technical skills (such as security analysts or dealers). Typically, finance graduates work in stockbroking firms, financial institutions, manufacturing businesses and in government, among others

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M530, M630.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Develop an advanced and integrated understanding of finance theory, financial models and demonstrate how this specialised knowledge can be applied in the field of international financial markets to optimise financial outcomes
Communication	Convey complex financial information and recommendations in writing and orally for both financial specialists and non-financial audiences
Digital literacy	Apply appropriate digital technologies to find, use, manage and disseminate complex financial data, information and ideas.
Critical thinking	Conduct research to critically analyse a range of complex finance related information to make informed investing and financing decisions for corporates, the investing community and business at large.

Graduate learning outcomes	Course learning outcomes
Problem solving	Apply a range of techniques, including research and analytical skills, from finance, accounting and business to create solutions to real-world and complex finance issues.
Self-management	Demonstrate the ability to work and learn independently and show personal responsibility.
Teamwork	Foster a constructive environment through ongoing academic collaboration
Global citizenship	Reflect on different international, ethical and regulatory perspectives in addressing issues faced by finance professionals

## Course rules

The Master of International Finance is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 11 credit points of core units and 5 credit points of elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as ‘subjects’) are equal to 1 credit point.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Specialisations

Refer to the details of each specialisation for availability.

- Advanced Finance\*
- Finance Research Project\*
- Financial Planning\*
- Risk Management\*

\* Offered to continuing students only.

## Course structure

### Core units

<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	056889B
<i>Deakin course code</i>	M751
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Learn how to manage and lead an organisation in an international context with one of Australia's premier business education programs.

This internationally-focused version of the MBA provides a business internship experience, and offers opportunities to participate in overseas study tours where academic study is integrated with visits to professional bodies in host countries. This enables you to develop a real appreciation of key aspects of business in a global environment.

For 30 years, the Deakin MBA has offered relevant skills, contemporary knowledge and real experience, while developing the business leaders of tomorrow.

Teamwork, sustainability, globalisation and social and regulatory responsibility are themes that run through the entire MBA program. The course has a strong focus on people, profit, and the environment, which means you'll graduate with an understanding of the importance of ethical behaviour and sustainable decision-making.

Research, scholarship and industry engagement heavily inform the content of the course. This enables the course to always stay up to date with current and future business trends.

The Deakin MBA program is renowned for its learning opportunities based on experience and observation. Innovative teaching techniques include our intensive residential units where you can complete a unit in one week.

Deakin's MBA(I) currently holds a 5-star rating from the Graduate Management Association of Australia (GMAA).

Deakin's online MBA is ranked number 15 in the world – and the best in Victoria for the third consecutive year – in the international university rankings published by the prestigious QS Quacquarelli Symonds. Both campus and online modes of study incorporate Deakin's flexible learning model, using electronic conferencing, group-based project work and interaction, high quality course materials, overseas study programs and intensive residential schools.

Our MBA (International) is designed to be a stimulating study experience. You will be able to develop the analytical, creative, and interpersonal skills that are key to a successful career in business.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Deakin's Master of Business Administration (International) has a range of specialisations to help you progress your career in all areas of business from administration to business strategy. As a graduate you may find employment in areas such as financial planning, corporate governance, human resource management, marketing and a range of other areas.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M531, M631.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of a contemporary body of knowledge and apply research skills and theories to the evaluation of complex business issues in a global context.
Communication	Demonstrate advanced communication skills and intercultural understanding in a diverse range of business and management contexts.
Digital literacy	Select and use digital technologies to find, organise, analyse and disseminate complex business ideas.
Critical thinking	Apply critical analysis skills to evaluate complex ideas in business and international contexts.

Graduate learning outcomes	Course learning outcomes
Problem solving	Apply problem solving skills to conceptualise, construct and recommend solutions for complex business issues facing local and international organisations.
Self-management	Work and learn independently and take responsibility for personal and professional actions.
Teamwork	Demonstrate advanced team work skills in diverse organisational contexts.
Global citizenship	Analyse and interpret the impact of ethics, culture and internationalisation on contemporary business.

## Course rules

To complete the Master of Business Administration (International), students must attain a total of 16 credit points, consisting of 12 credit points of core units and 4 credit points of elective units (which may include a specialisation), plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as 'subjects') are equal to 1 credit point.

Electives may be selected from:

- an MBA(I) specialisation (and may form an MBA(I) specialisation, or
- the specified list of electives, or
- other postgraduate units subject to prior written approval of the Course Director.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

**Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

**Other learning experiences**

This course includes the option of other learning experiences including residential and study tour units.

**Research and research-related study**

Students complete at least 2 credit points (or equivalent) of research and research training across their degree. This business course provides students learning opportunities to develop a variety of research skills designed to enable them to:

- source information and retrieve it;
- develop a problem statement, research questions and hypotheses;
- evaluate prevailing industry and academic literature from market analysts, economists and other industry experts;
- utilise industry based research methods;
- demonstrate presentation and academic and business report writing skills.

Students are required to undertake authentic and applied 'research-orientated' tasks as part of several core units:

Examples of task and assessment include (but are not limited to):

- information retrieval and literature searches;
- literature review on a nominated topic;
- demonstrated skills in data management;
- quantitative and qualitative research methods;
- presenting research and critical analysis;
- business and academic writing.

Students can, if they wish, extend their research skills and application by choosing elective units that form a research specialisation.

# Master of Commerce

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Commerce
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>

<i>CRICOS course code</i>	027129E
<i>Deakin course code</i>	M755
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

This course is designed for graduates of any field of study as a first qualification in business.

Deakin's Master of Commerce is a discipline-based coursework degree with six core units: Accounting, Finance, Economics for Managers, Business Process Management, Business Communication for Managers, and Business Strategy and Analysis. You'll also complete units, which will lead to the completion of a specialisation of your choice.

The course is also intended to give you a solid introduction to the theoretical principles of finance and the practical requirements of financial management within for-profit corporate organisations.

Learning through classes, conferences, group work and debates among students, graduates will possess highly-developed computer and technology skills for employees in today's commerce and related industries.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

By choosing appropriate units within the Master of Commerce, you may satisfy the professional recognition requirements for entry into alternate professional bodies including CPA Australia, Chartered Accountants Australia and New Zealand (CA ANZ), the Institute of Public Accountants (IPA), the Association of Chartered Certified Accountants (ACCA) or the Institute of Certified Management Accountants (ICMA).

## Career opportunities

The specialisations in commerce studies lead to careers in virtually every area of business and government in Australia and internationally. Broad career paths include becoming a professional accountant, IT and systems professional, economist, financial planner, human resources manager, social and economic policy developer, international trade officer and marketing assistant/manager. As this is a very broad course there are further possibilities in other professions especially if taken with further study.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M506, M516, M616, M696.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Synthesise a broad base of critical commerce knowledge with specialised discipline knowledge and apply this in contemporary business contexts, drawing from this to explore advanced concepts through conducting independent research on a chosen commerce-related issue.
Communication	Demonstrate business communication techniques to convey complex commerce concepts and proposals to both specialists and non-specialists.
Digital literacy	Apply appropriate digital technologies to find, use, manage and disseminate complex commerce knowledge and ideas.
Critical thinking	Critically analyse a range of complex business related information to make informed business decisions in regard to investment, ethical, economical, and business management issues, and to provide informed recommendations and courses of action.
Problem solving	Conceptualise, construct and recommend solutions to real world and ill-defined problems faced by decision-makers in a business environment.

Graduate learning outcomes	Course learning outcomes
Self-management	Demonstrate initiative and independence in learning and research in both a broad and a specialised field of commerce.
Teamwork	Work and learn with others from different disciplines and backgrounds.
Global citizenship	Interpret and reflect on the impact of ethics, culture and internationalization on contemporary business issues.

## Course rules

The Master of Commerce is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 8 credit points of core units, at least one specialisation of 4 credit points and 4 credit points of electives, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

Most units (think of units as ‘subjects’) are equal to 1 credit point. Students may choose to complete more than one specialisation.

Electives may be selected from:

- a Master of Commerce specialisation, or
- other postgraduate units offered by the University subject to eligibility and approved by the Course Director.

## Specialisations

## **Recognition of Prior Learning**

Recognition of Prior Learning into the Master of Commerce may be granted to students who have successfully completed appropriate postgraduate studies. There are negotiated Recognition of Prior Learning arrangements in place for CPA members.

## **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## **Study overseas and earn a dual degree**

The Deakin Business School offers the opportunity to study a dual degree with an overseas partner university in Sweden. You'll learn at world-class business schools and have the chance to explore another country and culture. Visit Deakin's website to learn more about the Master of Commerce/Master in International Strategic Management.

## **Other learning experiences**

This course includes the option of other learning experiences including residential and study tour units.

## **Research and research-related study**

Students undertake the equivalent of a credit point of research training and a further credit point of research-based project(s). Components of research and research related-study are embedded across other units of this course and student achievement is demonstrated in specific assessment tasks.

## Course overview

Become a business analytics professional capable of driving business growth through analytics-based solutions.

Deakin's business analytics program has been developed in partnership with industry needs. These are drawn from course partners including IBM, Microsoft, SAS, Altis Consulting, Deloitte, Ernst & Young, PBT Group and PwC.

This course introduces you to a range of internationally-recognised business intelligence and analytics tools and has a very strong practical focus. You'll learn how decision-making problems in business can be solved using modern modelling and solution techniques.

Big data concepts and issues are integrated across the curriculum and you'll have access to state-of-the-art business analytics software tools, such as IBM Cognos, IBM SPSS Modeler and IBM Watson, SAS Enterprise Miner, Microsoft Excel and Tableau.

You'll also have direct access to analytics certification programs offered by IBM, Microsoft and SAS.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Business Analytics is accredited by the Australian Computer Society (ACS).

Completion of this course grants eligibility for entry as a Professional member of the Australian Computer Society (ACS).

## Career opportunities

As a Graduate of the Master of Business Analytics you will have developed a broad set of business analytic skills highly sought after in every industry sector, particularly within professional services firms and government.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M661.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate a specialised and integrated understanding of contemporary body of knowledge of business analytics to research, design and implement projects with creativity and initiative.
Communication	Interpret specialised knowledge and effectively communicate complex business analytics findings to both specialists and non-specialists.
Digital literacy	Expertise in using business analytics technologies to independently source information, analyse complex business data and disseminate findings
Critical thinking	Evaluate complex business information using specialised and advanced critical and analytical thinking and judgment.
Problem solving	Use research skills and analytics techniques to interpret data, analyse business environments, and develop advanced solutions for authentic (real world and ill-defined) problems.
Self-management	Demonstrate autonomy, adaptability and responsibility, self-reflect and critique own performance and identify and plan future development as a business analytics professional.

Graduate learning outcomes	Course learning outcomes
Teamwork	Collaborate constructively in teams to produce and share specialised and integrated analytic solutions to complex business problems.
Global citizenship	Engage ethically and productively in a business analytics professional context with diverse communities and cultures in a global context.

## Course rules

The Master of Business Analytics is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 12 credit points of core units and 4 credit points of elective units which may be selected from any postgraduate units offered by the University, subject to eligibility, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

Most units (think of units as ‘subjects’) are equal to 1 credit point. Students are encouraged to use the electives units to gain depth or sector expertise.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete a capstone unit that requires requiring them to integrate the skills learnt over their course of study and produce an applied piece of research with reference to prevailing literature.

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MIS770/MIS770A	Foundation Skills in Data Analysis ^
MIS782	Value of Information
MIS771	Descriptive Analytics and Visualisation
MIS772	Predictive Analytics
MIS775	Decision Modelling for Business Analytics
MIS779	Decision Analytics in Practice
MIS781	Business Intelligence
MIS784	Marketing Analytics
SIT772	Database and Information Retrieval
SIT718	Real World Analytics
SIT720	Machine Learning
SIT742	Modern Data Science

^ MIS770A is a Start Anytime unit.

### Elective units

Plus 4 credit points of postgraduate units selected from the Faculty of Business and Law and from other faculties within the University; which may include the units listed below:

MIS793	Business Analytics Project *
MPP704	Research Project 4

\* This unit is worth 2 credit points

Students who have completed a minimum of 6 core units within the Master of Business Analytics (including MIS770 and MIS771) with a minimum WAM of 65% will be eligible to enrol in MPP704 Research Project 4 (which includes a thesis).

Achieving at least a second class honours upper division or grade of at least 70% in this unit would allow the student to apply for admission to our PhD program. For details refer to entry pathways to research degrees.

## **Work experience**

This course provides students the opportunity to complete one or more elective work integrated learning units.

## **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## **Other learning experiences**

This course includes the option of other learning experiences including residential and study tour units.

## **Research and research-related study**

Research-related learning tasks are embedded across units where student achievement is demonstrated in specific assessment tasks.

## Course overview

The Master of Financial Planning is a new course 12 credit point Master's course designed to meet the requirements of the new financial planning standards body – the Financial Adviser Standards and Ethics Authority (FASEA).

The course emphasises the professional responsibilities of the financial planner, both in an ethical and compliance sense, incorporating Ethics for Financial Services, Financial Behaviour and Decision Making and Financial Services Regulation.

This professionally-oriented course is designed to enhance professional capabilities, employability and career progression in the financial planning professional discipline. You will learn to apply advanced and integrated knowledge, devise recommendations, develop literacy and technical skills in digital technologies, sustain opinions and solve problems that indicate a professional approach to the practice of financial planning.

The Master's course includes research-related study in addition to associated learning embedded across a number of units. Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. Students will study a capstone unit that requires them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature within specific assessment tasks.

Students will have the opportunity to study an elective unit.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M669, M569.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Apply an advanced and integrated knowledge about the financial planning development process for clients requiring financial planning advice of varying degrees of complexity and contexts.
Communication	Demonstrate advanced interpersonal and networking skills to communicate persuasively with clients to gather and interpret personal data and transmit knowledge to clients through the preparation and presentation of financial plans including financial goal achievement and risk minimisation.
Digital literacy	Select and apply appropriate digital technology to find, use, manage and persuasively disseminate complex wealth creation and risk minimisation knowledge and ideas to both clients and professional colleagues.
Critical thinking	Systematically and critically analyse, synthesise, evaluate and transform a range of complex information on wealth creation and risk minimisation to create personalised and contextualised financial plans for clients.
Problem solving	With creativity and autonomy, systematically develop strategies for wealth creation and risk minimisation for individuals by critically evaluating methods of inquiry, action planning and/or problem solving thereby generating innovative and contextualised solutions for financial goal achievement.

Graduate learning outcomes	Course learning outcomes
Self-management	Demonstrate advanced skills to work and learn independently, for taking responsibility for continuing professional development, personal actions and to critically reflect and analyse own personal motivations, aspirations and actions.
Teamwork	Lead and be accountable for the strategic management of group or team learning and outputs, demonstrating initiative in professional contexts and the ability to actively facilitate a positive team environment and to be open to working with and learning from others from different disciplines and backgrounds
Global citizenship	Engage ethically, professionally and productively in work, professional and the global contexts including with diverse communities and cultures, in a manner reflective of a critical understanding of ethical principles, a systematic knowledge of professional codes of conduct and an understanding of various worldviews and the complexity of elements important to members of other cultures.

## Course rules

The Master of Financial Planning is typically a 12 credit point course but this is dependent on your entry point. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money, but may be limited by the FASEA education standards.

To complete the Master of Financial Planning, students must attain a total of 12 credit points consisting of 11 credit points of core units and 1 credit points of elective units chosen from a specified list, plus completion of MAI010 Academic Integrity and MAA071 Pre-Term: Getting to Grips with Postgraduate Study (0-credit-point compulsory units). Most units (think of units as ‘subjects’) are equal to 1 credit point.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

Students are required to meet the University’s academic progress and conduct requirements.

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MAA071	Pre-Term: Getting to Grips with Postgraduate Study (0 credit points)
MAA700	Estate Planning and Risk Management Strategies
MAA719	Superannuation and Retirement Planning
MAA728	Financial Behaviour and Decision Making
MAA745	Financial Planning and Economic Fundamentals
MAA753	Professional Research and Analysis
MAA769/MAI769	Ethics for Financial Services (Intensive)
MAF707	Investments and Portfolio Management
MLC703	Principles of Income Tax Law
MLC707	Business Law
MLM717	Financial Services Regulation

**From Trimester 3 2019:**

MAI010	Academic Integrity (0 credit points)
MAA071	Pre-Term: Getting to Grips with Postgraduate Study (0 credit points)
MAA700	Estate Planning and Risk Management Strategies
MAA719	Superannuation and Retirement Planning
MAA728/MAI728	Financial Behaviour and Decision Making (Intensive)
MAA745	Financial Planning and Economic Fundamentals

## Course overview

This professionally-oriented course is specifically designed to meet the education needs of the financial planning industry.

Over the past two decades, superannuation has become an industry of great economic significance to Australia, with its size now greater than the nation's annual Gross Domestic Product, the market capitalisation of the ASX and total cash deposits held by Australian banks.

The Master of Financial Planning is ideal for both those aspiring to join the financial planning industry and those currently employed in the industry. This degree seeks to build your financial planning abilities, skills and knowledge.

You will collect, analyse and synthesise financial planning information and use your skills to prepare financial planning solutions for clients. The course emphasises the professional responsibilities of the financial planner both in an ethical and in a compliance sense.

The course will give you an overall understanding of investment management in relation to different asset classes, plus the skills to construct, manage and evaluate portfolios using the key principles of modern portfolio theory. You'll learn how to apply, analyse and relate the key principles of modern portfolio theory and asset pricing models using different portfolios of financial assets.

You'll get an introduction to superannuation and retirement planning with a focus on the major trends and features of the industry and the framework in which the industry operates. The course will look at issues relating to superannuation contributions, different types of superannuation funds, the rules relating to the taxation and accessing of benefits, a consideration of alternative retirement income stream products and strategies designed to enhance superannuation and retirement income benefits.

The Master of Financial Planning is a course approved by the new financial planning standards body – the Financial Adviser Standards and Ethics Authority (FASEA). Graduates who complete the Master of Financial Planning will satisfy the education standards prescribed by FASEA to be able to provide financial advice in Australia and be eligible for entry into the certification programs of the professional financial planning associations – the CERTIFIED FINANCIAL PLANNER® (CFP®) Certification Program offered by the Financial Planning Association of Australia (FPA) and the Fellow Chartered Financial Practitioner (FChFP) designation offered by the Association of Financial Advisers (AFA).

Successful completion of the Master of Financial Planning will also provide advanced standing for three of the five CFP® Certification units and up to two of the four FChFP Certification units.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Financial Planning (MFP) will be nominated as a financial planning course to be approved by the new financial planning standards body – the Financial Adviser Standards and Ethics Authority (FASEA). Graduates who complete a FASEA-Approved degree will satisfy the education standards prescribed by FASEA to be able to provide financial advice in Australia, subject to meeting other registration requirements (including completion of a Professional Year for Provisional Relevant Providers and passing a National Adviser Exam).

It is intended that all advisers who complete the MFP will gain entry and advanced standing into the certification programs of the financial planning professional associations. Graduates will be eligible for entry into the certification programs of the professional financial planning associations – the CERTIFIED FINANCIAL PLANNER® (CFP®) Certification Program offered by the Financial Planning Association of Australia (FPA) and will also be eligible for advanced standing for three of the five CFP® Certification units.

Graduates will be eligible for the Fellow Chartered Financial Practitioner (FChFP) designation offered by the Association of Financial Advisers (AFA) and up to two of the four FChFP Certification units.

The MFP also allows students to meet the education requirements of the Tax Agent Services Act (TASA) following completion of Australian Tax Law and Commercial Law units approved by the Tax Practitioners Board (TPB).

If students successfully complete MAA747 Administration of Trusts and Estates as their elective unit, they may meet the Australian educational requirements of the Society of Trust and Estate Practitioners (STEP).

*Note: Students should consult with the Financial Planning Association or the Association of Financial Advisers and their websites for confirmation of professional recognition and to ensure that they are not required to undertake additional units.*

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Apply an advanced and integrated knowledge about the financial planning development process for clients requiring financial planning advice of varying degrees of complexity and contexts.
Communication	Demonstrate advanced interpersonal and networking skills to communicate persuasively with clients to gather and interpret personal data and transmit knowledge to clients through the preparation and presentation of financial plans including financial goal achievement and risk minimisation.
Digital literacy	Select and apply appropriate digital technology to find, use, manage and persuasively disseminate complex wealth creation and risk minimisation knowledge and ideas to both clients and professional colleagues.
Critical thinking	Systematically and critically analyse, synthesise, evaluate and transform a range of complex information on wealth creation and risk minimisation to create personalised and contextualised financial plans for clients.
Problem solving	With creativity and autonomy, systematically develop strategies for wealth creation and risk minimisation for individuals by critically evaluating methods of inquiry, action planning and/or problem solving thereby generating innovative and contextualised solutions for financial goal achievement.
Self-management	Demonstrate advanced skills to work and learn independently, for taking responsibility for continuing professional development, personal actions and to critically reflect and analyse own personal motivations, aspirations and actions.
Teamwork	Lead and be accountable for the strategic management of group or team learning and outputs, demonstrating initiative in professional contexts and the ability to actively facilitate a positive team environment and to be open to working with and learning from others from different disciplines and backgrounds
Global citizenship	Engage ethically, professionally and productively in work, professional and the global contexts including with diverse communities and cultures, in a manner reflective of a critical understanding of ethical principles, a systematic knowledge of professional codes of conduct and an understanding of various worldviews and the complexity of elements important to members of other cultures.

## Course rules

The Master of Financial Planning is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points you study 9 credit points of core units and 7 credit points of elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

Most units (think of units as ‘subjects’) are equal to 1 credit point.

4 credit points of electives may be selected from a list of 9 units and 3 credit points of electives may be selected from any units in the Master of Commerce and/or the Master of International Finance.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Course structure

### Elective units

Plus 3 credit points of elective units from other postgraduate units offered by the Faculty of Business and Law in the Master of Commerce and/or Master of International Finance.

*Note: Students should consult with the Financial Planning Association or their website for professional recognition. Students seeking professional recognition may be required to undertake additional units.*

## Work experience

This course provides students the opportunity to complete one or more elective work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

This course includes the option of other learning experiences including study tour units.

MPT732 Marketing Management (Tour)

## Research and research-related study

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature within specific assessment tasks.

Students may wish to undertake MPP703 Research Project 2 as one of their electives. This unit – worth 2 credit points – is designed to enable students to undertake independent research, under the guidance of a supervisor knowledgeable in the research area, and to prepare a project report in a thesis format (15,000 words) that contributes to the stock of knowledge in the research area. The supervisor must be a member of academic staff at Deakin University.

# Master of International Accounting

<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

To enable students to complete units in the required sequence, trimester 3 is a compulsory study period for this course.

New title from T3 2019: *Master of International Accounting – ACCA*

## Course overview

This flexible course lets you take your accounting career in a wide range of directions.

Deakin's Master of International Accounting (MIA) provides graduates of any discipline with the opportunity to undertake studies towards gaining membership of the Association of Chartered Certified Accountants (ACCA). An ACCA accounting qualification is highly regarded by employers in many countries.

As part of the MIA course, you will study subjects such as introductory accounting, financial reporting, management accounting, commercial and taxation law, corporate auditing, accounting theory, information systems for business, governance, finance, and business economics.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

On successful completion of the MIA course, you will not only gain exemption from all nine 'fundamental' level ACCA papers, but also have the necessary knowledge to undertake the Association of Chartered Certified Accountants (ACCA) six 'professional' level examinations. It is important to note that each MIA unit that is aligned with ACCA's professional examinations (MAA726, MAA795, MAF755, MAA764, MAA765), will be delivered in six-hour segments each teaching week, totalling 66 contact hours over the trimester. At the end of Trimesters 2 and 3, those who wish to sit the ACCA exam will be required to attend intensive master classes over one week for each of the six units. These master classes are valuable and designed to help you succeed in your ACCA examinations.

In addition to the Association of Chartered Certified Accountants (ACCA) qualification, completion of the appropriate selection of units within the MIA also grants eligibility for entry into alternate professional bodies including an associate member of CPA Australia, and meets the educational requirements for entry into the CA program of Chartered Accountants Australia and New Zealand (CA ANZ) and the Institute of Public Accountants (IPA).

Completion of this qualification will allow students to enter the Certified Management Accountants (CMA) study program.

## Career opportunities

Graduates of the Master of International Accounting course would typically seek employment in areas of accounting such as financial accounting, auditing, taxation, management accounting, public sector accounting, forensic accounting, or business advisory services. The course will provide graduates with the opportunity to work in a wide range of different environments, depending on their own skills and preferences. Accountants can choose to work in large, medium or small public practice firms, industry and commerce, government and public sector organisations, management consultancies, banking and financial services, not-for-profit organisations (NPOs) or educational organisations. Many also set up their own businesses.

Given the fundamental shift of accountants towards a wide-ranging advisory role, career opportunities are also becoming available in other vocations including working as financial planners, investment advisers, market analysts, tax consultants, advisers in mergers and acquisitions, in corporate recovery and insolvency, treasury banking, e-commerce or information technology.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Students are required to complete units in Trimester 3.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M580, M680.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of current and emerging accounting concepts and practices within the broad context of contemporary business environment.
Communication	Demonstrate advanced skills to justify and communicate complex financial and non-financial information to diverse stakeholders within and outside corporate bodies.
Digital literacy	Apply relevant and state-of-art digital technologies to analyse financial and non-financial information.
Critical thinking	Apply in-depth analytical skills to evaluate financial and non-financial information expected of accounting professionals in the contemporary business environment.
Problem solving	Develop solutions to real world problems faced by accounting and other professionals in business environment.
Self-management	Use acquired skills to organise own learning including the conduct of independent research.
Teamwork	Contribute and learn by collaborating in teams in order to interpret and communicate accounting and related information
Global citizenship	Engage ethically and professionally in accounting and business context in light of dynamic global perspectives.

## Course rules

The Master of International Accounting is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 14 credit points of core units and 2 credit points of elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

Most units (think of units as ‘subjects’) are equal to 1 credit point.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MAA703	Accounting for Management 1, 2, 4
MAA705	Corporate Auditing 2, 3, 4
MAA717	Introductory Accounting 1, 2, 4
MAA718	Financial Accounting I 1, 2, 4
MAA720	Financial Accounting II 1, 2, 4
MAA726	Strategic Business Reporting 5
MAA744	Strategic Management Accounting
MAA753	Professional Research and Analysis
MAA795	Strategic Business Leader 1, 2, 5
MLC703	Principles of Income Tax Law 2, 3, 4
MLC707	Business Law 1, 2, 4
MPT781/MPE781	Economics for Managers 1, 2, *
MPF753	Finance 1, 2, 4

### Elective units

Plus 2 credit points from:

MAA764	Advanced Performance Management 5
MAA765	Advanced Audit and Assurance 5
MAF755	Advanced Financial Management 5

\* MPT code denotes study tour version of the unit

- 1 Required by CPA Australia for Associate (foundation level) Membership.
- 2 Required by Chartered Accountants in Australia and New Zealand (CA ANZ) for entry to the CA Program.
- 3 For candidates who have completed an accredited degree in Australia, this unit may be taken as part of the CPA program. Other students must complete the unit before becoming an Associate Member of CPA Australia.
- 4 Required for exemptions to the ACCA fundamentals level program.
- 5 Unit covering required content to prepare students for the equivalent ACCA Professional level program exam.

Students who wish to obtain membership of CPA Australia, CA ANZ, IPA or ACCA, or obtain any applicable exemptions, are advised that it is their responsibility to ensure that they take the appropriate units required.

*Please note: The eligibility of students for membership of any of the accounting accrediting bodies is subject to meeting the requirements of that body and that Deakin makes no representations that individuals will meet those requirements.*

## Work experience

This course provides students the opportunity to complete one or more elective work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

MAA753 – Professional Research and Analysis is a 1 cp independent research unit in the course. The following units in combination include research-related study equivalent to at least 1 cp: MAA720 – Accounting Theory, MAA744 – Strategic Management Accounting, and MAA795 – Strategic Business Leader.

<i>Deakin course code</i>	M782
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*Please note: Students commencing in Trimester 3 can only undertake the elective unit.*

## Course overview

The course meets the needs of current human resource practitioners wanting to extend and expand their skills and knowledge with a formal qualification and it also meets the needs of senior management whose duties require them to take on responsibilities in human resources development and management.

Accredited by the Australian Human Resources Institute, this is a specialised course designed to provide enhance qualifications for graduates in business, government and industry.

Human resource management is no longer regarded as the sole responsibility of a special department. An understanding of human resource management is now generally a requirement of managers throughout organisations.

This course offers specialist units in employment relations, human resource strategy, development, and specialist HR functions, together with an elective study option from a key business discipline; marketing, management, accounting, economics, finance and information systems.

This human resource management course will help enhance your existing employment experience in the field of human resources, enabling you to progress to managerial-level positions in human resources.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include online classes and seminars and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Human Resource Management is accredited by the Australian Human Resources Institute (AHRI). Graduates may be eligible for entry into the AHRI Practising Certification (APC) Program.

## Career opportunities

As a graduate of the Master of Human Resource Management you will have developed skills and knowledge to enhance your existing employment experience in the field of human resources, enabling you to progress to managerial-level positions in human resources and line management specialisations.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here:

[deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M515, M615.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Integrate advanced understanding of a contemporary body of knowledge in human resource management to operate as a skilled HR professional in business.
Communication	Select and apply advanced appropriate communication skills within the context of human resource management.
Digital literacy	Select and apply appropriate digital technologies to identify and disseminate complex information, concepts and theories in human resource management.
Critical thinking	Review, critically analyse, consolidate and synthesize human resource related knowledge to respond to specialised and authentic contexts encountered by human resource professionals.
Problem solving	Relate and develop advanced problem solving skills necessary to conceptualise and solve human resource issues in the workplace.
Self-management	Employ a range of advanced skills in undertaking independent learning in human resource management.
Teamwork	Apply team working skills in addressing human resource issues in the contemporary workplace.
Global citizenship	Evaluate emerging global human resource issues as they effect organisations.

## Course rules

The Master of Human Resource Management is typically 8 or 12 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 12 credit points, you study 11 credit points of core units and a one credit point elective unit, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as ‘subjects’) are equal to 1 credit point.

The elective may be selected from:

- any Business and Law postgraduate unit, or
- any postgraduate unit offered by the University subject to eligibility and approved by the Course Director.

Students will undertake a one-credit point research training unit and one credit point research-based project unit.

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MMH701	Human Resource Strategy
MMH702	Strategic Staffing
MMH703	Developing People and Organisations
MMH704	Performance Management and Reward
MMH709	Employment Relations for Organisational Effectiveness
MMH710	Rights and Responsibilities in Human Resource Management
MMH753	Human Resource Management in the Global Context
MPK701	Research Design and Analysis
MMH707	Organisational Development and Change
MPP701	Research Project 1A
MPP702	Research Project 1B

### Elective units

Plus one elective from:

MIS714	Human Resource Analytics
MWL702	Business Practicum
MWL704	Work Based Learning

Or any other postgraduate unit offered by the Faculty of Business and Law or as approved by the Course Director.

## Work experience

This course provides students the opportunity to complete one or more elective work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Research and research-related study

In this course students are required to complete a research related study unit – MPK701 Research Design and Analysis (1 Credit Point). Students are also required to undertake an independent research project constituting 2 credit points (MPP701 – Research Project 1a and Research Project 1b).

<i>Deakin course code</i>	M785
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

Please note that this course is not offered in Trimester 3.

## Course overview

The Australia Council for the Arts estimates that cultural activity contributes \$50 billion to Australia's GDP. In addition to its impressive size, the arts and cultural sector is notable for its ever evolving profile, creating a demand for responsive and highly trained art managers. These managers are taking on leadership roles in small-medium arts organisations, cultural venues, festivals, heritage sites, publishing houses and a range of performing and visual arts programs.

This Masters program develops students' skills in innovation and leadership through practical experience in the arts and cultural sector. Under the direction of teachers with extensive industry experience, it prepares graduates who will lead the arts and cultural sector into the future.

This course provides you with a tailored business education emphasising management, marketing and finance skills. These skill-sets are vital for the success of arts and cultural organisations as they face common challenges such as organisational sustainability, enhancing cultural vitality and building relationships with audiences.

You'll be taught by staff with wide-reaching, practical experience in management and leadership across a range of arts and cultural sectors. You'll also have the opportunity to engage with a range of industry representatives, be exposed to the work of cutting-edge thinkers, and integrate your work and learning.

Our course is structured within the framework of a business education and enhanced through a series of industry-specific projects ideal for those working in the arts and cultural sectors. It includes an internship/work project capstone unit that ensures students are able to apply their theoretical knowledge through 'hands on' industry practice.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

This program prepares graduates for leadership roles across the range of cultural organisations, including: performing arts, visual arts, festivals, community events, facilities, publishing houses, music venues, screen industries, cultural heritage and museums.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Alternative exits

M519.3, M665.2

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Assess a broad range of specialised management approaches and their application to arts organisations, while contributing to new discipline knowledge and extending current arts management practice.
Communication	Determine appropriate communication strategies and techniques in the practice of arts management.
Digital literacy	Apply the use of digital technologies in relation to arts the practice of arts management.
Critical thinking	Appraise and synthesise information in order to understand and apply theories of arts management and extend current practice.
Problem solving	Determine solutions to a diverse range of current and emerging arts management challenges and issues.
Self-management	Personalise reflections on arts management practice and plan professional careers.
Teamwork	Participate and collaborate with arts management practitioners.
Global citizenship	Incorporate arts management theory and practice from a range of cultural and international contexts and address the requirements of ethical practice.

## Course rules

The Master of Business (Arts and Cultural Management) is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 10 credit points of core units and 6 credit points of elective units, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as ‘subjects’) are equal to 1 credit point.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Course structure

### Core units

MAI010 Academic Integrity (0 credit points)  
 MMK792 Arts Marketing  
 MMM707 Creative Industries  
 MMM790 Arts Management  
 MMM793 Managing Cultural Projects and Events  
 MMM796 Managing Arts in Community Settings  
 MMM799 Arts Fundraising and Sponsorship  
 MPA702 Financial Interpretation  
 MPT712/MPM712 Managing Innovation #  
 MPM722 Human Resource Management

and one unit from:

MWL702 Business Practicum  
 MWL704 Work Based Learning

# MPT code denotes study tour version of unit

### Elective units

Plus 6 credit points of elective units:

Students select 3 units from list of electives relating to generic arts and cultural management and operational issues:

MLM706 Corporate Governance  
 MMK737 Online Marketing  
 MPK732 Marketing Management  
 MPM703 Business Strategy and Analysis

Students select 3 units from list of electives relating to arts and cultural management advanced issues:

AIM704 Heritage, Development and Tourism in the Asia-Pacific Region  
 AIP773 Governance and Accountability

 MWL702 Business Practicum \*

\* if not taken as a core unit

^ MPR code denotes residential version of the unit

## Work experience

This course provides students the opportunity to complete one or more elective work integrated learning units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

This course includes the option of other learning experiences including residential and study tour units.

## Research and research-related study

Principles of academic and research integrity are embedded within the core units undertaken for this course.

# Master of Marketing

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Marketing
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	<p>Depending on your professional experience and previous qualifications, the Master of Marketing is typically 1, 1.5 or 2 years duration:</p> <ul style="list-style-type: none"> <li>• 1 year full time (2 years part time) – 8 credit points</li> <li>• 1.5 year full time (3 years part time) – 12 credit points</li> <li>• 2 year full time (4 years part time) – 16 credit points</li> </ul> <p>Deakin courses can also be studied part time over a longer period.</p>
<i>CRICOS course code</i>	092727K
<i>Deakin course code</i>	M788
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

The Master of Marketing is for those looking to invest in a specialist, professional course that builds on their current experience and skill sets. If you want to climb the next rung of your career, this course will give you excellent grounding in crucial areas that affect the performance of modern markets.

Diversify your knowledge and skills by studying cutting-edge concepts and frameworks that underpin modern marketing. You will learn to appreciate the business and entrepreneurial acumen that is needed to grow a business. You will hone your research, strategy and communication skills, this expertise will help you succeed in the upper echelons of business. You can elect to study two postgraduate units from any course offered by the Deakin Faculty of Business and Law (subject to unit entry requirements). These units will help to broaden your knowledge of business and management. We suggest units in leadership, process management or financial interpretation. More importantly, you can undertake specialist streams and choose between Customer and Digital Marketing Analytics, Public Relations and Image Marketing, or Research. These are areas currently driving change in markets and industry. These specialisations will give you a deeper understanding-of and abilities-in in these specialist marketing areas. The Research stream can serve as a pathway to a PhD.

You will have exciting opportunities for internships, international study tours and can work on real projects with our industry partners. Senior and Chief Marketers feature regularly in our classes as guest speakers.

Having an in-depth understanding of marketing concepts and techniques is valuable in industry, government and community. You will complete this course with high quality skills, aptitude and the qualification to grow into a thriving marketing career.

You may gain entry to the Master of Marketing program through successful completion of the Graduate Diploma of Marketing.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Marketing is accredited by the Australian Marketing Institute (AMI).

## Career opportunities

Graduates who are employed in management roles can expect to find move to more senior managerial positions; these senior posts will require you to have market savvy, market management and entrepreneurial capabilities. Examples of these jobs in areas like general marketing (e.g., marketing manager, product manager, and client manager), branding (brand manager, new market manager), research (Market Intelligence Officer), digital media, marketing communications management, and customer experience manager. The Master of Marketing helps you launch your career into senior management. I urge you to use your time in the course to increase the quality of your academic and industry networks, this will build your visibility and value as a business leader.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate specialised and experience-based knowledge of advanced concepts and theories relating to marketing and business management.
Communication	Apply and demonstrate advanced communication skills in marketing and business contexts.
Digital literacy	Obtain, manage, interpret and disseminate appropriate marketing information using digital technologies.
Critical thinking	Analyse and apply critical analysis skills to the (business) marketing environment.
Problem solving	Apply a range of problem solving techniques to create solutions to real-world and complex marketing applications.
Self-management	Demonstrate advanced skills to work and learn independently, and take responsibility for personal and professional development.

Graduate learning outcomes	Course learning outcomes
Teamwork	Collaborate with people from different backgrounds and contribute to the management of business and marketing teams.
Global citizenship	Engage as a marketing professional in a manner reflective of an understanding of ethical principles, professional codes of conduct and cultural variations.

## Course rules

The Master of Marketing is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points you study:

- 10 credit points of core marketing units
- 2 credit points of elective units selected from any Business and Law postgraduate units
- one specialisation of 4 credit points; plus
- completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

Most units (think of units as ‘subjects’) are equal to 1 credit point.

Students will undertake a one-credit point research training unit and one credit point research-based project unit.

## Specialisations

Refer to the details of each specialisation for availability.

- Customer and Digital Marketing Analytics
- Public Relations and Image Marketing
- Research Project

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MMK737	Online Marketing
MMK738	Integrated Marketing Communication
MMK751	Services Marketing
MMK739	Strategic Brand Management
MPK701	Research Design and Analysis
MPK713	Consumer Behaviour
MPK733	Applied Strategic Marketing
MPM705	Retailing
MPT732/MPK732	Marketing Management #
MPT736/MPK736	International Marketing #

# MPT code denotes study tour version of the unit

### Elective units

<i>Deakin course code</i>	M794 (version 2)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Complete a combined Masters while achieving a recognised professional accounting and/or finance qualification.

Specialising in Accounting and Finance, this course meets the needs of employers and professional bodies operating in this area.

Aside from core units in areas such as portfolio management, income tax law and corporate finance, you can choose electives relevant to your career and personal goals. For example, you can learn more about international finance, modelling techniques for finance or work integrated learning (WIL).

Studying this course will help make you eligible for entry as an associate member of CPA Australia among other professional recognition.

## Indicative student workload

As a student in the Faculty of Business and Law, you can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Completion of the appropriate selection of units within the Master of Professional Accounting and Finance can:

- grant eligibility for entry as an associate member of CPA Australia;
- meet the educational requirements for entry into the CA program of the Chartered Accountants Australia and New Zealand (CAANZ);
- meet the educational requirements for the Institute of Public Accountants
- allow students to enter the Certified Management Accountants (CMA) study program.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Pathways

Students who have completed prior undergraduate or graduate units in accounting or other core knowledge areas are advised to have their qualifications assessed by their preferred professional organisation to ensure they complete the correct units.

## Alternative exits

M720, M630, M530, M696, M506.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of current and emerging accounting and finance concepts and practices in contemporary business.
Communication	Use advanced communication skills to justify and communicate complex accounting and finance concepts and ideas to accountants, finance professionals and other business related occupations
Digital literacy	Be able to apply appropriate digital technologies to find, use, manage and disseminate complex financial and accounting data, information and ideas.
Critical thinking	Use a specialised set of high order cognitive and critical analysis skills expected of accounting and finance professionals in contemporary business to evaluate, synthesise and justify complex ideas and recommendations.
Problem solving	Develop solutions to real world and ill-defined problems faced by accounting and finance professionals in business.
Self-management	Use acquired skills to undertake own work and learning and conduct independent research.

Graduate learning outcomes	Course learning outcomes
Teamwork	Develop teamwork skills and facilitate a positive team environment by working with and learning from others on accounting and international finance issues.
Global citizenship	Engage ethically, professionally and productively in a professional accounting, international finance and business context in light of changing global perspectives.

## Course rules

The Master of Professional Accounting and Finance is typically 8, 12 or 16 credit points. The exact number of credit points you study depends on how much credit you receive as recognition of prior learning (RPL) – your professional experience and previous qualifications – which can save you time and money.

For students undertaking 16 credit points, you study 15 credit points of core units and a 1 credit point elective unit, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit). Most units (think of units as ‘subjects’) are equal to 1 credit point.

Students are introduced to research tools and techniques in core units of the course where they learn analytic skills and the practical application of those skills in professional contexts. They must also complete advanced level units and a capstone unit that require them to integrate the skills learnt over their course of study and produce applied pieces of research with reference to prevailing literature.

## Course structure

### Core units

MAI010	Academic Integrity (0 credit points)
MPA701	Accounting <sup>1, 2</sup>
MAA703	Accounting for Management <sup>1, 2, 4</sup>
MAA705	Corporate Auditing <sup>2, 3, 4</sup>
MAA716	Financial Accounting <sup>1, 2</sup>
MAA725	Advanced Accounting Principles and Practice <sup>1, 2, 4</sup>
MAA763	Governance and Fraud
MAF702	Financial Markets
MAF703	Applied Corporate Finance
MAF707	Investments and Portfolio Management
MAF759	Analytical Methods
MLC703	Principles of Income Tax Law <sup>1, 2, 3, 4</sup>
MLC707	Business Law <sup>1, 2, 4</sup>
MPF753	Finance <sup>1, 2, 4</sup>
MPT781/MPE781	Economics for Managers <sup>1, 2</sup>
MPM701/MPM701A	Business Process Management <sup>1, 2, *</sup>

\* MPM701A is a Start Anytime unit

1 Required by CPA Australia for Associate (foundation level) Membership.

2 Required by the Chartered Accountants Australia and New Zealand for entry to the CA Program.

3 Candidates have the option of either completing MAA705 and/or MLC703 OR in the CPA Program. All other core curriculum areas must be completed for admission as an Associate member of CPA Australia.

4 For candidates who would like to obtain exemptions to the Association of Chartered Certified Accountants (ACCA) foundation level program.

Students should carefully note the trimesters when units are offered to ensure that all required units can be completed in the appropriate time frame. Students who wish to enter the CA or CPA programs or exemptions to the ACCA program are advised that it is their responsibility to ensure that they take the appropriate units required for entry.

Students who have completed prior undergraduate or graduate units in accounting or other core knowledge areas are advised to have their qualifications assessed by their preferred professional organisation to ensure they complete the correct units.

*Please note: The eligibility of students for membership of the accrediting body is subject to meeting the requirements of that body. Deakin makes no representations that individuals will meet those requirements.*

*Students should consult with a course adviser to identify any additional requirements for membership for each professional body, and also consult with the professional body.*

### **Elective units**

Restricted elective (one of):

MAA753	Professional Research and Analysis
MAF711	Modelling Techniques for Finance
MAF760	International Finance
MPE707	International Banking and Finance
MWL702	Business Practicum
MWL703	Team Internship
MWL704	Work Based Learning

### **Work experience**

This course provides students the opportunity to complete one or more elective work integrated learning units.

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### **Research and research-related study**

This course includes 1cp equivalent research-related study as well as learning embedded across a number of units where student achievement is demonstrated in specific assessment tasks.

# Master of Leadership

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Leadership
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is only offered in Cloud (online) mode.
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 to 2.5 years part-time*
<i>Deakin course code</i>	M797
<i>Approval status</i>	The course is approved by the University pursuant to the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*This course was previously titled: Master of Professional Practice (Leadership)*

## Course overview

The Master of Leadership is suitable for students who have progressed from the Graduate Certificate of Leadership or meet the additional entry requirements. In addition to completing the core units, successful students will complete ten professional practice credentials plus a research capstone unit, where students undertake a workplace-based research project on leadership.

Recognise the capabilities displayed by pivotal leaders, through integration of theoretical investigation and professional practice, within this specialist program. Learn to drive results while engaging others in the journey and transforming an organisation to deal with technology disruption, changing customer needs and turbulent external environments. The emphasis for this program is on developing relevant skills, contemporary knowledge, and real experience, to develop the business leaders of tomorrow.

Delivered wholly online, this program makes it ideal for busy professionals who want to study and immediately apply the knowledge and skills obtained through the unit, in their own workplace. The Professional Practice Credential Assessment complements this course, where students provide evidence of their knowledge, skills, abilities, and experience for assessment, to obtain a suite of credentials that recognise their professional expertise.

## Indicative student workload

Successful students typically spend about 150 hours in learning and assessment for each one credit point unit. The time required to prepare evidence for credential assessment varies based on the student's existing documentation.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Pathways

Completion of the associated Graduate Certificate of Leadership is an alternative entry option for students wishing to attain a Master of Leadership but who have not completed a Bachelor Degree. Students entering through this pathway will be given credit for common units and credentials. Likewise, students who enrol in a Master Degree may transfer to the associated Graduate Certificate and graduate on completing the requirements for this course.

Master of Leadership does not provide a pathway to a PhD.

## Alternative exits

M597.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of contemporary leadership theory and practices, creating new discipline knowledge through applied research methods
Communication	Demonstrate advanced communication skills through the use of tools, techniques and media to gather data, and engage and inspire others
Digital literacy	Discover, analyse, synthesise and disseminate complex information, data and ideas to stakeholders, strategic partners and professional colleagues using a range of digital technologies and channels
Critical thinking	Systematically and critically analyse and test leadership styles, models and theories to optimise leadership impact within a specific cultural and operational context to drive strategy
Problem solving	Apply advanced problem solving skills to conceptualise, design, construct and advocate for recommended innovative solutions for complex leadership related issues
Self management	Advance personal development and capacity as a leader to proactively drive and take responsibility for strategic results
Teamwork	Work across a range of professions, functions, contexts or teams to optimise collaborative outcomes, to improve strategic outcomes
Global citizenship	Define and reinforce the vision and values that orient collective effort, socially responsibility and ethical decision making

## Course rules

The Master of Leadership requires the completion of 4 credit points of units and 10 Professional Practice credentials, plus completion of MAI010 Academic Integrity (0-credit-point compulsory unit).

For further information on credentials refer to the credentials table below.

## Course structure

### Core

MAI010	Academic Integrity (0 credit points)
MPL700	Leadership Practice with Impact
MPL701	Leadership Challenges

### Credentials

Students must successfully complete ten Professional Practice credentials which include four Leadership Specialist Knowledge credentials and six employability credentials.

Successful attainment of Professional Practice credentials is based on evidence provided from professional practice, hence recognition through authentic learning experiences. All professional practice credentials are linked to the Deakin Graduate Learning Outcomes and will be assessed within the context of the leadership discipline. The credentials may be attempted separately or simultaneously and are assessed by an assessment panel that includes both academic and industry representatives. Please refer to the table below for the list of credentials.

#### *Master credential requirements*

Credentials	Minimum level* ^	Currency*
CRCOM-A1 Communication	5 (Masters-Aligned)	5 years
CRTWK-A1 Teamwork	5 (Masters-Aligned)	5 years
CRLDP-A1 Leading and developing people	5 (Masters-Aligned)	5 years
CREMO-A1 Empowering others	5 (Masters-Aligned)	5 years
CRADC-A1 Adaptive mindsets	5 (Masters-Aligned)	5 years
CRDSR-A1 Driving strategic results	5 (Masters-Aligned)	5 years
CRDIL-A1 Digital literacy	5 (Masters-Aligned)	5 years
CRCRI-A1 Critical thinking	5 (Masters-Aligned)	5 years
CRPSV-A1 Problem solving	5 (Masters-Aligned)	5 years
CRGCZ-A1 Global citizenship	5 (Masters-Aligned)	5 years

\* Applicants who have not satisfied the level requirement, or who have successfully achieved the credential but not within the required timeframe may be permitted to seek re-credentialling.

^ There are five levels and these are aligned with recognized "exit points" from the education sector, the AQF, work levels and industry frameworks. Level 5 is aligned to the AQF Masters Level.

### Capstone unit

MPP703 Leadership Research Project (2 credit points)\*

\* New title from Trimester 3 2019: Leadership Research Project

## Work experience

This course does not require students to complete compulsory work integrated learning units.

## Course duration

Students have the opportunity of fast-tracking the course in one year by completing units in three consecutive trimesters and all credentials within the first two trimesters of study.

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Commerce

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Commerce
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	006248E
<i>Deakin course code</i>	M800
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*There are currently no intakes for this course.*

## Course overview

Research master degrees may be undertaken in both Schools of the Faculty: Deakin Business School and Deakin Law School. They are available full time or part time, and in Campus or Cloud (online) mode (if appropriate). Research degrees undertaken in the Deakin Law School lead to the award of Master of Laws (by major thesis) or Doctor of Philosophy.

A member of the academic staff will be appointed as principal supervisor for each candidate for a higher degree by research. Associate supervisors, either internal or external, may be appointed to assist the principal supervisor. Candidates will be required to meet certain attendance requirements. A candidate is required to complete a thesis embodying the results of research carried out in the field of study specified at the time of enrolment.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Research information

For more information about areas in which supervision is available please contact:

Research Administration Group

research-scholarships@deakin.edu.au

## Course learning outcomes

Course learning outcomes	Deakin graduate learning outcomes
Demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating substantial contribution to knowledge through the use of appropriate research principles and methods.	<p>Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.</p> <p>Digital literacy: using technologies to find, use and disseminate information.</p> <p>Self-management: working and learning independently, and taking responsibility for personal actions.</p>
<p>Apply critical analysis and reflection to ethically research, synthesize and evaluate complex information, problems, concepts, interpretations and theories to demonstrate cognitive and technical skills in a body of knowledge or practice.</p> <p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p>	<p>Critical thinking: evaluating information using critical and analytical thinking and judgment.</p> <p>Problem solving: creating solutions to authentic (real world and ill-defined) problems.</p> <p>Teamwork: working and learning with others from different disciplines and backgrounds.</p>
Demonstrate autonomy, expert judgement, adaptability, initiative, resilience and responsibility as a practitioner or learner.	<p>Communication: using oral, written and interpersonal communication to inform, motivate and effect change.</p> <p>Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.</p>

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Laws – Major Thesis

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Laws
<i>Campus</i>	Offered at Burwood (Melbourne), Waterfront (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2.0 years full-time or part-time equivalent
<i>CRICOS course code</i>	018210J
<i>Deakin course code</i>	M810
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Complete a thesis that makes a significant contribution to research in law. A member of the School of Law's academic staff will be appointed as your principal supervisor.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Research information

For more information about areas in which supervision is available please contact:

Research Administration Group  
Tel 03 5227 2442  
[research-buslaw@deakin.edu.au](mailto:research-buslaw@deakin.edu.au)

## Research scholarships

Deakin University offers scholarships for study towards research masters degrees in all faculties. Information is available from:

University scholarships officer

# Doctor of Philosophy

<i>Year</i>	2019 course information
<i>Award granted</i>	Doctor of Philosophy
<i>Campus</i>	Offered at Burwood (Melbourne), Waterfront (Geelong), Warrnambool
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full time or part time equivalent
<i>CRICOS course code</i>	006249D
<i>Deakin course code</i>	M900
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

*Cloud (online) candidature may be available in certain circumstances, subject to approval. Students will normally be required to be on-campus while completing their research methods coursework.*

## Course overview

The Doctor of Philosophy (PhD) is a supervised research program where you'll make a substantial, original contribution to knowledge in your chosen field.

This degree may be undertaken in Deakin Business School or Deakin Law School. An expert member of the academic staff will be appointed as your principal supervisor. As well as your thesis, you'll also be required to complete a number of coursework units and meet certain attendance requirements.

Deakin currently has around 1600 higher degree by research candidates – intelligent people making the most of our excellent facilities, partnerships, strategic research centres and excellent reputation.

## Participation requirements

Units in this course may have participation requirements that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Units which contain work integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. These requirements will be detailed in unit guides upon enrolment.

## Research information

research-scholarships@deakin.edu.au

## Course learning outcomes

Course learning outcomes	Deakin graduate learning outcomes
Demonstrate systematic and critical understanding in one or more specialist fields or discipline areas by planning and generating a substantial and original contribution that advances scholarship or professional practice.	<p>Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.</p> <p>Digital literacy: using technologies to find, use and disseminate information.</p> <p>Self-management: working and learning independently, and taking responsibility for personal actions.</p>
<p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p> <p>Synthesise, apply and analyse existing and new knowledge in one or more discipline areas to develop new concepts or interpretations through engagement in ethical research, critical reflection, continuous evaluation and demonstration of research skills.</p>	<p>Critical thinking: evaluating information using critical and analytical thinking and judgment.</p> <p>Problem solving: creating solutions to authentic (real world and ill-defined) problems.</p> <p>Teamwork: working and learning with others from different disciplines and backgrounds.</p>
Demonstrate autonomy, authoritative judgement, adaptability, leadership, initiative, resilience and responsibility as an expert and leading practitioner or scholar.	<p>Communication: using oral, written and interpersonal communication to inform, motivate and effect change.</p> <p>Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.</p>

Approved by Faculty Board 14 July 2016

## Course duration

Course duration may be affected by a variety of issues, including delays in data collection and topic variations.

## Useful links

- More information on PhD Xtra: [deakin.edu.au/research/become-a-research-student/phd-xtra](https://deakin.edu.au/research/become-a-research-student/phd-xtra)
- More information on research training coursework for M900: [deakin.edu.au/students/research/course-content/research-training-coursework-units](https://deakin.edu.au/students/research/course-content/research-training-coursework-units)

## Other learning experiences

PhD students are strongly encouraged to utilise the Individual Learning Plan (ILP), an online tool that allows students to plan, document and demonstrate the full range of knowledge and skills acquired during candidature. The training components available in the ILP catalogue encompass all training activities that may be undertaken during candidature, with provision to add external training activities and record placements.

Some examples of training components include:

- research skills workshops
- advanced training in methods
- equipment training certification
- laboratory inductions
- OH&S training.

## Research and research-related study

Research is the defining characteristic of the PhD and comprises at least two thirds of the degree. Although coursework units are required, the main product of the PhD is in the form of a thesis written under the guidance of a supervisor and associate supervisor(s).

# Doctor of Business Administration

<i>Award granted</i>	Doctor of Business Administration
<i>Deakin course code</i>	M901

*Note: Offered to continuing students only. Continuing students should discuss unit selections with their enrolment officer and refer to the handbook archive for their course structure.*

# Bachelor of Engineering Science

<i>Award granted</i>	Bachelor of Engineering Science
<i>Campus</i>	For students who commenced prior to 2015
<i>Duration</i>	3 years full-time or part-time equivalent
<i>Deakin course code</i>	S302

*The final intake to this course version was in 2014. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

The Bachelor of Engineering Science is designed to develop technology-focused scientists capable of creating engineering solutions to sport and medical related problems. The course provides you with the theoretical foundation, technical skills and expertise needed to design and develop sports equipment, instrumentation and other sports related products as well as medical and physiological instrumentation, prosthetics, and other healthcare devices.

The course is designed for technically-minded students who are seeking a modern and specialised educational experience unique in Australia. You have the opportunity to take part in industry-based learning, internships and a final-year project to help you gain workplace experience and develop valuable networks. The units are mostly prescribed, with engineering, physiology and exercise and sport science units studied at each level.

The course has a common first year that will allow you to make an informed decision when choosing one of the areas listed below to specialise in.

- Sports technology – electrical
- Sports technology – mechanical
- Medical technology

Graduating students have the opportunity to undertake further studies in honours (research) and PhD programs.

Units in the course may include assessment hurdle requirements.

## Career opportunities

Graduates will be able to work in a wide range of industries, such as equipment manufacturers, professional sports associations, research institutions, medical instrumentation, prosthetics and health organisations.

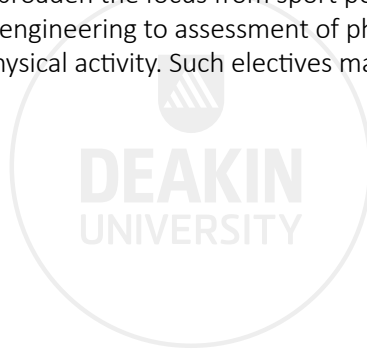

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- Ten credit points of core units (HBS109, SED102, SEE103, SEP122, SIT190, SLE111, SLE131, HSE202, SLE251, SEJ344)
- Three Safety Induction Program units (0 credit points)
  - HSE010 Exercise and Sport Laboratory Safety;
  - SEE010 Safety Induction Program; and
  - SLE010 Laboratory and Fieldwork Safety Induction Program
- At least one major study from:
  - Sports Technology – Electrical (10 credit points)
  - Sports Technology – Mechanical (10 credit points)
  - Medical Technology (9 credit points)
- The remaining units can be undertaken as elective units chosen from any units across the University, provided unit rules (including prerequisites and campus restrictions) have been met, and noting the following:
  - No more than 10 credit points at level 1, and
  - At least 6 level 3 units, of which 4 must be course grouped.
  - Elective offerings can be used to broaden the focus from sport performance to include physical activity and public health applications of engineering to assessment of physical activity and also development of tools/technologies to promote physical activity. Such electives may include HSE203, HSE316 and HSE212.

# Bachelor of Information Technology (Mobile and Apps Development)

<i>Award granted</i>	Bachelor of Information Technology (Mobile and Apps Development)
<i>Campus</i>	For students who commenced prior to 2015
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	077406G
<i>Deakin course code</i>	S303

*The final intake to this course version was in 2014. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

The Bachelor of Information Technology (Mobile and Apps Development) focuses on theories, technologies and skills required to design and develop apps on modern mobile platforms, giving you the knowledge to help you thrive in this fast-growing field. It is designed for students who are interested in the broad aspects of mobile apps design and development – from frontend mobile devices all the way to the backend systems that support mobile apps.

The course provides you with suitable foundation training in key IT skills, specialised skills in mobile apps design and development, as well as generic professional skills such as writing, communication and ethical skills. It covers key mobile apps technologies from two major platforms: Android and iOS (Apple's mobile operating system). In addition to technology-specific skills, you will also learn cross-platform development skills through the latest HTML5, backend cloud computing services (e.g. maps) and frontend JavaScript frameworks.

Units in the course may include assessment hurdle requirements.

## Career opportunities

As the uptake of broadband and mobile devices increases, industries of all types are developing new mobile apps to satisfy the needs of its customers. Developments in mobile devices are also shaping the way businesses and their employees work. Collectively, these consumer-to-consumer, business-to-consumer and business-to-business needs are driving a demand for mobile apps developers.

Graduates of this course may find career opportunities in roles such as iOS developer, iPhone application developer, Android developer, iOS web developer, mobile developer, mobile applications architect, mobile deployment officers and mobile applications programmer.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- 16 credit points of core (prescribed) units
- 8 credit points of elective units
- Completion of SIT010 Safety Induction Program (0 credit-point compulsory unit)
- Level 1 – maximum of 10 credit points
- Level 2 and 3 – minimum of 14 credit points over both levels
- Level 3 – minimum of 6 credit points of which at least 4 must be SIT Course Grouped units

# Bachelor of Architectural Technology

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Architectural Technology
<i>Campus</i>	For students who commenced prior to 2015
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	081313A
<i>Deakin course code</i>	S304

*The final intake to this course version was in 2014. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

This unique course offering enables you to study concurrently through Deakin and The Gordon in East Geelong, to combine your interest in traditional architecture, design and project management to become a qualified architectural technologist capable of employment across commercial, industrial and domestic projects.

You'll commence your studies at The Gordon, where you'll learn a combination of theory and hands-on skills, and undertake field trips.

Your final year at Deakin will enhance your studies with a focus on theoretical learning. With this combination of learning experiences and attractive blend of knowledge, you'll be set to play a pivotal role in the construction phase of architectural project delivery.

As a graduate of this course you'll have the skills required for employment in commercial, industrial and domestic projects across the entire scope of construction – from project planning to design to contract management and beyond. Following successful completion of this course, you'll graduate with a degree from Deakin.

Units in the course may include assessment hurdle requirements.

## Professional recognition

Graduates of this programme meet the Chartered Institute of Architectural Technologists (CIAT) requirements for Associate membership.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.	<p>Apply broad and coherent knowledge of designs, structures, management and documentation to realise a built environment bringing together ideas and utility requirements while achieving buildability and functional needs.</p> <p>Integrate the knowledge of language of architecture, its meanings, capacities and implications to mediate compromises that must come to play to deliver an optimal outcome through the building process and thereby demonstrate the capacity to making decisions to realise a human landscape.</p>
Communication: using oral, written and interpersonal communication to inform, motivate and effect change.	<p>Apply knowledge of the language of design to interpret and translate architectural concepts into accurate specifications and documents in order to communicate the requirements to a variety of audiences in a manner that explains the management of the realisation of a built environment from conceptualisation to realisation.</p> <p>Communicate clearly, professionally and responsibly in a variety of contexts using oral, visual, digital, graphic and interpersonal communication modes to inform, motivate and persuade industry practitioners, clients and other stakeholders about the technology of Architecture.</p>
Digital literacy: using technologies to find, use and disseminate information.	Apply well-developed cognitive skills to locate, evaluate, use and disseminate information, concepts, design and project documentation using appropriate design and modelling tools relevant to the architectural and construction industry.
Critical thinking: evaluating information using critical and analytical thinking and judgment.	Use well-developed judgement to analyse and evaluate possible design and construction options individually and collaboratively, assess the advantages and disadvantages, and make decisions that are likely to deliver a well-adjusted outcome that aligns design aspirations and objectives with the expected buildability outcomes.
Problem solving: creating solutions to authentic (real world and ill-defined) problems.	Identify and resolve problems and thereby integrate a range of performance specifications and requirements that may be conflicting such as functionality, utility, durability, quality, time, buildability and cost.
Self-management: working and learning independently, and taking responsibility for personal actions.	<p>Work independently and collaboratively to document architectural ideas, specifications, legislative requirements and buildable responses in an ethical, responsible and professional manner.</p> <p>Use initiative and judgement to reflect on knowledge and skills, to demonstrate autonomy and capacity to identify opportunities for improving practice.</p>
Teamwork: working and learning with others from different disciplines and backgrounds.	Work as a team to analyse and evaluate complex problems, and share critical, analytical and creative approaches to select best responses to problems in the built environment.

Deakin graduate learning outcomes	Course learning outcomes
Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context	Engage with global trends in contemporary architectural technologies and demonstrate the ability to act as a conduit to combine subjective and objective perspectives of architects and constructors in the process of formulating buildable responses taking into account economic, cultural, social and ethical values inherent in human landscape.

Approved by Faculty Board 14 July 2016

## Course rules

The course comprises 24 credit points, which must include the following:

- equivalent of 14 credit points from units undertaken at The Gordon's East Geelong Campus;
- equivalent of 10 credit points from units undertaken at Deakin University including:

*Note: you must complete the requirements of The Gordon component within years one and two of enrolment while completing 2 credit points of study at Deakin in the second year as a campus student. You will complete a further 8 credit points of study as a campus student at Deakin in your third year of study.*

# Global Science and Technology Program

<i>Year</i>	2019 course information
<i>Campus</i>	Burwood (Melbourne), Waterfront (Geelong), Geelong Waurm Ponds, Warrnambool
<i>Cloud Campus</i>	No

*Non Award*

## Course overview

The Global Science and Technology Program is designed to add an international experience to your degree, supporting you to develop new skills and a broader world view while studying overseas.

The Global Science and Technology Program aims to recognise, reward and support high-achieving students in the Faculty of Science, Engineering and Built Environment who would like to conduct part of their studies overseas through an exchange or study abroad program.

A minimum ATAR of 80.00 is required for entry into this course. Applicants must also meet the published VTAC prerequisites for their specific course preference.

Successful applicants will be offered a monetary scholarship to assist with travel costs and will be required to participate in the Deakin Global citizenship Program.

Scholarships will be awarded across the faculty to students undertaking any course offered by the Faculty of Science, Engineering and Built Environment.

## Further information

Further information on entry requirements and how to apply can be found at [deakin.edu.au/sebe/global](http://deakin.edu.au/sebe/global)

Or contact:

Niki Calastas  
 Faculty of Science, Engineering and Built Environment

# Bachelor of Computer Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Computer Science
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	083695K
<i>Deakin course code</i>	S306
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Deakin's Bachelor of Computer Science will equip you with the knowledge and practical skills required to design and develop innovative software solutions to complex information and technology problems faced by communities, businesses and industries.

The course is ideally suited to those who are passionate about solving problems and creating solutions, curious about how something works, rather than simply what it does and interested in working at the leading edge of technology innovation and development.

We provide a comprehensive and systematic study of computer systems and networks, data management and information processes, human computer interaction, programming and software development, computing theory, mathematical methods, and algorithm design and analysis.

You'll gain hands-on experience and a practical understanding of theory through learning activities in our modern computing laboratories, working with the latest hardware and software technologies alongside our internationally recognised academic staff. Our world-class research programs in computer science feed directly into our classrooms, meaning that you'll be learning at the cutting edge of industry expectations and capabilities.

The Bachelor of Computer Science has been accredited by the Australian Computer Society (ACS), ensuring a high quality of education and providing you with international recognition as an ICT industry professional.

Computer science graduates are in high demand in Australia and internationally and find employment in a variety of roles, such as data scientist, software developer, software engineer, systems or network administrator, database administrator or developer, solutions architect, systems analyst, or project manager. Computer scientists also work in specialist research and development roles, in both public and private organisations.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Bachelor of Computer Science is professionally accredited with the Australian Computer Society (ACS).

## Career opportunities

You will be suited to find employment in organisations engaged in software development, Big Data analysis and cloud computing infrastructure. New graduates are typically employed as a software developers, software analysts and designers, database and web developers, network and systems managers, and IT consultants. As your experience develops, you will also be well prepared for progression into project management positions.

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Course expenses

### Student equipment purchases

The learning experiences and assessment activities within this course require that students have access to a range of technologies beyond a desktop computer or laptop. Access to high cost specialist equipment, such as robots, is provided. Students will be required to purchase minor equipment, such as small single board computers, microcontrollers and sensors, which will be used within a range of units in this course. This equipment is also usable by the student beyond their studies. Equipment requirements and details of suppliers will be provided on a per-unit basis. The indicative cost of this equipment for this course is AUD\$500.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a broad, coherent knowledge of the computer science discipline, with detailed knowledge of the application of computer science methods and principles in modern computing systems. Use knowledge, skills, tools and methodologies for professional computer science practice. Design algorithms, system models, software components, computing systems and processes, to meet application requirements within realistic economic, environmental, social, political, legal and ethical constraints.
Communication	Communicate in a computer science context to inform, motivate and effect change by utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Utilise a range of digital technologies and information sources to discover, analyse, evaluate, select, process and disseminate both technical and non-technical information.
Critical thinking	Evaluate specialist computer science information using critical and analytical thinking, technical skills and well-developed personal judgement and values to identify problems, analyse requirements and propose solutions.
Problem solving	Apply theoretical constructs and skills and critical analysis to real-world and ill-defined problems and develop innovative computing solutions.
Self-management	Apply knowledge and skills to new situations in professional practice and/or further learning in the field of computer science with adaptability, autonomy, responsibility and personal accountability for actions as a practitioner and a learner. Apply understanding of reflective practice and self-critique skills within broad parameters to plan for their own future continuing professional development.
Teamwork	Contribute effectively as a skilled and knowledgeable individual to the processes and output of a work unit or team. Work collaboratively in multi-disciplinary teams, employing effective communication, self- and team-management skills to achieve shared goals.
Global citizenship	Apply professional and ethical standards and accountability for own learning to in the development, design, construction and management of localised computing solutions.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Computer Science, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 17 core IT units (which includes a compulsory internship unit SIT306 IT Internship or STP301 Industry Based Learning)
- 6 general elective units totalling 6 credit points
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of SIT010 Safety Induction Program (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SIT010	Safety Induction Program (0 credit points)
SIT111	Algorithms and Computing Systems
SIT192	Discrete Mathematics
SIT112	Data Science Concepts

elective

##### Trimester 2

SIT102	Introduction to Programming
SIT103	Data and Information Management
SIT123	Data Capture Technologies

elective

#### Level 2

##### Trimester 1

STP010	Introduction to Work Placements (0 credit points)
SIT210	Embedded Systems Development
SIT223	Professional Practice in Information Technology
SIT232	Object-Oriented Development

elective

##### Trimester 2

SIT202	Networks and Communications
SIT221	Data Structures and Algorithms
SIT215	Artificial and Computational Intelligence

elective

## Level 3

### Trimester 1

SIT315 Programming Paradigms

Plus two elective units

### Trimester 2

SIT316 Optimisation and Constraint Programming

SIT318 Innovation Design and Prototyping (2 credit points)+

SIT307 Data Mining and Machine Learning #

Plus one unit in:

SIT306 IT Placement ^

STP301 Industry Based Learning

^ Offered in Trimester 1, trimester 2 and Trimester 3

# Offered in Trimester 1 from 2020

+ not available in 2019 (In 2019, students may undertake SIT374 Project Design and SIT302 Project Delivery concurrently however students are encouraged to complete these units in consecutive trimesters if possible.)

## Electives

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

## Work experience

This course includes a compulsory work placement where you will be required to undertake a minimum of 100 hours in industry, providing professional work experience with an approved host organisation. Alternatively, high achieving students may have the opportunity to undertake an extended full-time paid industry-based learning placement between 6–12 weeks (conditions apply, please refer to [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).)

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You will have the opportunity to participate in a range of extra-curricular learning opportunities, such as internal and external competitions and challenges, industry projects within the Deakin Incubator Group, and international study tours.

<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	0100304
<i>Deakin course code</i>	S308
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

*New course commencing Trimester 1 2020*

## Course overview

Artificial intelligence is driving digital disruption, with new technology helping redefine many industries. Many companies are looking to take advantage of recent advances in artificial intelligence, which is creating a large demand for skilled professionals. Deakin's Bachelor of Artificial Intelligence will equip you with the knowledge and skills necessary to design, develop, and evolve software solutions that take advantages of the latest advances in artificial intelligence.

As an artificial intelligence specialist, you will work alongside software engineers, data scientists, application developers and business analysts, applying your specialist knowledge to ensure artificial intelligence is appropriately integrated into software solutions from a technical and human perspective.

You will gain hands-on experience in the development of software solutions and the use and development of artificial intelligence. Our world-leading research in artificial intelligence feed directly into our classrooms, meaning that you'll be learning at the cutting edge of industry expectations and capabilities.

As a graduate you will be well-equipped to work on the design, development, and operation of software solutions involving artificial intelligence.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Career opportunities

AI offers an exciting future for students as more industries spend time and money on improving what they do through learned behaviour and operating efficiencies. However this is the tip of the iceberg and many more challenging real-world problems remain to be solved.

Graduates will have the specialist knowledge and be equipped to work on the design, development and operation of software solutions involving AI, across a broad range of industry sectors. You may find employment in roles such as a data scientist, data analyst, AI technology software engineer, AI ethicist or an AI architect to name a few.

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin’s website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

Graduates of the Bachelor of Artificial Intelligence will be able to progress to further studies in the Master of Applied Artificial Intelligence, the Master of Data Science or pursue research higher degrees after enrolling in the Bachelor of Information Technology (Honours).

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology’s website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Develop a broad, coherent knowledge of the discipline of artificial intelligence, including deep learning and reinforcement learning, with detailed knowledge of key AI algorithms.</p> <p>Design, develop and implement software solutions that incorporate artificial intelligence</p> <p>Apply knowledge of artificial intelligence to the research and evaluation of AI solutions and provision of specialist advice.</p>
Communication	<p>Prepare different types of technical and user-oriented documentation using adequate structure, terminology and context.</p> <p>Convey information in a clear, concise and coherent manner using appropriate oral communication techniques and skills.</p> <p>Represent ideas using IT codes, conventions, modelling languages, and standards to reflect on artificial intelligence ideas and processes in an effective manner.</p> <p>Apply interpersonal skills to proactively assist, contribute to ideas, respect opinions and value contribution made by others when working collaboratively.</p>

Deakin graduate learning outcomes	Course learning outcomes
Digital literacy	<p>Identify, select and use digital technologies and tools to generate, manage and share digital resources associated with artificial intelligence concepts and solutions.</p> <p>Independently and systematically locate information, evaluate its reliability, and use the information for design and problem solving.</p> <p>Identify appropriate practices and processes to ensure the security, integrity, safety and availability of digital resources.</p>
Critical thinking	<p>In assessing artificial intelligence scenarios, critically evaluate arguments, hypothesis, systems, and proposals to identify basic statements.</p> <p>In assessing artificial intelligence scenarios, locate ambiguity and vagueness in arguments, requirements, and proposals to determine if ideas are reasonable, and identify information that may be contradictory, omitted, or not collected.</p> <p>In assessing artificial intelligence scenarios, apply judgement in evaluating ideas, associated reasoning, and available evidence to arrive at conclusions that are valid.</p>
Problem solving	<p>Apply technical skills, knowledge and techniques to identify and define problems utilising artificial intelligence in a variety of contexts.</p> <p>Apply technical skills and knowledge in modelling methods and processes to understand problems, handle abstraction and design artificial intelligence solutions.</p> <p>Apply technical skills and knowledge to develop creative approaches and/or solutions in planning, designing, managing, evaluating and executing artificial intelligence projects.</p>
Self-management	<p>Evaluate own knowledge and skills using frameworks of reflection and use that self-awareness to target professional goals.</p> <p>Recognise the need, and engage in, independent learning for continual development as a computing professional.</p> <p>Work under general direction, engaging in the feedback process independently to ensure outcomes are achieved.</p>
Teamwork	<p>Contribute knowledge and skills of artificial intelligence when working within a team, demonstrating responsibility and accountability.</p> <p>Engage consistently and professionally in groupware to contribute knowledge and skills of artificial intelligence to achieve shared team objectives and outcomes.</p> <p>Apply strategies to support positive group dynamics and to function effectively as a team member.</p>
Global citizenship	<p>Apply professional ethics, responsibilities, and norms of professional computing practice.</p> <p>Demonstrate awareness of regulation and ethical implications of acquisition, use, disclosure and eventual disposal of information.</p> <p>Engage with societal, health, safety, legal, and cultural issues to identify consequential responsibilities relevant to artificial intelligence in practice.</p>

Approved by Faculty Board 14 March 2019

## Course rules

To complete the Bachelor of Artificial Intelligence, students must attain 24 credit points.

The course comprises a total of 24 credit points, which must include the following:

- 20 core units (totalling 20 credit points)
- 4 credit points of elective units
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of SIT010 Safety Induction Program (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SIT010	Safety Induction Program (0 credit points)
STP010	Introduction to Work Placements (0 credit points)
SIT102	Introduction to Programming
SIT192	Discrete Mathematics
SIT111	Algorithms and Computing Systems
SIT114	Introduction to Artificial Intelligence

##### Trimester 2

SIT232	Object-Oriented Development
SIT103	Data and Information Management
SIT202	Networks and Communications
SIT194	Introduction to Mathematical Modelling

#### Year 2

##### Trimester 1

SIT221	Data Structures and Algorithms
SIT215	Artificial and Computational Intelligence

Plus two elective units

##### Trimester 2

SIT315	Programming Paradigms
SIT223	Professional Practice in Information Technology
SIT292	Linear Algebra for Data Analysis

Plus one elective unit

##### Trimester 3

SIT306	IT Placement
--------	--------------

## Year 3

### Trimester 1

SIT374	Project Design
SIT307	Data Mining and Machine Learning
SIT319	Advanced Topics in Artificial Intelligence <sup>^</sup>

Plus one elective unit

### Trimester 2

SIT302	Project Delivery
SIT316	Optimisation and Constraint Programming
SIT314	Developing Scalable Internet-Of-Things Applications

<sup>^</sup> available from 2022

## Electives

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

It is important to note that some elective units may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

## Work experience

This course includes a compulsory work placement where you will be required to undertake a minimum of 100 hours in industry, providing professional work experience with an approved host organisation. Alternatively, high achieving students may have the opportunity to undertake an extended full-time paid industry-based learning placement between 6–12 weeks (conditions apply, please refer to [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).)

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Science

<i>Award granted</i>	Bachelor of Science
<i>Campus</i>	For students who commenced prior to 2015
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	076198G
<i>Deakin course code</i>	S320 (version 3)

*The final intake to this course version was in 2014. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Science allows you to start with a broad program then specialise as you progress through the course, developing your interests and career aspirations.

Science at Deakin is not just about laboratory work, but prepares you for a range of real-life settings in which today's science graduates work. You will gain experience through practical programs undertaken in modern teaching laboratories.

The course is available as a single degree course or as a combined degree course with Arts, Commerce, Engineering, Law and Teaching (Science). Approved major sequences within the Bachelor of Science include Biology, Biological Chemistry, Chemistry, Environmental Science, Mathematical Modelling and Zoology. See below for information on the campus of offer for major sequences.

As part of the course you will complete a Laboratory Safety and Fieldwork Induction Program, as well as Professional Practice/Science Skills units. The Professional Practice stream, plus an optional Industry-Based Learning placement, will allow you to gain valuable work experience, giving you the opportunity to apply and consolidate what you are learning in your course, as well as experience workplace culture and workplace practices, explore career options and develop a professional network.

Units in the course may include assessment hurdle requirements.

## Career opportunities

Graduates of this course may find career opportunities in government institutions, in roles such as quality assurance, occupational health and safety, research, planning, management or marketing; science related industries, working in pharmaceutical production or pharmaceutical sales; biomedical science areas such as research or hospital and laboratory science; quality assurance in analytical and diagnostic laboratories; the food industry in quality control; environment and natural resources, teaching, information technology, mathematics or science journalism to name a few.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- at least 16 credit points from science course grouped units (which includes all core and optional core units, all units within the approved science majors)
- 7 core science units
- At least one 8 credit point approved Science major sequence
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit-point compulsory unit)
- Level 1 – up to 10 credit points
- Level 3 – at least 6 credit points (at least 4 must be Science course grouped)
- Up to 8 cp of electives may be selected from units offered by any area of the University

## Major sequences

Refer to the details of each major sequence for availability.

- Biology
- Biological Chemistry
- Chemistry
- Environmental Science
- Mathematical Modelling
- Zoology

## Details of major sequences

### **Biology – unit set code MJ-S000008**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

The biology major sequence is suitable for students who wish to obtain experience in a broad range of biological sub-disciplines. It offers the flexibility to choose units from disciplines ranging from human biology to ecology and environment.

SLE111	Cells and Genes
SLE132	Biology: Form and Function

Plus 6 additional Biology course grouped units from the list below (minimum of 2 at levels 2 and 3)

#### **Level 1**

SLE136	Life On An Evolving Planet
--------	----------------------------

#### **Level 2**

SLE203	Plant Biology
SLE204	Animal Diversity
SLE205	Vertebrate Structure and Function
SLE206	Cell Biology
SLE211	Principles of Physiology
SLE212	Biochemistry
SLE221	Systems Physiology
SLE222	Biochemical Metabolism
SLE234	Microbiology
SLE254	Genetics and Genomics
SLE208	Forensic Biology
SLE220	Wildlife Ecology
SLE224	Animal Behaviour
SLE237	Biogeography

**Level 3**

SLE307	Behavioural Ecology
SLE315	Marine Animal Physiology
SLE321	Molecular Biology Techniques
SLE334	Medical Microbiology and Immunology
SLE339	Human Genetics and Genomics
SLE340	Genomes and Bioinformatics
SLE346	Molecular Basis of Disease
SLE370	Evolution
SLE395	Palaeobiology ^
SLE397	Sensory Neurobiology and Behaviour
SLE312	Toxicology
SLE309	Wildlife Conservation
SLE310	Pest Plants and Animals
SLE317	Australian Vegetation and Its Management
SLE322	Landscape Ecology
SLE350	Marine Wildlife
SLE372	Unit description is currently unavailable

^ not available in 2015 (available in 2016)

**Biological Chemistry – unit set code MJ-SU00012****Burwood (Melbourne), Waurn Ponds (Geelong)**

The biological chemistry major sequence provides the fundamental language of chemistry and chemistry arithmetic for students wishing to understand the more chemically-oriented facets of modern biology.

Students must complete 8 units from the following (must include a minimum of 2 credit points at level 2 and a minimum of 2 credit points at level 3):

SLE155	Chemistry for the Professional Sciences
SLE210	Chemistry the Enabling Science
SLE212	Biochemistry
SLE214	Organic Chemistry
SLE222	Biochemical Metabolism
SLE213	Introduction to Spectroscopic Principles
SLE235	Chemical Systems (Tri-3)
SLE311	Chemical Hazards
SLE312	Toxicology

**Chemistry – unit set code MJ-S000009****Waurn Ponds (Geelong)**

This major sequence provides an introduction to the synthesis, separation, detection and measurement of chemical substances, their properties and reactions.

SLE155	Chemistry for the Professional Sciences
SLE210	Chemistry the Enabling Science
SLE213	Introduction to Spectroscopic Principles
SLE214	Organic Chemistry
SLE229	Introduction to Separation Science

Plus at least 3 from the following list:

- SLE212 Biochemistry
- SLE235 Chemical Systems \*
- SLE316 Analytical Chemistry
- SLE318 Synthetic and Medicinal Chemistry

Either:

- SLE311 Chemical Hazards or
- SLE312 Toxicology

\* SLE235 is offered in Trimester 3 in alternate years (even numbered years)

### ***Environmental Science – unit set code MJ-S000011***

#### ***Burwood (Melbourne)***

This major sequence focuses on the technical science aspects of environmental science, and aims to provide an even balance between environmental studies on the geosphere, hydrosphere, atmosphere and biosphere.

- SLE103 Ecology and the Environment
- SLE102 Physical Geography
- SLE202 Landscape Evolution
- SHD301 Creating Sustainable Futures

One of:

- SLE237 Biogeography or
- SLE231 Hydrology and Water Resources Management

One of:

- SLE322 Landscape Ecology or
- SLE317 Australian Vegetation and Its Management

Plus 2 'restricted elective' units from the following list (at least 1 unit from level 2 or 3):

- SLE151 Biodiversity: A Global Perspective
- SLE101 Techniques in Environmental Science ^
- SLE239 Introduction to Geographic Information Systems
- SLE204 Animal Diversity
- SLE203 Plant Biology
- SLE220 Wildlife Ecology
- SLE237 Biogeography
- SLE231 Hydrology and Water Resources Management
- SLE322 Landscape Ecology
- SLE317 Australian Vegetation and Its Management
- SLE342 Risks to Healthy Environments

^ recommended elective

**Mathematical Modelling – unit set code MJ-S000007**

*Burwood (Melbourne), Cloud (online), Waurm Ponds (Geelong)*

Studies in mathematical modelling provide you with a strong critical knowledge base and develops powers of analysis, logical thinking and problem solving, as well as a high level of numerical ability.

- SIT192 Discrete Mathematics
- SIT194 Introduction to Mathematical Modelling
- SIT281 Cryptography
- SIT291 Mathematical Methods for Information Modelling
- SIT292 Linear Algebra for Data Analysis
- SIT396 Complex Analysis
- SIT392 Public-Key Cryptography
- SIT399 Optimization Modelling and Decision Analysis

Sub-major sequence for D351 Bachelor of Teaching (Science)/Bachelor of Science students

For students who have not completed VCE Mathematical Methods 3 & 4

- SIT192 Discrete Mathematics
- SIT190 Introductory Mathematical Methods
- SLE251 Research Methods and Data Analysis
- SIT292 Linear Algebra for Data Analysis
- OR
- SIT281 Cryptography

**Zoology – unit set code MJ-S000025**

*Waurm Ponds (Geelong)*

Study the biology of animals from several aspects ranging from an understanding of how animals function, their evolution and their relationship with the environment.

- SLE111 Cells and Genes
- SLE132 Biology: Form and Function
- SLE204 Animal Diversity
- SLE254 Genetics and Genomics
- SLE205 Vertebrate Structure and Function
- SLE315 Marine Animal Physiology
- SLE397 Sensory Neurobiology and Behaviour

And one of:

- SLE370 Evolution
- SLE372 Unit description is currently unavailable

<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	083996G
<i>Deakin course code</i>	S320 (version 4)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Science at Deakin is a flexible degree that allows you to explore a diverse range of science-related study areas before you choose to specialise in at least one area of interest as you progress through the course. The degree is about more than just laboratory work, and prepares you for a diverse range of real-life settings in which today's science graduates work. Majors are available in Animal Biology, Cell Biology, Chemistry, Chemistry and Materials Science, Environmental Science, Genomics, Geography, Human Biology, Mathematical Modelling, Natural History and Plant Biology.

Throughout the course you'll gain experience through practical programs undertaken in modern teaching laboratories, complete a Community Science Project and have an opportunity to undertake an Industry-Based Learning placement, which will provide you with valuable work experience before you graduate.

This course is available as a single degree or as a combined degree course with Arts, Commerce, Law and Teaching.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates of this course may find career opportunities in government institutions, in roles such as quality assurance, occupational health and safety, research, planning, management or marketing; science related industries, working in pharmaceutical production or pharmaceutical sales; biomedical science areas such as research or hospital and laboratory science; quality assurance in analytical and diagnostic laboratories; the food industry in quality control; environment and natural resources, fisheries resource management, aquaculture management, teaching, information technology, mathematics or science journalism to name a few.

## Participation requirements

You may be required to complete units in Trimester 3 depending on your chosen major. Please refer to the Handbook for unit offering patterns.

Elective units may be selected that may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Apply a broad and coherent knowledge of the scientific disciplines of mathematics, physics, chemistry, biology and the environment within the chosen major area(s) of study to demonstrate a deep understanding of scientific facts, scientific practices and the edifice of science.</p> <p>Apply technical knowledge and skills and use them in a range of activities, in a professional and/or academic setting within the major area(s) of study; this application of technical knowledge and skills being characterised by demonstrable in-depth knowledge of scientific methods and tools, and demonstrable proficiency in the utilisation of chosen major area(s) knowledge.</p> <p>Use hypotheses, laws, facts and theories to investigate, test, analyse, and evaluate scientific data and demonstrate autonomy, well-developed judgement and responsibility to argue about characteristics and aspects of scientific theory in the advancement of science.</p>
Communication	<p>Demonstrate listening skills and the ability to use a range of communication skills to accommodate, encourage and answer audience questions. Articulate the boundaries or limits of scientific information, experimental or field data, discuss error, probability, uncertainty, conclusions and arguments.</p> <p>Judge how well to present essential details of scientific procedures, key observations, results and conclusions in a professional manner using appropriate style, language and references including local, national, and international contributions or contexts.</p>
Digital literacy	<p>Use well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise and disseminate scientific literature, information, data and results.</p>

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	<p>Locate and evaluate scientific information from multiple sources and use scientific methods and frameworks to structure and plan observations, experimentation or fieldwork investigations.</p> <p>Use critical and analytical thinking and judgement to analyse, synthesise and generate an integrated knowledge, formulate hypotheses and test them against evidence-based scientific concepts and principles.</p>
Problem solving	<p>Use initiative and creativity in planning, identifying and using multiple approaches to recognise, clarify, construct and solve problems taking into account relevant contextual factors.</p> <p>Advocate scientific methodologies, hypotheses, laws, facts and principles to create solutions to authentic real world problems.</p>
Self-management	<p>Take personal, professional and social responsibility within changing professional science contexts to develop autonomy as learners and evaluate own performance.</p> <p>Work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.</p>
Teamwork	<p>Work independently and collaboratively as a team to contribute towards achieving team goals and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in diverse professional, social and cultural contexts.</p>
Global citizenship	<p>Apply scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with others to articulate the place and importance of science in the local and global community.</p>

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Science, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The 24 credit points include 8 core units (these are compulsory), 10 elective units (you can choose which ones to study) and 6 units from a major study (you will be required to complete at least one major).

The course comprises a total of 24 credit points, which must include the following:

- 8 core Science units
- At least one 6 credit point approved Science major sequence
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- Level 1 – up to 10 credit points
- Level 3 – at least 6 credit points (including a minimum of 4 Science units)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Major sequences

Refer to the details of each major sequence for availability.

Students must complete at least one major from the following areas:

- Animal Biology
- Cell Biology
- Chemistry
- Chemistry and Materials Science
- Environmental Science
- Freshwater Biology
- Fisheries and Aquaculture
- Genomics
- Geography
- Human Biology
- Mathematical Modelling
- Natural History
- Plant Biology

## Course structure

### Core units

STP050	Academic Integrity (0 credit points)
SLE010	Laboratory and Fieldwork Safety Induction Program (0 credit points)
STP010	Introduction to Work Placements (0 credit points)
SLE111	Cells and Genes
SLE103	Ecology and the Environment
SIT191	Introduction to Statistics and Data Analysis
SLE123	Physics for the Life Sciences
SLE209	History and Philosophy of Science
SLE200	Communicating Science Ideas
SLE352	Community Science Project #

### Chemistry – choose one from:

SLE133	Chemistry in Our World <sup>^</sup>
SLE155	Chemistry for the Professional Sciences <sup>^</sup>

<sup>^</sup> Note: Students who have not completed Year 12 Chemistry or equivalent may choose to do SLE133 Chemistry in Our World in Trimester 1. Students who have completed Year 12 Chemistry or equivalent may choose to do SLE155 Chemistry for the Professional Sciences in Trimester 2.

# Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

## Electives

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

## Work experience

You will have an opportunity to undertake a discipline-specific Industry-Based Learning placement as part of your course. This will provide you with the opportunity to apply and consolidate what you are learning in your course, experience workplace culture and workplace practices, explore career options and develop a professional network before you graduate. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

## Details of major sequences

### **Chemistry and Materials Science – unit set code – MJ-S000066**

*Burwood (Melbourne)*

#### Overview

This major sequence provides students with an initial grounding in chemistry and builds towards specialised skills in materials chemistry (which involves the study and design of new materials) and electrochemistry (which deals with the interaction between electrical energy and chemical change).

#### Units

SLE210	Chemistry the Enabling Science *
SLE214	Organic Chemistry
SLE235	Chemical Systems (Tri-3)
SLE212	Biochemistry
SLE330	Materials Chemistry
SLE338	Electrochemistry for a Sustainable Future

\* prerequisite unit applies (SLE155 Chemistry for the Professional Sciences)

### **Animal Biology – unit set code – MJ-S000064**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

#### Overview

This major sequence provides an introduction to different aspects of animal biology including animal structure and function, evolution and evolutionary biology.

#### Units

SLE132	Biology: Form and Function
SLE204	Animal Diversity
SLE205	Vertebrate Structure and Function
SLE315	Marine Animal Physiology
SLE307	Behavioural Ecology (Tri-3)
SLE370	Evolution

### **Cell Biology – unit set code – MJ-S000065**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

#### Overview

This major sequence provides an introduction to the molecular and biochemical basis of cells, including their physiological properties, development, function and interaction with their environment. Students will also learn about the molecular basis of disease.

#### Units

SLE212	Biochemistry ^
SLE254	Genetics and Genomics
SLE206	Cell Biology
SLE222	Biochemical Metabolism
SLE346	Molecular Basis of Disease

plus

SLE340	Genomes and Bioinformatics * or
SLE321	Molecular Biology Techniques ~

^ prerequisite unit applies (SLE155 Chemistry for the Professional Sciences)

~ Available at the Geelong Waurn Ponds Campus from 2020

\* Available at the Melbourne Burwood Campus from 2020

**Chemistry – unit set code – MJ-S000009***Waurm Ponds (Geelong)***Overview**

This major sequence provides an introduction to the synthesis, separation, detection and measurement of chemical substances, their properties and reactions.

**Units**

SLE210	Chemistry the Enabling Science *
SLE213	Introduction to Spectroscopic Principles
SLE214	Organic Chemistry
SLE229	Introduction to Separation Science
SLE316	Analytical Chemistry
SLE318	Synthetic and Medicinal Chemistry

\* prerequisite unit applies (SLE155 Chemistry for the Professional Sciences)

**Environmental Science – unit set code – MJ-S000011***Burwood (Melbourne)***Overview**

This major sequence focuses on the technical aspects of environmental science, and aims to provide a balance between environmental studies on the geosphere, hydrosphere, atmosphere and biosphere.

**Units**

SLE102	Physical Geography
SLE239	Introduction to Geographic Information Systems
SLE231	Hydrology and Water Resources Management
SLE202	Landscape Evolution
SHD301	Creating Sustainable Futures
SLE322	Landscape Ecology

**Freshwater Biology – unit set code – MJ-S000067***Waurm Ponds (Geelong)***Overview**

Freshwater biology is the study of freshwater ecosystems and the relationships between freshwater organisms and their physical and chemical environment. Focused on understanding and managing rivers, lakes and wetlands, you will develop the knowledge and skills to manage freshwater ecosystems and resources, whilst participating in fieldwork opportunities and industry placements. Offered as a major sequence within the Bachelor of Science, freshwater biology at Deakin focuses on real-world problem-solving, and addresses the challenges facing Australia's freshwater systems.

**Units**

SLE263	Marine and Coastal Ecosystems
SLE244	Aquatic Ecology
SLE223	Water Quality and Ecological Health
SLE348	Freshwater Biology
SEV322	Hydrology and Hydraulics
SLE304	Geographic Information Systems: Uses in Aquatic Environments

## **Fisheries and Aquaculture – unit set code – MJ-S000072**

### *Waurm Ponds (Geelong)*

#### Overview

This major sequence provides you with comprehensive training in fisheries resource management, aquaculture management, and fisheries biology, with a focus on environmental sustainability, particularly renewable resource exploitation and culture of marine and freshwater species. You will learn about fisheries and aquaculture from a global perspective, including topics such as fish markets, nutrition and farm certification processes, the history of Australian fisheries, fisheries methods and impacts of fishing.

#### Units

SLE134	Recreational Fisheries Science (Tri-3)
SLE262	Aquaculture and the Environment
SLE261	Diversity of Fishes
SLE217	Aquaculture Nutrition and Seafood Quality
SLE329	Aquatic Animal Health and Reproduction
SLE343	Fisheries Management

## **Geography – unit set code – MJ-S000074**

### *Burwood (Melbourne)*

#### Overview

This major sequence is ideally suited to students with an interest in human and physical geography. Human geographers focus on economic, social and cultural dimensions that shape our relationship with the environment. Physical geographers seek to explore and understand the planet's many natural environments, as well as the distribution of plants and animals.

#### Units

SLE102	Physical Geography
AIG103	People and Place: An Introduction to Human Geography
SLE202	Landscape Evolution
SLE237	Biogeography (Tri-3)
SLE328	Oceans, Coasts and Climate Change *
AIG300	Australian Urban Geography: National and International Perspectives

\* Available from 2020

## **Genomics – unit set code – MJ-S000075**

### *Burwood (Melbourne), Waurm Ponds (Geelong)*

#### Overview

Genomics is the study of the genetic code of plants, animals and bacteria. This major sequence provides an introduction to the nature of genes and genomes, how they are structured, function and evolve. You will also learn about DNA sequencing and analysis and how an understanding of genomics relates to human health and wellbeing, the environment, biodiversity management and food production systems.

#### Units

SLE234	Microbiology
SLE254	Genetics and Genomics
SLE228	Forensic Genomics
SLE340	Genomes and Bioinformatics *
SLE321	Molecular Biology Techniques ~
SLE341	Ecological and Conservation Genetics *

\* Available at the Melbourne Burwood Campus from 2020

~ Available at the Geelong Waurm Ponds Campus from 2020

**Human Biology – unit set code – MJ-S000068***Burwood (Melbourne), Waurn Ponds (Geelong)***Overview**

This major sequence enables you to discover how the body works and why it works that way through studies covering a broad range of areas relevant to human biology, including physiology and genetics, and their relationship to human disease.

**Units**

SLE132	Biology: Form and Function
SLE254	Genetics and Genomics
SLE211	Principles of Physiology
SLE221	Systems Physiology
SLE323	Advanced Topics in Biomedical Science

plus

SLE339	Human Genetics and Genomics ~ or
SLE340	Genomes and Bioinformatics *

\* Available at the Melbourne Burwood Campus from 2020

~ Available at the Geelong Waurn Ponds Campus from 2020

**Mathematical Modelling – unit set code – MJ-S000007***Burwood (Melbourne), Cloud (online), Waurn Ponds (Geelong)***Overview**

Studies in mathematical modelling provide you with a strong critical knowledge base and develops powers of analysis, logical thinking and problem solving, as well as a high level of numerical ability.

**Units**

SIT192	Discrete Mathematics
SIT194	Introduction to Mathematical Modelling
SIT291	Mathematical Methods for Information Modelling
SIT292	Linear Algebra for Data Analysis
SIT396	Complex Analysis
SIT399	Optimization Modelling and Decision Analysis

Mathematical Modelling sub-major sequence for E377 Bachelor of Health and Physical Education, D304 Bachelor of Science/Master of Teaching (Secondary), and pipelining D347 Bachelor of Teaching (Secondary)/Bachelor of Arts and D351 Bachelor of Teaching (Science)/Bachelor of Science students:

For students who have completed VCE Mathematical Methods 3 & 4

SIT191	Introduction to Statistics and Data Analysis
SIT192	Discrete Mathematics
SIT194	Introduction to Mathematical Modelling
SIT291	Mathematical Methods for Information Modelling
SIT292	Linear Algebra for Data Analysis
or	
SIT281	Cryptography

For students who have not completed VCE Mathematical Methods 3 & 4

SIT191	Introduction to Statistics and Data Analysis
SIT192	Discrete Mathematics
SIT190	Introductory Mathematical Methods
SLE251	Research Methods and Data Analysis
SIT292	Linear Algebra for Data Analysis
or	
SIT281	Cryptography

## **Natural History – unit set code – MJ-S000069**

*Burwood (Melbourne)*

### **Overview**

Natural history involves the study of plants and animals in their natural environment, and leans more towards observational than experimental study methods. This major sequence emphasises the biological aspects of natural history, and includes studies in zoology, botany and palaeontology.

### **Units**

SLE136	Life On An Evolving Planet
SLE204	Animal Diversity
SLE203	Plant Biology
SLE237	Biogeography (Tri-3)
SLE370	Evolution
SLE395	Palaeobiology

## **Plant Biology – unit set code – MJ-S000070**

*Burwood (Melbourne)*

### **Overview**

This major sequence is ideally suited to those interested in botany and includes studies in plant morphology, identification, reproduction and evolution, as well as vegetation management and biogeography.

### **Units**

SLE132	Biology: Form and Function
SLE203	Plant Biology
SLE237	Biogeography (Tri-3)
SLE310	Pest Plants and Animals
SLE317	Australian Vegetation and Its Management
SLE370	Evolution

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### **Other learning experiences**

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Biological Science

Year	2019 course information
Award granted	Bachelor of Biological Science
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
CRICOS course code	001841F
Deakin course code	S321
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

*The final intake to this course version was in 2018. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Study life in all its forms, from microbes to plants and animals while learning about animal and plant biology, microbiology, genetics, molecular cell biology, biogeography and evolution. This course provides you with the knowledge and skills to tackle the biological challenges of the 21st century, mainly around the environment and climate change, with a focus on experimental design and the Australian biota, and is perfect for people who are passionate about flora and fauna both big and small.

This course qualifies you to become a well-rounded, modern biologist with a knowledge of microbes, plants and animals, and the interactions these have with one another and their environments.

This course provides you with opportunities to gain real-life experience in your chosen profession and to study overseas. The Industry-Based Learning placement will allow you to apply knowledge gained in your course, experience workplace culture and practices, explore career options, and develop a professional network before you graduate.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

You will have the opportunity to be employed in a wide range of areas including primary industries, wildlife biology, the general health and medical industry (hospital scientists, analytical and diagnostic laboratory scientists and research scientists), animal health, quarantine services, environmental consulting, museums, herbaria and the emerging biotechnology industries.

## Participation requirements

You are required to complete units in Trimester 3.

Elective units may be selected that may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply a broad and coherent knowledge of the scientific disciplines of mathematics, physics, chemistry, biology and the environment within Biological Sciences to demonstrate a deep understanding of the nature of biology and it's place and importance in the society. Demonstrate technical knowledge and skills in biological science to test scientific theories and apply them to a range of activities in a professional and/or academic setting. Use hypotheses, laws, facts and theories to investigate, test, analyse, and evaluate scientific data and demonstrate autonomy, well-developed judgement and responsibility to argue about characteristics and aspects of scientific theory in the advancement of biological science.
Communication	Demonstrate listening skills and the ability to use a range of communication skills to accommodate, encourage and answer audience questions. Articulate the boundaries or limits of scientific information, experimental or field data, discuss error, probability, uncertainty, conclusions and arguments. Judge how well to present essential details of scientific procedures, key observations, results and conclusions in a professional manner using appropriate style, language and references including local, national, and international contributions or contexts.
Digital literacy	Apply well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise, create and disseminate biological science literature, information, data and results in a digital world.
Critical thinking	Locate and evaluate scientific information from multiple sources and use scientific methods and frameworks to structure and plan observations, experimentation or fieldwork investigations. Use critical and analytical thinking and judgement to analyse, synthesise and generate an integrated knowledge, formulate hypotheses and test them against evidence-based biological concepts and principles.
Problem solving	Use initiative and creativity in planning, identifying and using multiple approaches to recognise, clarify, construct and solve problems taking into account relevant contextual factors. Advocate scientific methodologies, hypotheses, laws, facts and principles to create solutions to authentic real world problems in biological science.
Self-management	Take personal, professional and social responsibility within changing professional biological science contexts to develop autonomy as learners and evaluate own performance. Work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.

Deakin graduate learning outcomes	Course learning outcomes
Teamwork	Work independently and collaboratively as a team to contribute towards achieving team goals and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in diverse professional, social and cultural contexts.
Global citizenship	Apply scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with others to articulate the place and importance of biology in the local and global community.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Biological Science, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 19 core units
- 5 elective units
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of STP010 Introduction to Work Placements (0 credit-point compulsory unit)
- level 1 – up to 10 credit points
- levels 2 and 3 – at least 14 credit points over both levels
- level 3 – at least 6 credit points

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Work experience

The course includes a compulsory professional practice unit that requires you to undertake at least 80 hours of work experience in a course-related host organisation [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Bachelor of Biomedical Science

Year	2019 course information
Award granted	Bachelor of Biomedical Science
Campus	For students who commenced prior to 2015
Cloud Campus	No
Duration	3 years full-time or part-time equivalent
CRICOS course code	058793E
Deakin course code	S323 (version 2)

*The final intake to this course version was in 2014. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Biomedical Science covers the science underpinning medical applications, from basic biology to specific disease processes. Students gain the theoretical foundation and scientific skills to expand and apply their knowledge of human biology and health, with an emphasis on causes, diagnosis and treatment of disease at the molecular, cellular and system levels. The course gives students relevant and wide-ranging practical experience in the laboratory, ensuring students have both theoretical knowledge and practical skills required for a diverse range of careers or further study. The Bachelor of Biomedical Science is a vibrant, relevant and topical program that provides a flexible, innovative and comprehensive course. Our multidisciplinary approach, and a number of electives at all levels, enable students to learn about their chosen fields of study from both scientific and health perspectives.

The course comprises core areas of study in a broad range of topics including physiology, biochemistry, biology, cell biology, medical microbiology and immunology, molecular and cell biology and molecular and human genetics.

Students will also complete a professional practice unit involving an experiential learning component and have the option to apply for an Industry Based Learning (IBL) placement, which will allow them to apply and consolidate knowledge gained in their course, experience workplace culture and workplaces practices, explore career options and develop a professional network.

Units in the course may include assessment hurdle requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- 12 credit points of core units (you must complete all units);
- 2 credit points of optional core units at level 3 (you must choose the relevant number of units from a prescribed list);
- 3 credit points of restricted electives at level 1 (you must choose the relevant number of elective units from a prescribed list);
- 1 credit point of professional practice at level 3;
- 6 credit points of free electives (you may choose any unit offered in the University, subject to meeting the unit prerequisites, which can be used to undertake a major study in a specialised area (refer to the list of relevant majors below);
- SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit points);
- No more than 10 credit points at level 1;
- At least 6 level 3 units, of which 4 must be course grouped to the Bachelor of Biomedical Science.

## Major sequences

Refer to the details of each major sequence for availability.

Students have the option of using their elective units to complete a major, to develop specialist knowledge in a given area. Recommended major sequences for students in the Bachelor of Biomedical Science include:

- Cell and Molecular Biology
- Environmental Health
- Infection and Immunity
- Medical Biotechnology
- Or any other approved major sequences, subject to meeting the course and unit set requirements.

## Details of major sequences

### **Cell and Molecular Biology – unit set code MJ-S000031**

*Burwood (Melbourne)*

The cell and molecular biology sequence is designed to provide a focused understanding of advanced molecular cell biology, microbiology and human molecular genetics. This sequence will also prepare you to focus and acquire theoretical and practical skills in molecular biology.

SLE111	Cells and Genes *
SLE155	Chemistry for the Professional Sciences *
SLE206	Cell Biology
SLE212	Biochemistry *
SLE222	Biochemical Metabolism *
SLE234	Microbiology *
SLE321	Molecular Biology Techniques
SLE339	Human Genetics and Genomics

\* core unit in the course

### **Environmental Health – unit set code MJ-S000059**

*Burwood (Melbourne)*

With a focus on healthy environments and healthy people, this major is recommended for students interested in working in public health policy, environmental health and related areas.

SLE111	Cells and Genes *
HBS107	Understanding Health
HSN101	Foundations of Food, Nutrition and Health
SLE234	Microbiology *
HSH205	Epidemiology and Biostatistics 1
SLE312	Toxicology
SLE342	Risks to Healthy Environments

\* core unit in the course

## **Infection and Immunity – unit set code MJ-S000058**

### *Waurin Ponds (Geelong)*

The Infection and Immunity Major will explore development and disease at a cellular level, investigate key concepts of immunity and blood cells, and introduce the world of genomics and proteomics. Students will also gain a sound understanding of the key concepts and techniques underpinning clinically-relevant microorganisms and their control.

- SLE111 Cells and Genes \*
- HMM103 Cell Technology
- HMM104 Unit description is currently unavailable
- HMM202 Molecular Diagnostics
- SLE234 Microbiology \*
- HMM303 Emerging Infectious Diseases and Their Control
- SLE334 Medical Microbiology and Immunology \*

\* core unit in the course

## **Medical Biotechnology – unit set code MJ-H000032**

### *Waurin Ponds (Geelong)*

Medical Biotechnology uses cells and cell materials to produce pharmaceutical and diagnostic products that help treat and prevent human diseases. This major provides students with a sound understanding of the core sciences underpinning biotechnology for medical advancement.

- HMM101 Introduction to Medical Biotechnology
- HMM102 Principles of Gene and Genomic Technology
- HMM201 Medical Nanotechnology
- HMM202 Molecular Diagnostics
- HMM302 Innovations in Medical Biotechnology
- HMM305 Cell and Tissue Engineering

## Course overview

Biomedical Science at Deakin covers the science underpinning medical applications, from basic biology to specific disease processes to provide you with a thorough understanding of human biology and health, with an emphasis on the cause, diagnosis and treatment of disease at the molecular, cellular and system levels.

The Bachelor of Biomedical Science is a flexible and topical program, and our multidisciplinary approach enables you to learn about your chosen field of study from both scientific and health perspectives.

Throughout the course you'll gain relevant and wide-ranging practical experience in the laboratory to ensure you graduate with both the theoretical knowledge and practical skills required in the real-world across a diverse range of careers.

Career education has been integrated into the curriculum to enhance your graduate employability through increased awareness of possible career opportunities and career readiness. You will be equipped with valuable transferable skills in communication, critical thinking, problem solving, digital literacy and teamwork, which are critical for success in the job market.

You also have the opportunity to participate in an overseas placement and apply for an Industry-Based Learning experience. Placement opportunities enable you to apply knowledge gained in your course, experience workplace culture and practices, explore career options, and develop a professional network before you graduate.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

As a graduate of Deakin's Bachelor of Biomedical Science you will be able to enter a vast range of health-related industries including medical research, genetic engineering, the pharmaceutical industry, pharmaceutical/medical sales and laboratory technology. You can also advance to honours or postgraduate studies, either in more specialised areas of biomedical science (which will enhance your professional development as a scientist), or in other disciplines (which will complement your scientific training and broaden your career opportunities). Moreover, since this is a STEM (Science, Technology, Engineering and Maths) course, graduates are also highly sought after by a wide range of non-science industries, including consulting and accounting firms, because they have acquired important transferable skills like critical thinking.

## Participation requirements

You may be required to complete units in Trimester 3 depending on your chosen major. Please refer to the Handbook for unit offering patterns.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop foundational knowledge of chemistry, physics, mathematics and biology to demonstrate broad and coherent understanding of molecular, cellular and physiological aspects of human biology and disease. Use scientific process of experimentation from conception of an idea to testing of hypotheses and interpretation of scientific information, and apply procedures in order to explore, experiment and expand knowledge in familiar and unfamiliar situations. Critically evaluate current and historical scientific literature, generate original ideas, and effectively apply theoretical knowledge to the conception of new ideas, interpretation of biomedical information and professional practice.
Communication	Apply well-developed communication skills to illustrate ideas and conceptions clearly and coherently using a variety of tools and techniques that engage scientific and non-scientific audiences. Articulate scientific information in a structured form to describe scientific problems, formulate hypotheses, analyse evidence in order to support or oppose the interpretations of findings and conclusions, in light of the evidence from scientific studies.
Digital literacy	Locate, analyse and interpret information to differentiate established facts from new evidence using scientific tools in a digital world to formulate an opinion. Evaluate information using evidence from a range of reliable sources to establish scientific knowledge, recognise ambiguity and disseminate information.

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	Use abstract, analytical and logical reasoning to critically evaluate scientific arguments and approaches. Apply critical reasoning in a variety of situations to scope, interpret and structure investigations to develop an in-depth knowledge for professional biomedical practice.
Problem solving	Identify scientific problems and use structured approaches and experimental strategies to formulate and propose solutions by taking into account relevant discipline and contextual factors. Use judgement to convince scientific and non-scientific audience, in the use of strategies to generate solutions to real world problems.
Self-management	Evaluate own knowledge and skills using frameworks of reflection and take responsibility for learning and performance. Work responsibly and safely in scientific and professional environments to enrich the ideas of others by sharing learning experiences.
Teamwork	Work effectively as a team member, assuming various roles and utilising effective teamwork skills in order to achieve goals.
Global citizenship	Apply ethical practice in professional situations to demonstrate responsibility as practitioners when working with people from diverse cultures and communities. Identify and prioritise local, national and global issues and concerns and contribute towards solving real world problems from the context of biomedical science.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Biomedical Science, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 15 credit points of core units (which includes a compulsory professional practice unit at level 3);
- At least one 6 credit point approved major sequence from the list below;
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0-credit-point compulsory unit);
- Completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit);
- Level 1 – up to 10 credit points;
- Level 3 – at least 6 credit points.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Major sequences

Refer to the details of each major sequence for availability.

Students must complete one of the following major sequences:

- Environmental Health
- Infection and Immunity
- Medical Biotechnology
- Medical Genomics
- Molecular Life Sciences
- Pharmaceutical Science

## Course structure

### Core

You must complete all units below:

#### Level 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SLE010	Laboratory and Fieldwork Safety Induction Program (0 credit points)
SLE115	Essential Skills in Bioscience
SLE111	Cells and Genes
SLE133	Chemistry in Our World <sup>^</sup>

plus one elective/major unit

##### Trimester 2

SLE155	Chemistry for the Professional Sciences
SLE132	Biology: Form and Function
SLE123	Physics for the Life Sciences

plus one elective/major unit

<sup>^</sup> Note: Students who have completed Year 12 Chemistry or equivalent may choose to replace SLE133 Chemistry in Our World with an elective unit. Molecular science is integral to modern biomedical science. For this reason, knowledge of chemistry, biochemistry and other fundamental sciences is important for all students in the Bachelor of Biomedical Science course. Students who have a weak or no knowledge of VCE Chemistry Units 3 and 4, must study SLE133. Students, who have a strong knowledge of VCE Chemistry Units 3 and 4, may choose an elective instead of SLE133, and proceed directly to SLE155. Alternatively, students who have a strong knowledge of VCE Chemistry Units 3 and 4, may choose to study SLE133 in order to strengthen and consolidate their chemistry skills and understanding.

#### Level 2

##### Trimester 1

SLE212	Biochemistry
SLE251	Research Methods and Data Analysis
SLE234	Microbiology

plus one elective/major unit

##### Trimester 2

STP010	Introduction to Work Placements (0 credit points)
SLE254	Genetics and Genomics
SLE221	Systems Physiology
SLE206	Cell Biology +

plus one elective/major unit

+ SLE206 is offered in Trimester 2 at Burwood (Melbourne) and Trimester 3 at Waurm Ponds (Geelong)

**Level 3****Trimester 1**

SLE323 Advanced Topics in Biomedical Science

plus three elective/major units

**Trimester 2**

SLE334 Medical Microbiology and Immunology

SLE346 Molecular Basis of Disease

SLE390 Professional Practice in Bioscience #

plus one elective/major unit

# Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

**Electives**

Select from a range of electives offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

It is important to note that some elective units may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

**Recommended elective units:**

ASS101	Peoples of the World
HBS109	Human Structure and Function
HBS110	Health Behaviour
HMM203	Human Anatomy
HPS111	Psychology A: Fundamentals of Human Behaviour
HPS121	Psychology B: Individual and Social Development
HPS203	The Human Mind
HPS310	Brain, Biology and Behaviour
HSE102	Functional Human Anatomy
HSN211	Nutritional Physiology
SIT190	Introductory Mathematical Methods
SIT199	Applied Algebra and Statistics
SLE103	Ecology and the Environment
SLE209	History and Philosophy of Science
SLE224	Animal Behaviour
SLE225	Global Environmental Placement
SLE314	Research Project

**Work experience**

You'll gain practical experience by completing a two week placement at a course-related host organisation to provide you with opportunities for workplace visits, field trips, industry learning and to establish valuable networks – giving you better insight into your possible career outcomes.

You'll also have the opportunity to undertake a discipline-specific industry placement as part of your course. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Details of major sequences

### **Environmental Health – unit set code – MJ-S000059**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

#### Overview

Environmental Health deals with many factors in our natural and built environment that affects human health. You will learn how microorganisms and toxic substances interact with biological systems and how this leads to clinical effects. Risks to healthy environments in urban, industrial, agricultural and/or natural settings will be evaluated using epidemiology, toxicology and statistics. You will also learn about risk assessment and risk management through policy, legislation, and integration of risk management with environmental management principles. This major is recommended for students interested in working in public health policy, environmental health and related areas.

#### Units

HBS107	Understanding Health
HSN101	Foundations of Food, Nutrition and Health
SLE234	Microbiology *
HSH205	Epidemiology and Biostatistics 1
SLE312	Toxicology
SLE342	Risks to Healthy Environments

\* Prerequisite unit applies (SLE111 Cells and Genes – core to the course)

### **Infection and Immunity – unit set code – MJ-S000058**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

#### Overview

The Infection and Immunity major will explore development and disease at a cellular level, investigate key concepts of immunity and blood cells, and introduce the world of genomics and proteomics. Students will gain a sound understanding of the key concepts and techniques underpinning clinically-relevant microorganisms and their control, and through the use of epidemiology and biostatistics identify prevalent diseases in relationship to specific populations. You will also learn current laboratory techniques engaged in molecular diagnostics for the analytical identification of infectious pathogens to develop therapeutic applications.

#### Units

HMM103	Cell Technology
HMM204	Haematology and Immunology
HMM202	Molecular Diagnostics
HSH205	Epidemiology and Biostatistics 1
HMM303	Emerging Infectious Diseases and Their Control
HMM304	Therapeutic Development

### **Medical Biotechnology – unit set code – MJ-H000032**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

#### Overview

Medical Biotechnology uses living cells and cell materials to produce pharmaceutical and diagnostic products that help treat and prevent human diseases. This major provides you with a sound understanding of the core sciences underpinning biotechnology for medical advancement. You will be taken on a journey from the development of the first medical treatments through to regenerative medicine and cutting edge diagnostic and therapeutic deliver systems such as nanotechnology and the associated social and ethical issues surrounding their use. You will also learn the business of medical biotechnology including risk management, funding and regulatory frameworks relative to the Medical Biotechnology industry.

## Units

- HMM101 Introduction to Medical Biotechnology
- HMM102 Principles of Gene and Genomic Technology
- HMM201 Medical Nanotechnology
- HMM202 Molecular Diagnostics
- HMM302 Innovations in Medical Biotechnology
- HMM305 Cell and Tissue Engineering

### **Molecular Life Sciences – unit set code – MJ-S000071**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

#### Overview

Molecular Life Sciences aim to understand and describe the biology of life at the level of atoms and molecules in the context of cells, tissues and entire organisms. It is based on the chemistry of life and the physical laws that govern it. Throughout this major you will study topics including biochemistry, microbiology, physiology and genetics. Fundamental research in Molecular Life Sciences underpins all efforts to develop new drugs and treatments. This major will enable you to acquire an advanced understanding of chemical, physiological and genetic processes that determine health and disease at the molecular level. In addition, technical skills relevant for biomedical research will be obtained. This major prepares graduates for a successful career in basic and applied research, future employment in the pharmaceutical and biomedical industries, and the wider health care sector.

#### Units

- SLE211 Principles of Physiology
- SLE222 Biochemical Metabolism
- SLE321 Molecular Biology Techniques ~
- SLE339 Human Genetics and Genomics ~
- HMM301 Principles of Pharmacology
- SLE312 Toxicology

~ Available at the Geelong Waurn Ponds Campus from 2020

### **Medical Genomics – unit set code – MJ-S000076**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

#### Overview

The Medical Genomics major will examine core genomics areas, including medical and human genomics, comparative genomics, microbial and forensic genomics, biotechnology (drug discovery) and phylogenomics. You will gain a sound understanding of associated methodologies including Next Generation Sequencing, high throughput genotyping, metagenomics, small RNA and transcriptome analysis. You will acquire quantitative and bioinformatics skills required for genomics research and big data analysis and will apply the bioinformatics concepts and methods, programs and pipelines required to support contemporary genomics research and big data analysis and interpretation. The impact of personalised medicine and ethical and social issues related to the use of genomics in the context of human health and diversity, biomedical research and biotechnology will also be discussed.

#### Units

- HMM102 Principles of Gene and Genomic Technology
- HSH205 Epidemiology and Biostatistics 1
- HMM202 Molecular Diagnostics
- SLE340 Genomes and Bioinformatics \*
- SLE321 Molecular Biology Techniques ~
- SLE339 Human Genetics and Genomics ~

~ Available at the Geelong Waurn Ponds Campus from 2020

\* Available at the Melbourne Burwood Campus from 2020

## **Pharmaceutical Science – unit set code – MJ-S000082**

*Burwood (Melbourne), Waurn Ponds (Geelong)*

### **Overview**

Pharmaceutical Science aims at developing new medicines for the treatment of disease. This major covers topics including the chemistry, biology and technology of medicines and is ideally suited for students who have a strong interest in chemistry, drug action and discovery. You will learn how the chemistry of life determines the biology of cells, tissues and organisms, and explore the drug discovery process from the identification of suitable drug targets to the use of chemistry to isolate, design and apply molecules in the treatment of disease. Pharmaceutical Science underlies the business of a multi-billion dollar industry, which provides a huge range of employment opportunities. This major prepares graduates for a successful career in basic and applied research, future employment in the pharmaceutical and biomedical industries, and the wider health care sector.

### **Units**

SLE210	Chemistry the Enabling Science
SLE214	Organic Chemistry
SLE318	Synthetic and Medicinal Chemistry
HMM301	Principles of Pharmacology
HMM304	Therapeutic Development

Select one unit from the following:

SLE222	Biochemical Metabolism
SLE235	Chemical Systems

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### **Other learning experiences**

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Forensic Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Forensic Science
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurin Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full time or part time equivalent
<i>CRICOS course code</i>	073106G
<i>Deakin course code</i>	S324
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Study forensic science at Deakin and you'll get formal training across the full scope of modern forensic science, acquiring skills and authentic experiences from 'crime scene to court' by spending time in our unique crime scene training facility. Deakin is the first university in Australia, and the only university in the Asia-Pacific region, to offer a professionally-accredited forensic science course.

Deakin's Bachelor of Forensic Science combines studies in biology, chemistry, biochemical and chemical analysis, statistical analysis, and molecular biology. You'll learn how to apply forensic analysis including chemical, biological and physical techniques while also learning about the Australian legal system, including how law is developed, criminal and civil law, and the laws of evidence.

You'll cover a wide range of disciplines, including toxicology, arson and explosives investigations, analysis of illicit drugs, DNA analysis, bloodstain pattern analysis and entomology, and also undertake studies in criminology. Forensic study will focus on the examination, interpretation and presentation of evidence, and include courtroom presentations.

The course has extensive industry links with local and Australian forensic organisations, and features guest speakers from leading forensic organisations.

Students of this course are eligible to apply for membership of the Australian and New Zealand Forensic Science Society (ANZFSS). Graduates of the course can expect to find work in areas such as forensics, insurance investigation, risk analysis, research science, in government institutions and within chemical, food and pharmaceutical industries.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Bachelor of Forensic Science has been professionally accredited by the Chartered Society of Forensic Sciences. Graduates of this course are encouraged to apply for membership of the Australian and New Zealand Forensic Science Society (ANZFSS).

## Career opportunities

As a graduate of the Bachelor of Forensic Science, career opportunities exist in forensics laboratories, insurance investigation, risk analysis, research science, policing, in government institutions and in chemical, biological food and pharmaceutical industries.

## Participation requirements

You may be required to complete units in Trimester 3 depending on your chosen major. Please refer to the Handbook for unit offering patterns.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate broad and coherent knowledge of forensic disciplines including forensic chemistry, forensic biology and the science in the crime scene to the courtroom. Apply analysis and interpretation techniques in order to deduce and test hypothesis in a variety of professional contexts. Explain and present the strengths of scientific results and associated limitations in professional environments.
Communication	Use appropriate terminology and standard operating procedures to note take, document and present a variety of accumulated information. Judge how well to present essential details of scientific procedures, key observations, results and conclusions in a professional manner using appropriate style, language and references including local, national, international contributions and contexts. Converse with scientific and non-scientific audiences using appropriate language and methods of communication to clearly articulate scientific procedures and outcomes.
Digital literacy	Apply well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise and disseminate scientific literature, information, data and results.
Critical thinking	Interpret and evaluate information from a number of areas including a body of knowledge from the scholarly literature, laboratory data and other individuals to place the information in a scientific context. Use critical and analytical thinking and judgement to analyse, synthesise and generate an integrated knowledge, and to formulate hypotheses and test them against evidence-based scientific concepts and principles.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Take into account relevant contextual factors to approach problems and make informed decisions that will assist in finding appropriate solutions to problems in forensic science. Advocate scientific methodologies, hypotheses, laws, facts and principles to create solutions to real world problems and forensic scenarios.
Self-management	Take personal, professional and social responsibility within changing professional science contexts to develop autonomy as learners and evaluate own performance. Work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.
Teamwork	Work independently and collaboratively in diverse roles as members of multidisciplinary teams to contribute towards achieving team goals and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in professional, social and cultural contexts.
Global citizenship	Adopt and value multidisciplinary knowledge and perspectives for evaluating, integrating and incorporating strategies and solutions in scoping, planning and managing alternative solutions from local to global forensic problems.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Forensic Science, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 11 core units
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit point compulsory unit)
- Completion of STP010 Introduction to Work Placements (0 credit point compulsory unit)
- no more than 10 credit points at level 1
- at least 6 credit points at level 3 (including a minimum of 4 Science units)
- Completion of a major sequence in either: Forensic Chemistry or Forensic Biology.

With careful planning, students may use up to eight of their remaining electives on units offered outside the Faculty such as units in Criminology, for example.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Major sequences

Refer to the details of each major sequence for availability.

- Forensic Biology
- Forensic Chemistry

## Course structure

### Core

#### Level 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SLE010	Laboratory and Fieldwork Safety Induction Program (0 credit point)
SLE111	Cells and Genes
SLE133	Chemistry in Our World
SIT191	Introduction to Statistics and Data Analysis

##### Trimester 2

SLE132	Biology: Form and Function
SLE155	Chemistry for the Professional Sciences
SLE112	Fundamentals of Forensic Science
ACR102	Introducing Crime and Criminal Justice
STP010	Introduction to Work Placements (0 credit point)

#### Level 2

##### Trimester 1

SLE212	Biochemistry
SLE213	Introduction to Spectroscopic Principles

##### Trimester 2

SLE208	Forensic Biology #
--------	--------------------

#### Level 3

##### Trimester 2

SLE313	Forensic Analysis and Interpretation
--------	--------------------------------------

# Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

### Electives

Select from a range of electives offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

It is important to note that some elective units may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

### Work experience

This course aims to provide students with a holistic experience of their role as forensic analysts. You will have the opportunity to visit a court, a crime scene and participate in a 'moot court' which allows students to experience a simulated courtroom environment.

## Details of major sequences

### **Forensic Biology – unit set code – MJ-S000049**

*Waurm Ponds (Geelong)*

#### Overview

The forensic biology major aims to provide you with the specific biological skills that are very important in the forensic science workplace. These biological-based skills complement the generic forensic science attributes developed in the core units of the course. Study in this area may lead to a career in forensic laboratories, entomology, human anatomy, research science, policing, and biological and food industries.

Students must complete a major sequence in either Forensic Biology or Forensic Chemistry in addition to the core unit requirements.

#### Units

SLE211	Principles of Physiology
SLE212	Biochemistry *
SLE221	Systems Physiology
SLE254	Genetics and Genomics
SLE356	Advanced Topics in Forensic Biology (Tri-3)
SLE340	Genomes and Bioinformatics ^

\* Already core units in the degree.

^ Available at the Melbourne Burwood Campus from 2020

### **Forensic Chemistry – unit set code – MJ-SU00015**

*Waurm Ponds (Geelong)*

#### Overview

The forensic chemistry major aims to provide you with the specific chemistry skills that are very important in the forensic science workplace. These chemically-based skills complement the generic forensic science attributes developed in the core units of the course. Study in this area may lead to a career in forensic laboratories, toxicology, drug detection, chemical detection, research science, policing, and chemical, food and pharmaceutical industries.

Students must complete a major sequence in either Forensic Biology or Forensic Chemistry in addition to the core unit requirements.

#### Units

SLE210	Chemistry the Enabling Science
SLE214	Organic Chemistry
SLE229	Introduction to Separation Science
SLE316	Analytical Chemistry
SLE318	Synthetic and Medicinal Chemistry
SLE312	Toxicology

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Information Technology

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Information Technology
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne), Waurn Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	053993D
<i>Deakin course code</i>	S326
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

The Bachelor of Information Technology provides you with the contemporary knowledge, skills and experience required for a successful career as an IT professional capable of managing information technology, digital proficiency and technological transformations in all sectors of the community.

In addition to acquiring a core set of IT skills that are relevant in almost every industry, this diverse degree provides you with the opportunity to choose from a wide range of IT specialisations according to your interests and career aspirations. We offer a full range of IT disciplines from the technical (software development and cloud computing), to the creative (creative technologies and games design).

You'll cover areas such as cyber security, application development, computer games, gaming, virtual and augmented reality, creative technologies and cloud computing and gain experience constructing IT solutions to real-world problems. You also have the flexibility to diversify your studies and explore other areas of interest through elective units in IT and/or complementary study areas.

This course includes an internship unit that provides professional work experience with an approved host organisation. Students also have the opportunity to gain business skills working on real-world products. The inclusion of a compulsory placement and industry-linked projects will provide you with practical experience in IT related organisations.

IT is at the heart of innovation and productivity. It shapes the way we live, work, learn, communicate, socialise and entertain ourselves. It's no surprise then, that IT graduates are in high demand globally, and with high entry-level salaries on offer an IT degree can set you up for a satisfying and rewarding career. Possible roles include network officer or manager, IT security officer or manager, object-oriented or procedural programmer, database or web designer, manager, consultant, or system analyst.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Bachelor of Information Technology is professionally accredited with the Australian Computer Society (ACS).

## Career opportunities

As an IT graduate, you may find employment in roles such as network officer or manager, IT security officer or manager, object-oriented and procedural programmer, database and web designer and manager, project manager, consultant or system analyst. Alternatively, you may apply your skills in a non-traditional field and explore employment opportunities in fields such as Healthcare, Education, Government or Business.

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Develop a broad, coherent knowledge of the IT discipline, including its dynamic environment, with detailed knowledge of project management principles, and in depth knowledge in the area of the chosen major.</p> <p>Design, develop and implement IT systems and software, and associated policies and procedures for optimal use and apply industry standards and best practice in one or more specialised areas of IT.</p> <p>Apply an in-depth knowledge of the roles of IT in the context of modern organisations and society and propose enhancements.</p>
Communication	Communicate in an IT context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Utilise a range of digital technologies and information sources to discover, analyse, evaluate, select, process and disseminate both technical and non-technical information.
Critical thinking	Evaluate specialist IT information using critical and analytical thinking, technical skills and well-developed judgement to identify problems, analyse user requirements and propose solutions.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Apply theoretical constructs and skills and critical analysis to real-world and ill-defined problems and develop innovative IT solutions.
Self-management	Apply knowledge and skills to new situations in professional practice and/or further learning in the field of IT with adaptability, autonomy, responsibility and personal accountability for actions as a practitioner and a learner.  Apply understanding of reflective practice and self-critique skills within broad parameters to plan for their own future continuing professional development.
Teamwork	Apply the principles of effective teamwork as a member of diverse IT teams to demonstrate responsibility for own learning within broad parameters.
Global citizenship	Apply professional and ethical standards and accountability for own learning to the development, design, construction and management of localised IT solutions.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Information Technology, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 11 core IT units (which includes a compulsory internship unit)
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of SIT010 Safety Induction Program (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- at least one IT Major Sequence
- 7 electives (which may be used to complete a second major study)
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels
- level 3 – minimum of 6 credit points of which at least 4 must be SIT units

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Major sequences

Refer to the details of each major sequence for availability.

Students must complete at least one major from the following areas:

- Application Development
- Cloud Computing
- Creative Technologies
- Game Development
- Cyber Security
- Virtual and Augmented Reality

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SIT010	Safety Induction Program (0 credit points)
STP010	Introduction to Work Placements (0 credit points)
SIT102	Introduction to Programming
SIT124	Exploring I.T.
SIT103	Data and Information Management
SIT105	Thinking Technology and Design
SIT202	Networks and Communications
SIT223	Professional Practice in Information Technology
SIT216	User Centred Design
SIT302	Project Delivery
SIT374	Project Design ~
SIT317	Enterprise, Entrepreneurship and Innovation #

Plus one unit in:

SIT306	IT Placement ^
or	
STP301	Industry Based Learning

^ offered in trimester 1, trimester 2, Trimester 3

# available from 2020

~ Note: Students are expected to undertake SIT374 and SIT302 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT374 and SIT302 consecutively.

Students should consult their enrolment officer to ensure their course plan meets the course rules detailed above.

### Electives

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

## Work experience

This course includes a compulsory work placement where you will be required to undertake a minimum of 100 hours in industry, providing professional work experience with an approved host organisation. Alternatively, high achieving students may have the opportunity to undertake an extended full-time paid industry-based learning placement between 6–12 weeks (conditions apply, please refer to [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).)

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Details of major sequences

### **Application Development – unit set code – MJ-S000085**

*Burwood (Melbourne), Cloud (online)*

#### Overview

Gain the knowledge to thrive in this fast-growing field. You'll master skills in planning, developing and managing software projects to build a wide range of profitable web apps, desktop apps, mobile apps and business apps.

#### Units

SIT120	Introduction to Responsive Web Apps
SIT122	Robotics Studio
SIT221	Data Structures and Algorithms
SIT232	Object-Oriented Development
SIT305	Android and iOS Mobile Programming
SIT313	Developing Client-Server Web Applications

**Creative Technologies – unit set code – MJ-S000086***Burwood (Melbourne), Cloud (online)***Overview**

Computing technologies are integrated seamlessly into products that we use on a daily basis and this trend will accelerate in the future. Creative technologists design these products of the future which creatively and seamlessly combine innovative computing concepts with the needs and opportunities associated with a 21st century lifestyle. The Creative Technologies major provides you with the opportunity to combine your creative talents with your technical knowledge.

**Units**

SIT122	Robotics Studio
SIT162	Introduction to Creative Technologies
SIT254	Game Design
SIT264	Authoring of Interactive Media
SIT361	Interactive Technology Application
SIT352	Creative Production *

\* available from 2020

**Cloud Computing – unit set code – MJ-S000063***Burwood (Melbourne), Waurn Ponds (Geelong)***Overview**

Students undertaking a study of this major will learn the concepts and technologies used in Cloud Computing including virtualisation, enterprise networks, and system security, and develop the expertise required to construct software solutions using public and private cloud infrastructure. Students will also complete a study of the Cisco Academy's CCNA Routing and switching curriculum to learn the skills needed to construct and maintain network infrastructure to effectively support organisational needs in networks and clouds.

**Units**

SIT113	Cloud Computing and Virtualisation
SIT232	Object-Oriented Development
SIT272	Enterprise Network Construction
SIT277	Enterprise Network Management
SIT322	Cloud Systems
SIT323	Cloud Application Development

**Game Development – unit set code – MJ-S000042***Burwood (Melbourne), Cloud (online)***Overview**

Video games are a common activity in today's society, being used for both entertainment and serious purposes. Using the latest games engines, you will learn how to implement game implementations for both entertainment and serious purposes. You will develop video games ranging in complexity from small interactive apps to larger PC- and mobile based systems, applicable for a wide range of audience types.

**Units**

SIT151	Game Fundamentals
SIT190	Introductory Mathematical Methods **
SIT192	Discrete Mathematics
SIT232	Object-Oriented Development
SIT255	Game Development Patterns
SIT352	Creative Production *
SIT383	Augmented Reality Systems

\* available from 2020

\*\* NOTE: students who have successfully completed Mathematical Methods 3 and 4 or equivalent may choose to replace SIT190 with an elective unit

**Cyber Security – unit set code – MJ-S000041***Burwood (Melbourne), Cloud (online), Waurin Ponds (Geelong)***Overview**

Gain practical and theoretical knowledge in this critical aspect of IT, with an emphasis on understanding and assessing the need for IT security in a working environment, knowledge of the security solutions available, as well as understanding the business, ethical and legal implications of risk management. You will learn in a leading-edge study environment and graduate as a qualified IT professional.

**Units**

SIT182	Real World Practices for Cyber Security
SIT192	Discrete Mathematics
SIT281	Cryptography
SIT284	Cyber Security Management
SIT382	System Security
SIT379	Ethical Hacking

**Virtual and Augmented Reality – unit set code – MJ-S000084***Burwood (Melbourne)***Overview**

Virtual and augmented reality technologies are revolutionizing business processes, disrupting the way companies work with complex data sets, and enhancing educational and training practices. They contribute to novel therapies and treatments, allow access to opportunities despite physical and geographical restrictions and have redefined the way we represent and interact with digital media whether it be our holiday souvenir snapshots or the latest interactive gaming experience.

**Units**

SIT162	Introduction to Creative Technologies
SIT183	Application and Design of Virtual and Augmented Reality Systems
SIT253	Audio and Visual Production
SIT283	Development for Virtual Reality
SIT352	Creative Production <sup>^</sup>
SIT383	Augmented Reality Systems

<sup>^</sup> available from 2020

**Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

**Other learning experiences**

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Information Technology (Computer Science and Software Development)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Information Technology (Computer Science and Software Development)
<i>Campus</i>	For students who commenced prior to 2016
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	049956K
<i>Deakin course code</i>	S327

*The final intake to this course version was in 2015. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Information Technology (Computer Science and Software Development) will provide you with an understanding of the technology on which systems are built, as well as how to develop software systems and applications, and form an environment to acquire skills needed for software development.

The course supports students who wish to master software development in the industry and reasoning and data environments.

You will learn to develop, implement and maintain information systems, databases and computer networks of considerable size and complexity in commercial, industrial or administrative environments. You will also be well-prepared to pursue research and development with the computer science foundation necessary for the development of new software products such as those found on modern smart phones and smart appliances.

The course is structured so that the intellectual material will remain current for a number of years despite the fact that computer languages and technology change rapidly.

An honours year is available for high-achieving students upon completion of this degree.

Units in the course may include assessment hurdle requirements.

## Professional recognition

The Bachelor of Information Technology (Computer Science and Software Development) is professionally accredited with the Australian Computer Society (ACS).

## Career opportunities

You may find employment as a software developer, software analyst, software engineer, database administrator, web designer, network and systems manager, component integrator, tester, system analyst, and IT consultant. You will also be suited to employment in areas of systems programming, software development, data communications, management, maintenance of computer systems and development of information systems.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Information Technology's website [deakin.edu.au/information-technology](http://deakin.edu.au/information-technology), or by telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- 16 core units
- 8 elective units
- Completion of SIT010 Safety Induction Program (0 credit-point compulsory unit)
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels
- level 3 – minimum of 6 credit points of which at least 4 must be SIT Course Grouped units

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Bachelor of Information Technology (Interactive Media)

<i>Award granted</i>	Bachelor of Information Technology (Interactive Media)
<i>Campus</i>	For students who commenced prior to 2013
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	075360M
<i>Deakin course code</i>	S331

*The final intake to this course version was in 2012. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Information Technology (Interactive Media) will enable you to design and author interactive and multimedia information integrating images, video, sound, animation and text to create electronic products for a range of environments. The focus of this course is on the practical application of skills and concepts. Graduates are multi-skilled people with a broad understanding of information technology with specialist expertise in the design and development of web systems, DVD authoring and information delivery.

The course will introduce you to fundamental principles, together with tools and techniques needed to design interactive and multimedia information and deploy media systems. The course emphasises state-of-the-art standards and engages in significant hands-on experience with leading authoring packages. You may also take an elective stream in the area of animation, through the School of Communication and Creative Arts.

The course has been devised to provide a creative complement to the information technology-focused units in this course.

An honours year is available for high-achieving students upon completion of this degree.

Units in the course may include assessment hurdle requirements.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Information Technology's website [deakin.edu.au/information-technology](http://deakin.edu.au/information-technology), or by telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- 16 core units
- 8 elective units
- Completion of SIT010 Safety Induction Program (0 credit-point compulsory unit)
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels
- level 3 – minimum of 6 credit points of which at least 4 must be SIT Course Grouped units

# Bachelor of Information Technology (Games Design and Development)

<i>Award granted</i>	Bachelor of Information Technology (Games Design and Development)
<i>Campus</i>	For students who commenced prior to 2014
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	051580G
<i>Deakin course code</i>	S333 (version 2)

*The final intake to this course version was in 2013. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Games Design and Development course provides you with the skills and knowledge to thrive in this dynamic and fast-growing field.

This course enhances your hands-on ability to design and develop computer games ranging in complexity from small interactive apps, larger PC and console based systems and massive multiplayer systems. Through this course you develop an understanding and appreciation for concepts in game design and software technology relevant to games. Topics include game programming, real-time computer graphics and rendering, artificial intelligence, networked games, audio/visual systems, game simulation and modelling, human computer interaction, game production, graphic design, music and sound effects, game theory, art and design principles for games, system analysis and design, software engineering, object-oriented programming, games and society and scientific concepts from computer science and related fields.

An honours year is available for high-achieving students upon completion of this degree.

Units in the course may include assessment hurdle requirements.

## Professional recognition

The Bachelor of Information Technology (Games Design and Development) is professionally accredited with the Australian Computer Society (ACS).

## Career opportunities

You will be qualified to work in a wide range of IT jobs, including game designer, game developer or game programmer, project manager, component integrator, multimedia system designer and developer or consultant.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Information Technology's website [deakin.edu.au/information-technology](http://deakin.edu.au/information-technology), or by telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- 17 core units
- 7 elective units
- Completion of SIT010 Safety Induction Program (0 credit-point compulsory unit)
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels
- level 3 – minimum of 6 credit points of which at least 4 must be SIT Course Grouped units

# Bachelor of Games Design and Development

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Games Design and Development
<i>Campus</i>	For students who commenced prior to 2018
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	083694M
<i>Deakin course code</i>	S333 (version 3)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

*The final intake to this course version was in 2017. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Games Design and Development provides you with the knowledge, skills and competencies required to integrate the creative abilities of the game designer with the technical mastery of the game developer. As a graduate you will be capable of producing sophisticated computer games and responsive and appealing simulations, online and mobile applications and virtual reality environments.

You'll learn how to design, build and manage computer game projects using cutting edge industry standard platforms, engines and programming languages to develop computer games ranging in complexity from small interactive apps, larger desktop systems, as well as massive multiplayer systems. You'll also have access to dynamic and interactive gaming studio environments that enable you to collaborate in multidisciplinary teams to find workable solutions to problems in game development, provide creative input to game design and turn your love of gaming into a professional career. You'll cover topics including design techniques and processes for games and interactive applications, software development and programming for games, real-time computer graphics and rendering, artificial intelligence, networked and multiplayer games, creation of audio and video assets, and game production strategies.

As a graduate, you'll be equipped with the skills to seek employment across the full scope of the gaming industry, from the design of the initial concepts through to development, programming and production of computer games. You may also find employment in project management, component integration, online and mobile multimedia systems design and consultancy, and will work collaboratively with artists, animators, audio specialists, producers and marketing professionals.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Bachelor of Games Design and Development is professionally accredited with the Australian Computer Society (ACS).

## Career opportunities

You will be qualified to work in a wide range of IT jobs, including game designer, game developer or game programmer, project manager, component integrator, multimedia system designer and developer or consultant.

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Develop a broad, coherent knowledge of the IT discipline, including its dynamic environment, with detailed knowledge of project management principles and in depth knowledge in Games Design and Development.</p> <p>Employ accepted industry standard practices and procedures for managing the design and development of games and associated areas of IT.</p> <p>Design and implement solutions using appropriate software systems and tools to solve problems in the design and development of computer games.</p> <p>Integrate creative and technical skills in the development of games.</p> <p>Create, critique and contrast game design proposals to assess their suitability as interactive and playable games.</p>
Communication	<p>Communicate in an IT context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.</p> <p>Use the formal language of game development technologies to describe the relationships within the components and structures of games.</p>
Digital literacy	Utilise a range of digital technologies and information sources to discover, analyse, evaluate, select, process and disseminate both technical and non-technical information
Critical thinking	Evaluate specialist IT information relating to Games design and development using critical and analytical thinking, technical skills and well developed judgement to identify problems, analyse user requirements and propose solutions.
Problem solving	Apply theoretical constructs and skills and critical analysis to real-world and ill-defined problems and develop innovative IT solutions.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	<p>Apply knowledge and skills to new situations in professional practice and/or further learning in the field of IT with adaptability, autonomy, responsibility and personal accountability for actions as a practitioner and a learner.</p> <p>Apply understanding of reflective practice and self critique skills within broad parameters to plan for their own future continuing professional development.</p>
Teamwork	Apply the principles of effective team work as a member of diverse IT teams to demonstrate responsibility for own learning within broad parameters.
Global citizenship	Apply professional and ethical standards and accountability for own learning to the development, design, construction and management of localised IT solutions.

Approved by Faculty Board 27 July 2017

## Course rules

To complete the Bachelor of Games Design and Development, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

- 18\* core units (which includes a compulsory internship unit – SIT306 IT Internship or STP301 Industry Based Learning)
- 6 elective units
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of SIT010 Safety Induction Program (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels
- level 3 – minimum of 6 credit points of which at least 4 must be SIT Course Grouped units

## Work experience

You will have an opportunity to undertake a discipline-specific Industry-Based Learning placement as part of your course. This will provide you with the opportunity to apply and consolidate what you are learning in your course, experience workplace culture and workplace practices, explore career options and develop a professional network before you graduate. Please refer to [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

# Bachelor of Information Technology (I.T. Security)

<i>Award granted</i>	Bachelor of Information Technology (I.T. Security)
<i>Campus</i>	For students who commenced prior to 2009
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	055288B
<i>Deakin course code</i>	S334 (version 2)

*The final intake to this course version was in 2008. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor IT Security will provide you with a sound knowledge and understanding of general issues, concepts and practices in IT security and in the relevant fields.

You will learn in an active and dedicated study environment, and graduate as a qualified IT professional who is eminently employable. You will gain practical and theoretical knowledge in this critical aspect of IT with an emphasis on understanding and assessing the need for IT security in a working environment, knowledge of the security strategies and solutions available – what they are and how they work – and understanding the business, ethical, social and legal implications of risk management. There is also an emphasis on identification analysis, investigation, problem-solving, development and technical skills related to system vulnerabilities and weakness against social engineering. You will also be encouraged to develop generic skills, enabling you to be a competent employee.

An honours year is available for high-achieving students upon completion of this degree.

Units in the course may include assessment hurdle requirements.

## Professional recognition

The Bachelor of Information Technology (IT Security) is professionally accredited with the Australian Computer Society (ACS).

## Career opportunities

Career options include work as a security analyst, project manager, security system manager, cryptographer, business analyst, consultant, security system developer or programmer, information security auditor, law enforcement personnel or IT security engineer.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Information Technology's website [deakin.edu.au/information-technology](http://deakin.edu.au/information-technology), or by telephone 03 9244 6699.

## Combined courses

The Bachelor of Information Technology (IT Security) is also available as a combined course with Criminology, please refer to D380 Bachelor of Criminology/Bachelor of Information Technology (IT Security).

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course overview

Learn about digital forensics, watermarking techniques, encryption and digital rights management and gain the technical skills required to investigate and combat cyber-crime and cyber-terrorism. Deakin's Bachelor of IT Security gives you a solid understanding of the concepts and practices associated with IT and cyber security.

The digital world is central to the way we live, work, communicate and conduct business. Now more than ever, it's vital that the data and systems providing these services be safeguarded by ethical professionals with strong cyber security literacy and technical skills.

This course will teach you how to identify, diagnose, analyse and manage the challenges of Cyber security. You'll cover areas such as computer crime and digital forensics, evaluating software for security vulnerabilities, designing secure databases, securing operating systems, assessing and reinforcing the security of websites, integrating security requirements into new developments, designing secure network architectures, performing risk assessments and responding to cyber security incidents.

Classes use specialised software to enable practice of real world cyber-attack and response scenarios. You'll consequently get the chance to reflect on the need for cyber security in a working environment, and the various solutions that might apply.

The degree focuses on technical elements and sets you up with strong skills in critical thinking and problem solving. You'll be able to apply your learning in the workplace, and capably deal with imminent threats and challenges from the digital space where interconnected vehicles, drones, smart home gadgets, mobile and wearable devices, and health-kits prosper.

The course will help you develop strong interpersonal skills and a capacity for team-work. You'll also build your written and oral communications skills, which means that you'll graduate as a qualified and highly employable IT professional.

Career options include work as a security analyst, project manager, security system manager, cryptographer, business analyst, consultant, security system developer or programmer, information security auditor, law enforcement personnel or IT security engineer. An honours year is available for high-achieving students upon completion of this degree.

As a graduate of this degree you'll be eligible for professional recognition with the Australian Computer Society (ACS) – Australia's leading professional association for the Information and Communication Technology (ICT) sector. As a member, you'll receive international recognition for your skills as well as professional development opportunities, networking and information resources.

Units in the course may include assessment hurdle requirements.

## Professional recognition

The Bachelor of IT Security is professionally accredited with the Australian Computer Society (ACS).

## Career opportunities

Career options include work as a security analyst, project manager, security system manager, cryptographer, consultant, security system developer or programmer, information security auditor, business continuity or IT security engineer.

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Combined courses

The Bachelor of IT Security is also available as a combined course with Criminology, please refer to D380 Bachelor of Criminology/Bachelor of IT Security.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

To complete the Bachelor of I.T. Security, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 17 core units (which includes a compulsory internship unit)

## Course overview

Deakin's Bachelor of Cyber Security provides a solid foundation of the cyber security literacy and technical skills required by industry for a cyber security professional including those allowing you to be able to investigate and combat cyber-crime and cyber terrorism.

The digital world is central to the way we live, work, communicate and conduct business. Now more than ever, it's vital that the data and systems providing these services be safeguarded by ethical professionals with strong cyber security literacy and technical skills.

Whether it's keeping in touch with friends on social networks, paying bills online, or using water or electricity, we depend on secure networked systems to keep our confidential information safe and rely on the assurance provided by custodians of this information to carry out activities in our day-to-day lives. Governments, military, financial institutions, hospitals and other businesses are all facing an unprecedented sophistication of cyber-attacks and there is a shortage of people with the skills and capability needed to ensure security in cyberspace.

This course will teach you how to identify, diagnose, analyse and manage the challenges of Cyber security. You'll cover areas such as computer crime and digital forensics, evaluating software for security vulnerabilities, designing secure databases, securing operating systems, assessing and reinforcing the security of websites, integrating security requirements into new developments, designing secure network architectures, performing risk assessments and responding to cyber security incidents.

Classes use specialised software to enable practice of real world cyber-attack and response scenarios. You'll consequently get the chance to reflect on the need for cyber security in a working environment, and the various solutions that might apply.

The degree focuses on technical elements and sets you up with strong skills in critical thinking and problem solving. You'll be able to apply your learning in the workplace, and capably deal with imminent threats and challenges from the digital space where interconnected vehicles, drones, smart home gadgets, mobile and wearable devices, and health-kits prosper.

The course will help you develop strong interpersonal skills and a capacity for team-work. You'll also build your written and oral communications skills, which means that you'll graduate as a qualified and highly employable IT professional.

Career options include work as a security analyst, project manager, security system manager, cryptographer, business analyst, consultant, security system developer or programmer, information security auditor, law enforcement personnel or IT security engineer. An honours year is available for high-achieving students upon completion of this degree.

As a graduate of this degree you'll be eligible for professional recognition with the Australian Computer Society (ACS) – Australia's leading professional association for the Information and Communication Technology (ICT) sector. As a member, you'll receive international recognition for your skills as well as professional development opportunities, networking and information resources.

## Professional recognition

The Bachelor of Cyber Security is professionally accredited with the Australian Computer Society (ACS).

## Career opportunities

Career options include work as a security analyst, project manager, security system manager, cryptographer, consultant, security system developer or programmer, information security auditor, business continuity or IT security engineer.

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Combined courses

The Bachelor of Cyber Security is also available as a combined course with Criminology, please refer to D380 Bachelor of Criminology/Bachelor of Cyber Security.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a broad, coherent knowledge of the IT discipline including its dynamic environment, with detailed knowledge of project management principles and in depth knowledge in IT Security. Design, develop and implement IT systems and software, and associated policies and procedures for optimal use and apply industry standards and best practice in one or more specialised areas of IT. Acquire in-depth knowledge and skills to develop, implement and manage security solutions for systems, networks, and data according to industry-accepted standards and best practice.
Communication	Communicate in an IT context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Utilise a range of digital technologies and information sources to discover, analyse, evaluate, select, process and disseminate both technical and non-technical information.
Critical thinking	Evaluate specialist IT information using critical and analytical thinking, technical skills and well-developed judgement to identify problems, analyse user requirements and propose solutions.
Problem solving	Apply theoretical constructs and skills and critical analysis to real-world and ill-defined problems and develop innovative IT solutions.
Self-management	Apply knowledge and skills to new situations in professional practice and/or further learning in the field of IT with adaptability, autonomy, responsibility and personal accountability for actions as a practitioner and a learner. Apply understanding of reflective practice and self-critique skills within broad parameters to plan for their own future continuing professional development.
Teamwork	Apply the principles of effective teamwork as a member of diverse IT teams to demonstrate responsibility for own learning within broad parameters.
Global citizenship	Apply professional and ethical standards and accountability for own learning to the development, design, construction and management of localised IT solutions.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Cyber Security, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 17 core units (which includes a compulsory internship unit – SIT306 IT Internship or STP301 Industry Based learning)
- 7 elective units
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of SIT010 Safety Induction Program (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels
- level 3 – minimum of 6 credit points of which at least 4 must be SIT-coded units

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

SIT124	Exploring I.T.
SIT105	Thinking Technology and Design
SIT182	Real World Practices for Cyber Security
STP050	Academic Integrity (0 credit points)
SIT010	Safety Induction Program (0 credit points)

Plus one elective unit

##### Trimester 2

SIT103	Data and Information Management
SIT102	Introduction to Programming

Plus two elective units

#### Level 2

##### Trimester 1

SIT223	Professional Practice in Information Technology
SIT192	Discrete Mathematics
SIT384	Cyber Security Analytics
STP010	Introduction to Work Placements (0 credit points)

Plus one elective unit

##### Trimester 2

SIT202	Networks and Communications
SIT281	Cryptography
SIT284	Cyber Security Management
SIT282	Computer Crime and Digital Forensics

## Level 3

### Trimester 1

SIT374 Project Design ~  
 SIT379 Ethical Hacking

Plus one unit in:

SIT306 IT Placement ^  
 or  
 STP301 Industry Based Learning

Plus one elective unit

### Trimester 2

SIT302 Project Delivery  
 SIT382 System Security

Plus two elective units

^ offered in Trimester 1, trimester 2 and Trimester 3

~ Note: Students are expected to undertake SIT374 and SIT302 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT374 and SIT302 consecutively.

## Course certifications

Students enrolled in S334 Bachelor of Cyber Security (and combined course – D380 Bachelor of Criminology/ Bachelor of Cyber Security) will have the opportunity to complete the following certifications, noting that these certifications are not part of your course requirements:

SIT001 Cyber Security Fundamentals (0 credit points)  
 SIT002 Computer Hacking Forensic Investigator (0 credit points)  
 SIT003 Certified Ethical Hacker (0 credit points)  
 SIT004 Certified Security Analyst (0 credit points)

## Electives

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

## Work experience

This course includes a compulsory work placement where you will be required to undertake a minimum of 100 hours in industry, providing professional work experience with an approved host organisation. Alternatively, high achieving students may have the opportunity to undertake an extended full-time paid industry-based learning placement between 6–12 weeks (conditions apply, please refer to [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).)

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Marine Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Marine Science
<i>Campus</i>	Offered at Waurm Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>Deakin course code</i>	S337
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

*New course commencing Trimester 1 2020*

## Course overview

Study Marine Science at Deakin's Geelong Waurm Ponds Campus and you will gain essential knowledge and skills in ocean systems and resources through a multidisciplinary approach in the areas of marine microbiology and genomics, oceanography, coastal processes, marine modelling, marine biology, marine ecology, fisheries and aquaculture. This course will provide you with the skills required to join the greater marine science community using new marine technologies and innovative approaches to help protect and drive the sustainable future of the world's oceans.

Learn from expert marine science teaching staff in well-equipped laboratories and facilities; equipped for analytical chemistry, molecular biology, genomics and microbiology. The course incorporates hands-on practical activities located at Queenscliff, which gives you direct access to the Great Southern Reef; where rocky shores, seagrass beds, mangroves, subtidal reefs, and iconic surf beaches will become your classroom.

## Indicative student workload

Students can expect to participate in a range of teaching activities each week. This could include classes, seminars, field trips, practicals and online interaction. Individual unit details in the course structure provide specific information relating to teaching activities in each unit. Students also need to study and complete assessment tasks in their own time.

## Career opportunities

As a marine scientist, you will gain skills across multi-disciplinary areas which allow for a diverse range of career opportunities in both research and applied fields in areas such as oceanography, marine biochemistry and biotechnology, fisheries, remote sensing, marine biology and ecology, microbiology and genomics, mathematics or economics. Further postgraduate studies including research training can lead to students becoming research scientists in a specific field of marine science.

## Participation requirements

Students are required to complete units in Trimester 3.

Students enrolled at the Geelong Waurm Ponds Campus will be required to undertake some of their practical learning experiences at the Queenscliff Marine Research Centre.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Course expenses

In addition to student contribution fees, students should be aware that they may be required to meet their own expenses in connection with travel, food and accommodation while on fieldwork.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Contribute scientific predictions, observations, innovation and knowledge towards a world-wide, sustainable blue economy by integrating and applying well-developed, multidisciplinary knowledge in the marine science field.</p> <p>Apply technical capabilities, including emerging marine technology and innovation and use them in a range of problem solving activities in a professional and/or academic setting within the field of marine science.</p>
Communication	<p>Use appropriate scientific language and formats including written, visual, oral and graphical forms to communicate and engage with a broad spectrum of society, such as those in industry, policy, regulation and the community.</p> <p>Generate, analyse and present key information in a professional manner with evidence from local and global contributions and contexts.</p>
Digital literacy	<p>Use well developed technical skills and judgement to retrieve, analyse, synthesise and evaluate information using a variety of tools and techniques.</p> <p>Apply quantitative skills in marine science using software programs associated with computational science and system dynamics</p>
Critical thinking	<p>Critically evaluate scientific information from multiple sources and use scientific methods and frameworks to structure and plan observations, experimentation, fieldwork investigations.</p> <p>Use analytical thinking and judgement to evaluate, synthesise and generate an integrated knowledge, formulate hypotheses and test them against evidence-based scientific concepts and principles in the field of marine science.</p>

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	<p>Apply traditional, emerging and innovative approaches and information to scope and solve real world (authentic) problems in marine science.</p> <p>Evaluate scientific methodologies, hypotheses, laws, facts and principles to create solutions for authentic marine science issues taking in account human dimensions of conservation management.</p>
Self-management	<p>Take personal, professional and social responsibility within changing professional science contexts to develop autonomy as learners and evaluate own performance.</p> <p>Work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.</p>
Teamwork	<p>Work in various team roles and also work collaboratively in a team to contribute towards achieving team goals.</p> <p>Apply interpersonal skills to interact and collaborate effectively to enhance outcomes in diverse professional, social and cultural contexts.</p>
Global citizenship	<p>Recognise the role, relevance and ethical implications of marine science in society and apply cultural, economic and social awareness, including those of indigenous people.</p> <p>Adopt, appreciate and respect scientific morals and ethics, including working with animals.</p>

Approved by Faculty Board 14 March 2019

## Course rules

To complete the Bachelor of Marine Science, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study and successfully complete 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points which must include the following:

- 17 core units (totalling 17 credit points)
- 7 credit points of elective units
- level 1 – maximum of 10 credit points
- levels 2 and 3 – minimum of 14 credit points over both levels
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP010 Career Tools for Employability (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

- STP050 Academic Integrity (0 credit points)
- SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit points)
- SLE107 Marine Environments
- SLE111 Cells and Genes
- SLE133 Chemistry in Our World

Plus one elective unit

##### Trimester 2

- SLE108 Ocean Processes
- SIT190 Introductory Mathematical Methods
- STP010 Introduction to Work Placements (0 credit points)

Plus two elective units

#### Level 2

##### Trimester 1

- SLE236 Marine Microbiology
- SLE238 Marine Biology
- SLE251 Research Methods and Data Analysis

Plus one elective unit

##### Trimester 2

- SLE240 Analysing Marine Dynamics
- SLE262 Aquaculture and the Environment

Plus one elective unit

##### Trimester 3

- SLE242 Quantitative Marine Ecology

#### Level 3

##### Trimester 1

- SLE301 Professional Practice #
- SLE304 Geographic Information Systems: Uses in Aquatic Environments
- SLE345 Oceanography +

Plus one elective unit

##### Trimester 2

- SLE315 Marine Animal Physiology
- SLE327 Fisheries Science +
- SLE328 Oceans, Coasts and Climate Change

Plus one elective unit

+ available at Waurm Ponds (Geelong) from 2021

# Must have successfully completed STP010 Career Tools for Employability (0 credit point unit)

## Recommended elective

SIT194 Introduction to Mathematical Modelling

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

It is important to note that some elective units may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

## Work experience

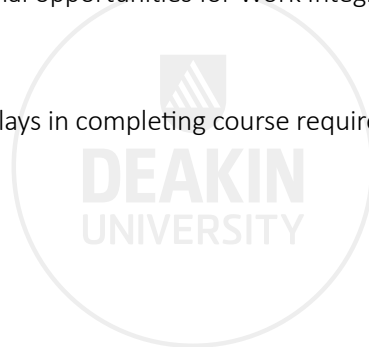

The course includes a compulsory professional practice unit that requires you to undertake at least 80 hours of work experience in a course-related host organisation. You'll gain practical experience by completing a two week placement at a course-related host organisation to provide you with opportunities for workplace visits, field trips, industry learning and to establish valuable networks – giving you better insight into your possible career outcomes.

You'll also have the opportunity to undertake a discipline-specific industry placement as part of your course. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Bachelor of Design (Architecture)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Design (Architecture)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waterfront (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	001835D
<i>Deakin course code</i>	S342
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

The Bachelor of Design (Architecture) engages with the rich and diverse discipline of architecture. As the undergraduate portion of an accredited programme the course prepares the foundation for further study whilst developing your skills to create meaningful, sustainable and stimulating built environments.

The course integrates multiple creative and technical fields as well as skillsets that examine and shape the places we inhabit, through all building types, spaces and locations. You'll explore architectural ideas through cutting edge content, research and a global perspective – gaining practical knowledge studying real-world projects and developing your ability to generate, analyse and communicate your own ideas. You will produce design concepts whilst being challenged to explore architectural history and philosophy, building science and the environment, construction technologies, computer-aided modelling, drawing, model making and digital fabrications.

This course is the ideal pathway for application to Deakin's Master of Architecture for those interested in seeking employment or becoming a qualified architect. Graduates are also well-prepared for employment in private architectural practice, with government organisations or private companies in property development, building and design.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to engage in a range of teaching activities each week. This could include classes, seminars, workshops, site visits and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

This program is accredited (within Australia) by the Australian Institute of Architects, the Architects Registration Board of Victoria and the Architects Accreditation Council of Australia, when followed by successful completion of the Master of Architecture, S700.

This course has been validated and recognised by the Board of Architects Malaysia to be included on their 'List of Recognised Architectural Programmes'.

## Career opportunities

As a graduate of this course you may be employed in private architectural practices, government organisations and private companies in property development, building and design.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Synthesise knowledge of architecture history, theory, technology and practice to design, develop and manage architecture projects, demonstrating initiative and judgement for professional practice. Apply technical and theoretical knowledge of architectural design to propose diverse, authentic, alternative, and well-rounded responses that are conceptually and physically sustainable to problems in the contemporary built environment. Integrate the knowledge of language of architecture, its meanings, capacities and implications to demonstrate ability and responsibility as reflective practitioners, in making decisions to define the human landscape.
Communication	Communicate clearly, professionally and responsibly in a variety of contexts using oral, visual, digital, graphic and interpersonal communication modes to inform, motivate and persuade specialist and non-specialist audiences about architectural ideas and designs. Imagine, conceive and represent ideas using the language of architecture, its codes and conventions to reflect on possibilities, the implications of hypothetical designs and its applications.
Digital literacy	Apply knowledge of relevant technological tools, methodologies and techniques to locate, collect, analyse, interpret and synthesise complex information. Use architecture theory and practice to analyse, evaluate, produce and disseminate design responses using techniques and technology ethically and responsibly in a digital world.
Critical thinking	Use critical thinking to analyse and provide a rational, reflective and socially responsible response to architectural problems at different scales and complexities in a variety of contexts. Examine causes and consequences of different morphologies to appreciate their capacities and opportunities in order to reproduce, manipulate, and identify conventional and alternative solutions to architectural problems.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Investigate and Identify ill-defined real world environmental, cultural, physical and social architectural problems, explain its significance, causes and consequences, and use a methodical approach to formulate a solution. Make appropriate choices to solve problems in complex and contradictory situations based on knowledge of social, economic, environmental and cultural aspects of architectural design to evolve human landscape.
Self-management	Work independently and collaboratively to produce architectural designs and responses in an ethical, responsible and professional manner. Use initiative and judgement to reflect on knowledge and skills, to demonstrate autonomy and capacity to identify opportunities for improving practice.
Teamwork	Work as a team to analyse and evaluate complex problems, and share critical, analytical and creative approaches to select best responses to architectural problems.
Global citizenship	Integrate subjective and objective stakeholder perspectives in the process of formulating architectural and design responses taking into account economic, cultural, social and ethical values inherent in human landscape. Engage with global trends in contemporary architectural design and urbanism in order to recognise cultural diversity, the need for equity in outcomes and implement high ethical and professional standards.

Approved by Faculty Board 7 June 2018

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- 19 core units (22 credit points)
- 2 elective units
- Completion of SRA010 Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

#### Year 1

##### Trimester 1

SRA143	Art and Society
SRC163	Drawing Studio
SRD163	Studio 01: Thoughtscapes
SRT153	Building Materials Science
SRA010	Safety Induction Program (0 credit points)
STP050	Academic Integrity (0 credit points)

##### Trimester 2

SRC221	Modelling Studio
SRD164	Architecture Design Studio 02: Matterscapes (2 credit points)
SRT151	Construction and Structures 1

## Year 2

### Trimester 1

- SRA215 Utopian Ideals in the Modern World
- SRD263 Studio 03: Earthscapes
- SRT251 Construction and Structures 2

plus one elective unit

### Trimester 2

- SRA224 Austral-Asian Architecture
- SRD264 Studio 04: Publicscapes (2 credit points)
- SRT257 Building Environmental Studies 1

## Year 3

### Trimester 1

- SRC362 Documentation Studio
- SRD363 Studio 05: Hybridscapes
- SRT358 Building Environmental Services
- SRA323 Contemporary Architecture

### Trimester 2

- SRD364 Super studio (2 credit points)
- SRT351 Construction and Structures 3

plus one elective unit

## Electives

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

## Work experience

You'll have the opportunity to undertake a discipline-specific industry placement as part of your course. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You may choose to use one of your elective units to participate in a short-term local or international study program, tour or exchange, many of which will enhance your global architectural awareness and experience. You will also have an opportunity to contribute to the student led, designed and managed end of year curated exhibition – PaperSpace.

# Bachelor of Construction Management

<i>Award granted</i>	Bachelor of Construction Management
<i>Campus</i>	For students who commenced prior to 2014
<i>Duration</i>	4 years full-time or part-time equivalent
<i>CRICOS course code</i>	001837B
<i>Deakin course code</i>	S346 (version 1)

*The final intake to this course version was in 2013. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Construction Management is offered to students wishing to gain employment in management positions in construction and allied industries in Australia and overseas. The course consists of four years of academic study. You will be provided with an excellent mix of hands-on practice and theory and integrated studies in technology and building management, including building economics and law, project management, building technology, measurement and estimation, quantity surveying, building surveying and building practice. The course develops progressively from the elementary concepts underlying planning and management of building production and technical studies through to the complexities and interrelationships of modern construction practices.

Units in the course may include assessment hurdle requirements.

## Professional recognition

This course is professionally accredited by industry. As a graduate of this course you will have completed the academic requirements for membership of the Australian Institute of Building (AIB), the Australian Institute of Quantity Surveyors (AIQS), the Chartered Institute of Building (CIOB) and the Royal Institution of Chartered Surveyors (RICS). It is recognised for practice in more than 50 countries, providing a global passport for work in this field in Australia and overseas.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 32 credit points, which must include the following:

- 28 core units
- Completion of SRA010 Safety Induction Program (0-credit-point compulsory unit)
- Level 3 units – at least 6 credit points
- Level 1 units – no more than 10 credit points

The Bachelor of Construction Management may be completed in less than four years by taking selected units in trimester 3, This also provides for greater flexibility in your studies.

The Bachelor of Construction Management may be awarded at pass or honours level. Normally an overall level of academic performance at 60% or greater is required to be eligible for honours.

# Bachelor of Construction Management (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Construction Management (Honours)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>

<i>Cloud Campus</i>	No
<i>Duration</i>	4 years full-time or part-time equivalent
<i>CRICOS course code</i>	080117B
<i>Deakin course code</i>	S346 (version 2)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Get a professionally recognised qualification that gives you knowledge of technology and current building management practices with the Bachelor of Construction Management (Honours). Whether large or small, domestic or commercial, building projects require a manager with a solid overview of what's involved to make it all happen.

In this course you'll get an excellent understanding of building economics and law, project management, building technology, measurement and estimating, quantity surveying and building practice.

As a graduate you'll be eligible for professional recognition with the Australian Institute of Building (AIB), Australian Institute of Quantity Surveyors (AIQS), Chartered Institute of Building (CIOB), and the Royal Institution of Chartered Surveyors (RICS). Your qualification will be recognised for practice in more than 50 countries, providing a global passport for work in this field in Australia and overseas.

You'll be qualified for roles such as construction manager, estimator, planner and quantity surveyor in a building company or sub-contracting organisation. Opportunities also exist in the property development and property and maintenance divisions of companies that are responsible for large property portfolios.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, workshops, site visits and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

This course is professionally accredited by industry. As a graduate of this course you will have completed the academic requirements for membership of the Australian Institute of Building (AIB), the Australian Institute of Quantity Surveyors (AIQS), the Chartered Institute of Building (CIOB) and the Royal Institution of Chartered Surveyors (RICS). It is recognised for practice in more than 50 countries, providing a global passport for work in this field in Australia and overseas.

## Career opportunities

As a graduate of the Bachelor of Construction Management (Honours) you may find employment as a construction manager, estimator, project manager or quantity surveyor in a range of industry organisations such as contractors, property developers and consulting firms. Opportunities also exist in the property and facilities divisions of companies that are responsible for large property portfolios.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a broad and coherent knowledge of construction materials, structures, construction practices, estimating, cost planning, regulatory, legal, construction economics and construction management frameworks to manage construction projects. Integrate knowledge of technology, management, economics, regulatory and legal systems in implementing a construction project from small residential to large complex and high-rise buildings. Integrate well-developed knowledge of contextual factors that impact on construction management including regulatory requirements, industry environment, professional practice and sustainability to finalise construction management decisions. Acquire and apply research skills to initiate and formulate a research plan and undertake research that contributes to scholarly knowledge, based on current research directions.
Communication	Communicate clearly, professionally and responsibly with specialist and non-specialist audiences in a variety of contexts using oral, written, graphical and interpersonal skills to inform, negotiate, lead and motivate a project team.
Digital literacy	Utilise a range of digital technologies including building information modelling to locate, select, analyse, use, evaluate, and disseminate a variety of information.
Critical thinking	Use critical and analytical thinking and judgment to identify and evaluate appropriate principles and procedures in technology, law, management and economics for construction projects.
Problem solving	Apply analytical thinking and judgment to make decisions to identify a variety of problems and recommend solutions related to technology, law, management and economics for construction projects. Generate solutions to construction management problems using a framework of accountability and professional practice in the construction industry environment.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Use appropriate strategies including reflective evaluation to develop independence and demonstrate responsibility for professional learning.
Teamwork	Work in multidisciplinary teams and develop leadership skills to manage construction projects and use appropriate team processes to collaborate, communicate, and negotiate solutions.
Global citizenship	Engage ethically and productively with diverse stakeholders, communities and cultures in the global construction industry.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Construction Management (Honours), students must attain 32 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The 32 credit points must include the following:

- 28 core units (29 credit points)
- 3 elective units (1 elective unit must be level 2 or above)
- Completion of SRA010 Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

The Bachelor of Construction Management (Honours) may be completed in less than four years by taking selected units in trimester 3. This also provides for greater flexibility in your studies.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

SRR402	Construction Research Thesis (2 credit points)
SRV499	Built Environment Integrated Research

## Electives

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

## Work experience

You can apply to undertake a discipline specific industry placement as an elective option as part of your course. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You may choose to use one of your elective units to participate in a short-term local or international study program to engage with construction management industry perspectives globally.

## Research and research-related study

The key assessment of research and research skills in the programme is through two units in the final year of the course. You will have the opportunity to undertake an in-depth investigation of a chosen topic under the guidance of an academic supervisor that has expertise in the research field.

# Bachelor of Engineering

<i>Award granted</i>	Bachelor of Engineering
<i>Campus</i>	Waurm Ponds (Geelong) – For students who commenced prior to 2011
<i>Duration</i>	4 years full-time or part-time equivalent
<i>CRICOS course code</i>	075868E
<i>Deakin course code</i>	S367

*The final intake to this course version was in 2010. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Engineering places great emphasis on the practical application of engineering and scientific principles to produce industry-ready engineers, who are immediately employable and capable of adapting to an ever-changing future.

You will undertake common subjects in your first year, providing you with a broad knowledge base, before choosing to specialise in civil, electrical and electronics, mechanical or mechatronics and robotics engineering.

You will learn generic skills including entrepreneurship, innovation and leadership, project management, technical report writing and presentation, and comprehension and communication, as well as develop an understanding of the ethical basis of the engineering profession and practice, contemporary technical and professional issues in the practice of engineering, and complex problems and producing innovative solutions beneficial to an organisation and society.

You will also gain a sound, fundamental understanding of the scientific principles underlying technology; learn the basic principles underlying the management of physical, human and financial resources; acquire the mathematical and computational skills necessary for solving theoretical and practical problems and for meeting future changes in technology; and gain an understanding of the social, cultural, global and environmental responsibilities of the professional engineer.

An Engineering Scholars Program is available to students who achieve an ATAR of 80 and above, all of the sequences in the Bachelor of Engineering with extra opportunities for paid industry internships or research placements and mentoring from our world-class researchers or professional engineers working in industry. The Engineering Scholars Program does not include a paid scholarship; however, students are strongly encouraged to apply for scholarships.

Units in the course may include assessment hurdle requirements.

## Professional recognition

Deakin's Bachelor of Engineering is accredited by Engineers Australia, which gives the degree international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud (online) enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud (online) enrolled students are therefore required to attend campus mode conducted activities for all units in the course (with the exception of units SEE010 and SEP490) during the corresponding Engineering Practice Week in a trimester. Engineering Practice Week is conducted in week 8 of each trimester. Attendance at campus mode activities is compulsory and failure to attend will result in a fail grade being awarded for the respective affected unit(s) for that particular trimester.

## Articulation and credit transfer

Flexible entry and exit points allow students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Combined courses

The Bachelor of Engineering is also available as a combined courses with commerce, information technology and science.

## Equipment requirements

Cloud (online) students must have access to a personal computer with internet access and be able to run software in a Windows XP, vista or 7 environment.

Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Engineering professional practice sequence

A series of professional practice units have been introduced as core requirements of the Bachelor of Engineering. These four units (one at each year level) are intended to enable students to increase their awareness of various generic engineering, technological and professional practice skills, and how those skills are applied in the workplace. There will be an emphasis on group activities and assessment and a focus on the 'real' world.

## Pass and honours degrees

The Bachelor of Engineering may be awarded at pass or honours level.

To be awarded the Bachelor of Engineering with honours:

- students shall normally complete a course of study satisfying the requirements of the degree of Bachelor of Engineering, including an approved major project with a written report assessed by an internal panel; and
- have been awarded a weighted average mark across level 2, 3 and 4 science and engineering units exceeding a minimum value determined by the Faculty Board.

The weighted average mark will be used to determine the grade of honours to be awarded.

## Work experience

Before students will be deemed eligible to graduate they must obtain an aggregate of at least 12 weeks of suitable practical experience during their program. Work experience would normally be gained during the vacation periods. Further details are contained in the unit description for SEP490 Engineering Work Experience.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 32 credit points, which must include the following:

- 30 core units and 2 Engineering elective units (this includes 2 highly recommended 4th year units SET401 and SET402 Advanced Topics 1 and 2)
- completion of SEE010 Safety Induction Program (0 credit-point compulsory unit)
- a maximum of 10 credit points at Level 1
- completion of SEP490 – 12 Week Engineering Work Experience (0 credit points)
- Campus requirement for professional practice component – Cloud (online) enrolled students MUST attend for approximately a two week period in the subjects: SEB121, SEB223, and both Campus and Cloud (online) enrolled students MUST attend SEB324 and SEJ446 (combined)

## Major sequences

Refer to the details of each major sequence for availability.

- Civil
- Electrical and Electronics
- Mechatronics and Robotics
- Mechanical

## Details of major sequences

### Streams within the Bachelor of Engineering

The first level is mainly common and students enrol into a particular stream and select a major area of study at the end of the first level.

Students complete 30 core units and 2 Engineering elective units.

#### **Civil – unit set code MJ-S000037**

Civil Engineering degree gives you the building blocks to design, construct and maintain our community. Learn to plan and build the infrastructure systems that are necessary for our day-to-day life. Civil engineers are responsible for the design, construction and project management of roads, airports and railways; water supply and sewerage systems; water resources management; and buildings and other infrastructures. This course covers the broad range of civil engineering disciplines including engineering materials, structural engineering, water engineering, geotechnical engineering and transport engineering. Graduates can expect to gain employment in a wide range of organisations such as construction companies, water authorities, local government bodies, public works departments and as consulting engineers.

#### Level 1

##### Trimester 1

SEB121	Engineering Practice
SEB101	Engineering Physics ^
SIT199	Applied Algebra and Statistics
SED102	Engineering Graphics and CAD
SEE010	Safety Induction Program *

\* SEE010 is a 0 credit point safety induction unit

^ SEB101 replaces SEP101 from 2016

##### Trimester 2

SEE103	Electrical Systems
SEM111	Engineering Materials 1
SIT194	Introduction to Mathematical Modelling
SIT172	Programming for Engineers

**Level 2****Trimester 1**

SEM218	Fluid Mechanics
SEM223	Engineering Mechanics
SEV217	Engineering Geology and Surveying
SEP291	Engineering Modelling

**Trimester 2**

SEB223	The Professional Environment for Engineers and Scientists
SEM222	Stress Analysis
SEV215	Water Systems
SEV252	Geo Mechanics 1

**Level 3****Trimester 1**

SEV320	Theory of Structures
SEV322	Hydrology and Hydraulics
SEV362	Geotechnical Engineering
SEV354	Transportation Engineering

**Trimester 2**

SEB324	Project Management
SEV323	Steel and Timber Structures
SEV328	Water and Wastewater Treatment
SEV353	Reinforced Concrete Structures
SEP490	Engineering Work Experience

*Note: SEP490 – 0 credit points, available in trimester 1, 2 and 3*

**Level 4****Trimester 1**

SEJ441	Engineering Project A
SEV454	Advanced Structural Design
SEV455	Water System Design

Engineering elective

**Trimester 2**

SEJ446	Engineering Project B (2cps)
SEV414	Transportation Infrastructure

Engineering elective

**Highly recommended electives:**

SET401	Advanced Topics in Engineering 1
SET402	Advanced Topics in Engineering 2

***Mechatronics and Robotics – unit set code MJ-S000040***

Mechatronics and robotics is combined in one degree at Deakin, providing a broader based course and offering wider career choices. The course combines electronics, mechanical and robotics engineering, with mechanical and robotics featuring more strongly than in other programs. It offers studies in autonomous systems, robotic system design and industrial communication design. The course is tailored to industry needs and has close links through strong research programs, cutting-edge technology and facilities, and project-based learning. Students can access state-of-the-art robotics systems and program industrial robots, and through their final-level projects, gain an introduction to the emerging haptics research area. Graduates can be employed as electronic control systems engineers or robotics engineers, and work in areas including factory control, automation, and control system design.

## Level 1

### Trimester 1

SEB121	Engineering Practice
SED102	Engineering Graphics and CAD
SEB101	Engineering Physics ^
SIT199	Applied Algebra and Statistics
SEE010	Safety Induction Program

\* SEE010 is a 0 credit point safety induction unit

^ SEB101 replaces SEP101 from 2016

### Trimester 2

SIT172	Programming for Engineers
SIT194	Introduction to Mathematical Modelling
SEE103	Electrical Systems
SEM111	Engineering Materials 1

## Level 2

### Trimester 1

SEP291	Engineering Modelling
SEE202	Digital Electronics
SEE206	Measurement and Instrumentation
SEM223	Engineering Mechanics

### Trimester 2

SEB223	The Professional Environment for Engineers and Scientists
SEE215	Unit description is currently unavailable
SEM222	Stress Analysis
SEE208	Modern Power Generation Systems Design

## Level 3

### Trimester 1

SEE320	Microcontroller System Design
SEE321	Electro-Mechanical Systems
SED302	Computer Aided Engineering *
SEM327	Dynamics of Machines

\* SED302 replaces SEE325 from 2016

### Trimester 2

SEE326	Artificial Intelligence for Autonomous Systems ~
SEB324	Project Management
SEE344	Control Systems
SEE312	Data Communication

## Level 4

### Trimester 1

SER400	Virtual and Augmented Interfaces #
SEJ441	Engineering Project A
SEM433	Mechatronic Design

Engineering elective

# SER400 replaces SEE426 from 2016

**Trimester 2**

SEJ446	Engineering Project B (2cps)
SEE412	Industrial Data Communication
SEP490	Engineering Work Experience

Engineering elective

*Note: SEP490 – 0 credit points, available in trimester 1, 2 and 3*

~ SEE326 will be offered in Trimester 1 from 2017

**Highly recommended electives:**

SET401	Advanced Topics in Engineering 1
SET402	Advanced Topics in Engineering 2

**Mechanical – unit set code MJ-S000039**

Product development and innovation are key drivers for Australian industry. To meet this need, Deakin's mechanical engineering degree brings together leading computer-aided engineering technologies and advanced materials to provide one of the most relevant mechanical engineering degrees in Australia. The automotive industry, in particular, has been involved in the design of the degree, and graduates can look forward to a high level of employment in this industry and supplier companies, as well as other leading manufacturing and design companies. The degree draws heavily on Deakin's world-class research teams in automotive engineering and advanced materials, with a practical problem solving approach that includes an opportunity to work on the Formula Society of Automotive Engineering (FSAE) race car, designed and built by our degree students. Along the way, students will develop project management, communication and financial management skills, as well as a solid understanding of product and process modelling and designing for sustainability.

**Level 1****Trimester 1**

SEB121	Engineering Practice
SED102	Engineering Graphics and CAD
SEB101	Engineering Physics ^
SIT199	Applied Algebra and Statistics
SEE010	Safety Induction Program

\* SEE010 is a 0 credit point safety induction unit

^ SEB101 replaces SEP101 from 2016

**Trimester 2**

SEE103	Electrical Systems
SEM111	Engineering Materials 1
SIT172	Programming for Engineers
SIT194	Introduction to Mathematical Modelling

**Level 2****Trimester 1**

SEM218	Fluid Mechanics
SEM212	Materials 2
SEM223	Engineering Mechanics
SEP291	Engineering Modelling

**Trimester 2**

SEB223	The Professional Environment for Engineers and Scientists
SED202	Mechanical Design and CAM
SEM202	Thermodynamics *
SEM222	Stress Analysis

\* SEM202 replaces SEM314 from 2016

### Level 3

#### Trimester 1

SEE321	Electro-Mechanical Systems
SED302	Computer Aided Engineering
SEM327	Dynamics of Machines
SEM329	Materials Selection and Performance

#### Trimester 2

SEB324	Project Management
SEE344	Control Systems
SEM313	Manufacturing
SEM422	Advanced Stress Analysis

### Level 4

#### Trimester 1

SEJ441	Engineering Project A

SEM406	Advanced Modelling and Simulation

Engineering elective

#### Trimester 2

SED402	Advanced Design Methodologies
SEJ446	Engineering Project B (2cps)
SEP490	Engineering Work Experience

Engineering elective

*Note: SEP490 – 0 credit points, available in trimester 1, 2 and 3*

#### Highly recommended electives:

SET401	Advanced Topics in Engineering 1
SET402	Advanced Topics in Engineering 2

#### **Electrical and Electronics – unit set code MJ-S00053**

Electrical and electronic engineers are responsible for the design, construction, protection, and project management of power generation, distribution, transmission, scheduling and usage, automation and control.

This program covers the broad areas of electrical and electronic engineering disciplines including renewable electrical power generation, smart distribution, urban, industrial, rural and regional power usage, the role of energy production and efficiency in climate change. This course has been designed to attract students who can be trained to fulfil the shortage of electrical and electronic engineers. It also is designed to encourage responsible use of electrical power in a changing climate. Students learn and practice on industry standard tools in world class facilities. The program also has strong links with the electrical and renewable energy engineering industry providing students a true professional engineering practice.

### Level 1

#### Trimester 1

SEB121	Engineering Practice
SEB101	Engineering Physics ^
SIT199	Applied Algebra and Statistics
SED102	Engineering Graphics and CAD
SEE010	Safety Induction Program *

\* SEE010 is a 0 credit point safety induction unit

^ SEB101 replaces SEP101 from 2016

#### Trimester 2

### Trimester 1

- SEP291 Engineering Modelling
- SEE207 Power Engineering Design
- SEE202 Digital Electronics
- SEE206 Measurement and Instrumentation

### Trimester 2

- SEB223 The Professional Environment for Engineers and Scientists
- SEE215 Unit description is currently unavailable
- SEE205 Analogue Electronics
- SEE208 Modern Power Generation Systems Design

## Level 3

### Trimester 1

- SEE307 Systems and Signals
- SEE321 Electro-Mechanical Systems
- SEE320 Microcontroller System Design
- SEE309 Power Systems Protection and Relaying

### Trimester 2

- SEB324 Project Management
- SEE308 Electrical Machines and Drives
- SEE344 Control Systems
- SEE312 Data Communication

## Level 4

### Trimester 1

- SEJ441 Engineering Project A
- SEE405 Smart Generation and Transmission
- SEE406 Power System Analysis

Engineering elective

### Trimester 2

- SEJ446 Engineering Project B (2cps)
- SEE412 Industrial Data Communication
- SEP490 Engineering Work Experience

Engineering elective

*Note: SEP490 – 0 credit points, available in trimester 1, 2 and 3*

### Highly recommended elective:

- SET401 Advanced Topics in Engineering 1
- SET402 Advanced Topics in Engineering 2

# Bachelor of Zoology and Animal Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Zoology and Animal Science
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurn Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	075365F
<i>Deakin course code</i>	S369
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Study Zoology and Animal Science at Deakin and you'll gain a broad understanding of the current field of zoology with an emphasis on the latest research and the development of practical and evidence-based decision-making skills.

The course has a strong focus on Australian fauna and its unique importance in the global environment. Throughout your course you'll explore the potential effects environmental change may have on the evolution, disease and physiology of animals and how they adapt to a changing environment. The social and economic impact that human activity has on animals and their ecosystems will also be highlighted.

You'll have the opportunity to learn from experienced staff, and combine your on-campus work with off-campus excursions.

As a graduate you may find career opportunities in a range of areas including environmental monitoring and management, wildlife biology, private environmental consulting, government quarantine, museums and zoological research. Successful completion of the course may also lead to opportunities for further study including postgraduate research training both in Australia and overseas.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Students with this degree may find career opportunities in a range of areas including zoological research, environmental monitoring and management, wildlife biology, private environmental consulting, government quarantine, research assistants, environmental managers, pest management officers, collection managers of aquaria and zoological gardens and with suitable teaching qualifications primary and secondary teachers. Further postgraduate studies including research training either in Australia or overseas, can also lead to students becoming research scientists in a specific field, museum curators or even a university academic.

## Participation requirements

Students are required to complete units in Trimester 3.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply a broad and coherent knowledge of chemistry, zoology and their environment to demonstrate an in-depth knowledge of scientific concepts and methods in the study of zoology and animal science. Apply technical knowledge and skills and use them in a range of activities, in a professional setting; this application of technical knowledge and skills being characterised by demonstrable in-depth knowledge of scientific methods and tools; and demonstrable proficiency in the utilisation of scientific facts, principles and practices. Demonstrate an integrated knowledge, autonomy, well-developed judgement and responsibility to investigate, test, analyse, and evaluate scientific data and to argue about characteristics and aspects of scientific theories in the advancement of zoology and animal science.
Communication	Use oral, written, graphical and interpersonal communication skills to accommodate, encourage, and answer audience questions in a professional manner. Present details of scientific procedures, key observations, results and conclusions using appropriate scientific language and conventions to share and disseminate information and knowledge in a clear and coherent manner.
Digital literacy	Apply well-developed scientific information literacy skills to independently locate, interpret, evaluate the merits of, and synthesise information in a digital world using an advanced working knowledge of relevant bibliographic software applications. Reflect on, create and ethically share knowledge and information to a variety of audiences to demonstrate the ability to adapt knowledge and skills in diverse contexts.
Critical thinking	Locate and evaluate scientific information from multiple sources and use scientific methods and frameworks to structure and plan observations, experimentation or fieldwork investigations. Use critical and analytical thinking and judgement to analyse, synthesise and generate an integrated knowledge, formulate hypotheses and test them against evidence-based scientific concepts and principles in the field of zoology and animal science.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Use initiative and creativity in planning, identifying and using multiple approaches to recognise, clarify, construct and solutions to real world (authentic) problems in zoology and animal science. Advocate scientific methodologies, hypotheses, laws, facts and principles to create solutions to authentic real world problems in zoology and animal science taking into account relevant contextual factors.
Self-management	Take personal, professional and social responsibility within changing professional science contexts to develop autonomy as learners and evaluate own performance. Work autonomously, responsibly, ethically and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.
Teamwork	Work independently and collaboratively as a team to contribute towards achieving team goals and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in diverse professional, social and cultural contexts.
Global citizenship	Apply scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with others to articulate the place and importance of zoology and animal science in the local and global context.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Zoology and Animal Science, students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 18 credit points of core (prescribed) units
- 6 credit points of electives (which can be taken from any area of the University, or can be used to specialise in another area)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit-point compulsory unit)
- Completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- No more than 10 credit points at level 1
- At least 6 level 3 units

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

- STP050 Academic Integrity (0 credit points)  
 SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit points)  
 SLE111 Cells and Genes  
 SLE103 Ecology and the Environment  
 SLE133 Chemistry in Our World <sup>^</sup> or one elective unit

plus one elective unit

##### Trimester 2

- SLE132 Biology: Form and Function  
 SLE123 Physics for the Life Sciences  
 SLE102 Physical Geography  
 SLE155 Chemistry for the Professional Sciences <sup>^</sup> or one elective unit

<sup>^</sup> Note: Students must complete at least one Chemistry unit (SLE133 Chemistry in Our World or SLE155 Chemistry for the Professional Sciences). Students who have not completed Year 12 Chemistry or equivalent may choose to do SLE133 Chemistry in Our World in Trimester 1. Students who have completed Year 12 Chemistry or equivalent may choose to do SLE155 Chemistry for the Professional Sciences in Trimester 2.

#### Level 2

##### Trimester 1

- SLE204 Animal Diversity  
 SLE251 Research Methods and Data Analysis  
 SLE263 Marine and Coastal Ecosystems <sup>^</sup>

plus one elective unit

##### Trimester 2

- SLE205 Vertebrate Structure and Function  
 SLE254 Genetics and Genomics  
 SLE224 Animal Behaviour

plus one elective unit

##### Trimester 3

- SLE355 Zoological Field Studies (Tri-3)

#### Level 3

##### Trimester 1

- SLE301 Professional Practice <sup>^</sup>  
 SLE341 Ecological and Conservation Genetics  
 SLE370 Evolution  
 SLE397 Sensory Neurobiology and Behaviour

##### Trimester 2

- SLE354 Disease Ecology and Epidemiology

plus two elective units

<sup>^</sup> Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

#### Electives

Select from the range of elective units offered across many courses, including, in some cases, the option to choose elective units from a completely different field (subject to meeting unit requirements).

It is important to note that some elective units may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

## Work experience

The course includes a compulsory professional practice unit that requires you to undertake at least 80 hours of work experience in a course-related host organisation. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Environmental Science (Wildlife and Conservation Biology)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Environmental Science (Wildlife and Conservation Biology)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	055286D
<i>Deakin course code</i>	S393
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Study the Bachelor of Environmental Science (Wildlife and Conservation Biology) at Deakin and you'll get out of the classroom and into nature, learn how to capture and handle native animals, measure the health of ecosystems, survey wildlife populations and develop conservation strategies.

This course is ideally suited to those who are passionate about wildlife and conservation as it focuses on 'real-world' problem solving and applied solutions to wildlife and conservation issues. Throughout your studies you will acquire knowledge, skills and practical expertise in a range of areas including biodiversity, wildlife ecology, landscape, habitat and vegetation management, conservation, animal biology and park management.

Deakin has a long history of offering specialised courses in environmental science. The Bachelor of Environmental Science (Wildlife and Conservation Biology) was the first course to be offered in Victoria with a major focus on the ecology of wildlife and conservation.

There is a strong focus on fieldwork and hands-on experience including a field studies camp in each year of the course, professional work placements within environmental agencies and extensive opportunities for enhancing your study with overseas study experiences.

You'll participate in a range of hands-on experiences, including regular practical classes and extended wildlife field trips. Professional work placements are a feature of this course and students are encouraged to volunteer in local, regional and international environmental programs. This strong focus on professional skills development will prepare you for an exciting career in the industry.

Graduates are qualified for careers in wildlife conservation and management, and in environmental science more generally. Choose from roles such as wildlife officer, conservation officer, wildlife manager, park ranger, project officer, environmental consultant, research scientist, wildlife biologist, conservation biologist and landscape ecologist.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

As a graduate of the Bachelor of Environmental Science (Wildlife and Conservation Biology) you will be qualified for a career in wildlife conservation and management, or in environmental science more generally, and ready to take up challenging roles such as wildlife officer, conservation officer, wildlife manager, park ranger, project officer, environmental consultant, research scientist, wildlife biologist, conservation biologist and landscape ecologist. Opportunities exist to work with wildlife – including their habitats and threats – and the policies and strategies that guide management. Graduates obtain jobs in the private, government and not-for-profit sectors.

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin’s website for more information.

Students commencing in Trimester 3 will be required to complete units in Trimester 3.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Course expenses

In addition to student contribution fees, students may be required to meet their own expenses in connection with food and accommodation while on fieldwork.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate a broad and coherent theoretical, applied and technical knowledge of wildlife and conservation biology, with particular knowledge of its relevance and application to biodiversity conservation. Use a broad set of field techniques and approaches to contribute to research and/or monitoring programs in field locations.
Communication	Clearly and coherently communicate information, conclusions and arguments regarding wildlife conservation and ecosystem management to a range of audiences for a range of purposes and using a variety of modes.
Digital literacy	Demonstrate and apply technologies to find, use, critically evaluate and, where appropriate, share scientifically valid information pertaining to wildlife and conservation biology.

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	Identify and evaluate the importance of topical issues, problems and questions in wildlife and conservation biology. Evaluate, select and integrate established knowledge to formulate potential solutions to issues regarding biodiversity conservation.
Problem solving	Apply traditional and contemporary information technologies and methods to scope and solve real world (authentic) problems in discipline-specific and professional contexts. Develop appropriate hypotheses, collect relevant data and apply contemporary analytical tools and approaches, to solve environmental issues and interpret the findings.
Self-management	Take personal, professional and social responsibility for their own learning, including the capacity to engage in life-long learning by reflecting on learning, working responsibly and safely, understanding and demonstrating appropriate ethical conduct and behaviour. Demonstrated ability to document and show evidence of skills, attributes and experiences relevant to making the transition into the professional sphere.
Teamwork	Engage in, and contribute to, effective teams to deliver high quality, coherent outcomes.
Global citizenship	Recognise the social, cultural, ethical and economic drivers of environmental change, both locally and globally. Apply cultural awareness and professionalism in the workplace and/or academic settings. Integrate cultural and social considerations into possible wildlife conservation and management through appreciation of, and effective consultation with, key stakeholders.

# Bachelor of Fisheries and Aquaculture

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Fisheries and Aquaculture
<i>Campus</i>	Warrnambool – For students who commenced prior to 2016
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	075367D
<i>Deakin course code</i>	S394

*The final intake to this course version was in 2015. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Fisheries and Aquaculture is one of only a few courses to offer a combination of fisheries and aquaculture in one program. The course provides you with comprehensive training in fisheries resource management, aquaculture management, and fisheries biology, with a focus on environmental sustainability, particularly renewable resource exploitation and culture of marine and freshwater species. You will learn about fisheries and aquaculture from a global perspective, including topics such as fish markets, nutrition and farm certification processes, the history of Australian fisheries, fisheries methods and impacts of fishing.

The course also includes studies in marine and freshwater biodiversity, ecology and behaviour, research methods, Geographic Information Systems (GIS) and remote sensing, and environmental chemistry. Fieldtrips and professional practice activities provide you with the opportunity to gain practical, hands-on skills.

The course is focused on developing graduates with strong research and management capabilities with skill sets for a wide variety of work environments. In addition to employment in the fisheries and aquaculture fields, as a graduate you may also find career opportunities in areas such as food and agriculture-based industries, quarantine, wildlife biology, government environmental monitoring, private environmental consulting and museums. Graduating students have the opportunity to undertake further studies in existing honours and PhD programs.

Units in the course may include assessment hurdle requirements.

## Career opportunities

South East Asia is recognised as the epicentre of a global aquaculture industry in terms of volume and innovation, and represents a valuable regional employment opportunity for graduates. Students will be capable of fulfilling roles within fisheries management organizations such as DPI (Victoria), ABARE, AFMA and regional CMA's with expertise in freshwater systems. Further, graduates may find employment in wider industries such as food and agriculture, quarantine, wildlife biology, government environmental monitoring, private environmental consulting and museums.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

The course comprises a total of 24 credit points, which must include the following:

- 20 core units
- 4 elective units (which can be taken from any area of the University)
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit-point compulsory unit)
- Completion of STP010 Introduction to Work Placements (0 credit-point compulsory unit)
- No more than 10 credit points at level 1
- At least 6 level 3 units, of which 4 must be course grouped to the Faculty of Science, Engineering and Built Environment units.

# Bachelor of Environmental Science (Environmental Management and Sustainability)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Environmental Science (Environmental Management and Sustainability)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	075361K
<i>Deakin course code</i>	S398
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Environmental management is a multidisciplinary field that focuses on finding solutions to the world's most pressing environmental problems. Throughout the degree, you'll explore ways to manage the interaction between people and the environment, as well as how to satisfy society's needs for clean water, fresh air and healthy soils through the sustainable use of natural resources.

You'll learn valuable field skills in environmental science such as animal and plant identification, water quality analysis, use of global positioning systems (GPS), geographic information systems (GIS) and remote sensing, and environmental impact assessment. You'll also explore the roles that science and society play in issues such as climate change, biodiversity conservation and environmental sustainability. Skills will be developed in the classroom and through an extensive field work program where you will visit sites including urban, coastal and national parks, community environment and sustainability centres, sites important for their natural and cultural heritage, business and industry. You'll also have the opportunity to steer your studies towards your interests and career aspirations by choosing elective units in areas such as wildlife management, coastal and marine management, environmental health and environmental sustainability.

With an emphasis on fieldwork and industry-based learning, you'll graduate with practical skills that can be directly applied to your future career. You'll be qualified to work in areas such as environmental management, pollution control, land rehabilitation, wildlife management and conservation, water resources management, environmental and sustainability science.

Once you've gained five years' experience working in the environmental industry, you'll be eligible to become a Certified Environmental Practitioner through the Environment Institute of Australia and New Zealand.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

As a graduate of the Bachelor of Environmental Science (Environmental Management and Sustainability) degree you may choose to pursue opportunities in a wide variety of careers such as environmental planning, environmental policy, sustainability, environmental protection, climate change adaptation and mitigation, industry-based environmental management, waste management, environmental education, catchment management, water resource management, land rehabilitation, pollution control, environmental science, conservation, and coastal and park management.

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Course expenses

In addition to student contribution fees, students should be aware that they may be required to meet their own expenses in connection with food and accommodation while on fieldwork.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate a broad and coherent knowledge of the environmental sciences (natural and social sciences) and a depth of knowledge in environmental management and sustainability. Integrate and apply knowledge and skills, safely, ethically and objectively, within a range of diverse contexts – professional, community, lab and field settings.
Communication	Communicate information, conclusions and arguments clearly and coherently to specialist and non-specialist audiences for a range of purposes and in a variety of modes.
Digital literacy	Identify and use appropriate digital technologies to locate and evaluate information and communicate with a range of stakeholders in environmental management and sustainability.
Critical thinking	Critically analyse and evaluate information from an interdisciplinary range of sources in order to define and provide solutions to real-world environmental problems integrating the principles of the triple-bottom line.
Problem solving	Apply traditional and emerging information, technologies and methods to collect, record, collate, investigate and solve real world and ill-defined problems in environmental management and sustainability.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Demonstrate an ability to work and learn independently and take responsibility for personal actions by: undertaking self-directed learning; working responsibly, safely and ethically in evolving contexts within the field of environmental management and sustainability.
Teamwork	Demonstrate responsibility and accountability when undertaking different roles to work effectively, ethically and safely in diverse team contexts.
Global citizenship	Articulate the diverse array of professional, academic and community contexts in which environmental management and sustainability graduates may work. Explain ethical practices and recognise the social, political, economic and environmental contexts relevant to professional conduct within which environmental management and sustainability are practiced globally.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Environmental Science (Environmental Management and Sustainability), students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points, which must include the following:

- 15 core units
- 9 elective units
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- No more than 10 credit points at level 1
- At least 14 credit points over Levels 2 and 3

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

- STP050 Academic Integrity (0 credit points)
- SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit points)
- SLE103 Ecology and the Environment
- SLE101 Techniques in Environmental Science

plus two elective units

##### Trimester 2

- SLE102 Physical Geography
- SLE121 Environmental Sustainability
- STP010 Introduction to Work Placements (0 credit points)

plus two elective units

## Level 2

### Trimester 1

- SLE201 Society and Environment
- SLE231 Hydrology and Water Resources Management
- SLE218 Indigenous Engagement: Natural Resource Management

plus one elective unit

### Trimester 2

- SLE207 Environmental Planning and Impact Assessment
- SLE226 Environmental Team Based Research

plus two elective units

## Level 3

### Trimester 1

- SLE301 Professional Practice #
- SLE303 Managing Environmental Projects
- SLE305 Integrating Marine, Coastal and Catchment Management

plus one elective unit

### Trimester 2

- SLE308 Policy Instruments for Sustainability
  - SLE332 Geographic Information Systems for Environmental Scientists
- plus
- SLE342 Risks to Healthy Environments or
  - SLE320 Resource Efficiency and Waste Management (Tri-3)

plus one elective unit

# Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

## Electives

Select from the range of elective units offered across many courses, including, in some cases, the option to choose elective units from a completely different field (subject to meeting unit requirements).

It is important to note that some elective units may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

## Work experience

The course includes a compulsory professional practice unit that requires you to undertake at least 80 hours of work experience in a course-related host organisation. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Environmental Science (Marine Biology)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Environmental Science (Marine Biology)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurm Ponds (Geelong), Warrnambool
<i>Cloud Campus</i>	No
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	053749E
<i>Deakin course code</i>	S399
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 7.

## Course overview

Deakin's marine biology course is offered at two fantastic coastal locations. The Warrnambool Campus, which is situated on the banks of the Hopkins River estuary at the western end of the Great Ocean Road; and the Waurm Ponds Campus (Geelong) which is situated close to the Surf Coast. Students enrolled at Geelong also have access to the Queenscliff Marine Research Centre on the shore of Swan Bay.

The Warrnambool Campus and Queenscliff Marine Research Centre offer a range of amazing marine habitats and ecosystems, and provide you with the opportunity to study temperate marine biology in a marine environment that has some of the highest biodiversity in Australia. Through extensive hands-on laboratory and fieldwork experiences, you will discover the great diversity of marine plants and animals that exists in coastal and oceanic ecosystems, and learn how to sustainably manage precious marine and coastal environments and resources.

The course has a strong ecological focus, linking biological and oceanographic processes in the study of marine environments. You will learn about a range of marine and coastal ecosystems, from coral reefs to icebergs, estuaries to oceans and from surf zones to the deep abyss. You will also investigate, and directly observe, how marine ecosystems function and how marine organisms interact with their living and non-living environments.

Throughout the course, you will acquire a strong understanding of environmental sustainability, and use scientific methods and tools to practice sustainable management of natural resources within marine and coastal environments, relevant to both Australia and overseas.

You will gain stimulating hands-on experience through fieldwork in natural marine and coastal environments along the Victorian coast, including the Great Ocean Road and Port Phillip Bay. You will develop knowledge associated with scientific research methods, impact assessments and marine and coastal management by conducting fieldwork in estuaries; intertidal rocky shores; shallow marine habitats, such as seagrass beds; and also sandy beaches. You will also have the opportunity to work with government and non-government organisations including Parks Victoria, Catchment Management Authorities, aquaculture industries, environmental consultants, Fishcare and Friends of the Merri, on specific volunteer projects and during professional practice placements.

Elective options also provide you with the opportunity to study tropical marine environments within Australia and gain a broader view of the world by electing to study and volunteer overseas.

The professional practice unit involves a placement within a relevant, course-related organisation within either Australia or overseas. Specific field visits involving industry partners and guest speakers from a range of relevant employers also contribute to this course. This provides you with an opportunity to begin networking with potential employers and prepares you to be 'job-ready' on completion of the course.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

Students can expect to participate in a range of teaching activities each week. This could include classes, seminars, field trips, practicals and online interaction. Individual unit details in the course structure provide specific information relating to teaching activities in each unit. Students also need to study and complete assessment tasks in their own time.

## Career opportunities

Career opportunities for graduates include marine ecotourism, marine education (e.g. marine aquaria), park rangers, fisheries and EPA compliance officers, biosecurity officers, aquaculture technicians and management, marine biology consultants, laboratory technicians, museum employment, local government environmental officers, sustainability project officers, employees of local water authorities and catchment management authorities, marine ecotourism guides and GIS analysts. Further opportunities include working in scientific research institutes and pursuing postgraduate study. The development of broad generic skills by students during the course also make students more broadly employable across the environmental science and management sectors.

## Participation requirements

Students enrolled at the Geelong Waurin Ponds Campus will be required to undertake some of their practical learning experiences at the Queenscliff Marine Research Centre.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Course expenses

In addition to student contribution fees, students should be aware that they may be required to meet their own expenses in connection with travel, food and accommodation while on fieldwork.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Appreciate the structural make up of coastal and marine environments, their physical and chemical characteristics and interaction to recognise how organisms live and exist in dynamic environments. Articulate the form and functions of organisms and how they manage environmental challenges in highly diverse and dynamic environments. Assess habitats and organisms and recognise sustainability issues and concerns to manage and conserve animals and plants within marine environments and to evaluate sustainability.
Communication	Use appropriate scientific language and formats including written, visual, oral and graphical forms to communicate with a range of audiences, including the general public, environmental managers and scientists. Generate, analyse and present key information in a professional manner with evidence from local, national, and international contributions and contexts.
Digital literacy	Use well developed technical skills and judgement to locate, analyse and synthesise information and responsibly disseminate information using a variety of tools and techniques.
Critical thinking	Locate and evaluate scientific information from multiple sources and use scientific methods and frameworks to structure and plan observations, experimentation, fieldwork investigations and to undertake environmental impact and risk assessment. Use critical and analytical thinking and judgement to analyse, synthesise and generate an integrated knowledge, formulate hypotheses and test them against evidence-based scientific concepts and principles in the context of aquatic environment.
Problem solving	Identify possible causes, effects and underlying environmental problems, brainstorm potential solutions, and develop criteria for evaluating those solutions. Provide specialist advice to solve environmental problems by designing and planning investigations and using scientific tools and techniques to apply systems and management perspectives to formulate future sustainability and conservation solutions to problems.
Self-management	Work independently and responsibly with initiative and judgement to function safely and professionally in a manner that assimilates feedback and incorporates reflection for future learning and ethical practice.
Teamwork	Collaboratively work with others in order to critically analyse, problem solve, develop and manage plans for generating sustainable processes and solutions to manage and conserve the environment.
Global citizenship	Adopt and value multidisciplinary knowledge and perspectives for evaluating, integrating and incorporating strategies and solutions in scoping, planning and managing alternative sustainable solutions from local to global environmental problems. Adopt, appreciate and respect scientific morals and ethics, including working with animals.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Environmental Science (Marine Biology), students must attain 24 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 24 credit points, you'll need to study and successfully complete 24 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 24 credit points which must include the following:

- 21 core units
- 3 elective units
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit-point compulsory unit)
- Completion of STP010 Introduction to Work Placements (0 credit-point compulsory unit)
- level 1 – up to 10 credit points

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Level 3

### Trimester 1

- SLE301 Professional Practice #  
 SLE348 Freshwater Biology (code and title change to SLE349 – Catchments to Coasts: Ecological Health from 2020 offered in T2/20)  
 SLE304 Geographic Information Systems: Uses in Aquatic Environments

plus one elective unit

### Trimester 2

- SLE315 Marine Animal Physiology  
 SLE319 Environmental Protection and Planning (removed from Warrnambool from 2020, replaced with SLE305 – Integrating Marine, Coastal and Catchment Management offered in T1/20)  
 SLE325 Marine Ecotoxicology and Risk Assessment

plus one elective unit

# Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

## Work experience

The course includes a compulsory professional practice unit that requires you to undertake at least 80 hours of work experience in a course-related host organisation. You'll gain practical experience by completing a two week placement at a course-related host organisation to provide you with opportunities for workplace visits, field trips, industry learning and to establish valuable networks – giving you better insight into your possible career outcomes.

You'll also have the opportunity to undertake a discipline-specific industry placement as part of your course. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

Elective units may also provide additional opportunities for Work Integrated Learning experiences.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Bachelor of Science (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Science (Honours)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne), Waurn Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	063355G
<i>Deakin course code</i>	S400
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Deakin's Bachelor of Science (Honours) provides you with exposure to a range of possible career paths and a deep understanding of your chosen discipline through research exploration in either life and environmental sciences, chemistry or mathematics. You will get the chance to undertake focused research in your area of interest and develop skills before launching into a successful career.

You will be exposed to research of national and international significance and acquire generic skills in research design and implementation, critical thinking and data analysis, digital literacy and scientific communication. You will also develop valuable skills for life-long learning; an essential professional attribute in this ever-evolving field.

The coursework component of the honours program provides you with essential knowledge in areas that underpin research – experimental design, quantitative analysis and science professionalism. The research project component enables you to develop the research skills necessary to investigate an area of interest.

You will have the support and supervision of our experienced staff throughout your honours program and will graduate with skills that provide you with a competitive edge in the job market and an ideal pathway to further study and research training (including Masters and PhD programs).

## Career opportunities

The Bachelor of Science (Honours) will produce high quality graduates with the generic skills, theoretical knowledge, and specialised practical skills to either gain employment in their relevant discipline (Biology, Chemistry or Mathematics) or to succeed in further study such as Higher Degrees by Research.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Graduates will have advanced theoretical and technical knowledge in one of biology, chemistry or mathematics.
Communication	Communicate effectively the design and outcomes of research using a range of verbal, graphical and written forms customised for diverse audiences.
Digital literacy	Utilise a range of digital technologies and information sources to discover, select, analyse, employ, evaluate, critique, and disseminate outcomes from the research project.
Critical thinking	Use critical and analytical thinking to identify problems and the design of solutions using established theories, models, constructs and practice.
Problem solving	Apply theoretical constructs, advanced skills and critical analysis to demonstrate well developed judgement adaptability and evaluation of solutions to research problems.
Self-management	Develop and apply knowledge and skills in creative ways to demonstrate advanced levels of autonomy, initiative and ethical and professional behaviour in research.
Teamwork	Work independently and/or collaboratively within a research team, receiving advice and guidance from supervisor/s that contributes to achieving the outcomes of the Honours project.
Global citizenship	Apply scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with stakeholders to articulate the place and importance of scientific inquiry in the local and global context.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Science (Honours), students must attain 8 credit points.

The 8 credit points include:

- 6 core units within your chosen specialisation
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

Students are required to complete all units within one of the following discipline areas:

#### **Biology – unit set code SP-S000066**

STP050	Academic Integrity (0 credit points)
SLE420	Honours Biology Research 1A
SLE421	Honours Biology Research 1B
SLE422	Honours Biology Research 2 (2 credit points)
SLE423	Honours Biology Research 3 (2 credit points)
SLE451	Science Professionalism
SLE452	Research Design and Data Analysis

**Chemistry – unit set code SP-S000067**

STP050	Academic Integrity (0 credit points)
SLE430	Honours Chemistry Research 1A
SLE431	Honours Chemistry Research 1B
SLE432	Honours Chemistry Research 2 (2 credit points)
SLE433	Honours Chemistry Research 3 (2 credit points)
SLE451	Science Professionalism
SLE453	Advanced Topics in Chemistry

**Mathematics – unit set code SP-S000068**

STP050	Academic Integrity (0 credit points)
SLE451	Science Professionalism
SLE452	Research Design and Data Analysis
SIT490	Honours Mathematics Research 1 (2 credit points)
SIT492	Honours Mathematics Research 2 (2 credit points)
SIT493	Honours Mathematics Research 3 (2 credit points)

**Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

**Projects and supervision – additional information**

As part of your application for this course, you will be required to first contact potential supervisors and discuss projects. Once you have met with a supervisor and agreed on a project, you will need to complete an application form and submit this via the Deakin applicant portal. Visit Deakin's website for more information.

See potential projects and supervisors for Honours at Burwood (Melbourne) or Waurn Ponds (Geelong).

**Research and research-related study**

The research project provides the practical skills necessary to deliver a strong foundation in research. Thesis preparation will include an introduction to research methodologies appropriate to the discipline including associated methods, processes and practice. You will work with a member of staff who is experienced in research and who can assist you to gain insight into research and independent investigation. Staff use their research experience and industry skills to ensure that the research projects and course delivery methods are current.

# Bachelor of Forensic Science (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Forensic Science (Honours)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurn Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	060342C
<i>Deakin course code</i>	S401
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Enhance your undergraduate qualifications and gain valuable research skills with an honours year in forensic science. This course is designed to broaden your knowledge, give you a competitive edge in the job market, and pave the way for possible further study in forensic science.

Honours is an optional specialised year of study that allows you to draw together the theory and practical skills gained in previous undergraduate studies. You'll refine your analytical and research skills while expanding employment and study options. You'll develop an in-depth knowledge of the discipline of forensic science through research, additional coursework, and training in research techniques in partnership with professional forensic scientists.

You'll get formal training in the skills and techniques needed for modern forensic science, including the examination and presentation of scientific evidence to solve crimes.

Our teaching and research staff are experts in their respective fields, with broad national and international links and experiences. Much of Deakin's research in forensic science is conducted in partnership with government departments, private agencies, and leading international scientists, and is funded by nationally and international grants.

As a graduate of this course you'll have a distinct advantage when applying for roles in areas such as forensics, insurance investigation, risk analysis, research science, government institutions and within chemical, food, and pharmaceutical industries.

## Professional recognition

The Bachelor of Forensic Science (Honours) has been professionally accredited by the Chartered Society of Forensic Sciences. Graduates of this course are encouraged to apply for membership of the Australian and New Zealand Forensic Science Society (ANZFSS).

## Career opportunities

A Forensic Science degree is a great way for you to start a career in science. In addition to the normal wide range of job opportunities, this degree sharpens your communication skills and opens new doors into fields such as risk analysis, insurance investigation, and, of course, forensic science.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Graduates will have advanced theoretical and technical knowledge in one of forensic biology or forensic chemistry.
Communication	Communicate effectively the design and outcomes of research using a range of verbal, graphical and written forms customised for diverse audiences.
Digital literacy	Utilise a range of digital technologies and information sources to discover, select, analyse, employ, evaluate, critique, and disseminate outcomes from the research project.
Critical thinking	Use critical and analytical thinking to identify problems and the design of solutions using established theories, models, constructs and practice.
Problem solving	Apply theoretical constructs, advanced skills and critical analysis to demonstrate well developed judgement adaptability and evaluation of solutions to research problems.
Self-management	Develop and apply knowledge and skills in creative ways to demonstrate advanced levels of autonomy, initiative and ethical and professional behaviour in research.
Teamwork	Work independently and/or collaboratively within a research team, receiving advice and guidance from supervisor/s that contributes to achieving the outcomes of the Honours project.
Global citizenship	Apply scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with stakeholders to articulate the place and importance of scientific inquiry in the local and global context.

*Approved by Faculty Board 7 June 2018*

## Course rules

To complete the Bachelor of Forensic Science (Honours), students must attain 8 credit points.

The 8 credit points include:

- 6 core units within your chosen specialisation
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050 Academic Integrity (0 credit points)

Choose one of the following specialisations:

#### **Forensic Biology – unit set code SP-S000078**

SLE452 Research Design and Data Analysis  
 SLE454 Advanced Topics in Forensic Science  
 SLE420 Honours Biology Research 1A  
 SLE421 Honours Biology Research 1B  
 SLE422 Honours Biology Research 2 (2 credit points)  
 SLE423 Honours Biology Research 3 (2 credit points)

#### **Forensic Chemistry – unit set code SP-S000079**

SLE430 Honours Chemistry Research 1A  
 SLE431 Honours Chemistry Research 1B  
 SLE432 Honours Chemistry Research 2 (2 credit points)  
 SLE433 Honours Chemistry Research 3 (2 credit points)  
 SLE453 Advanced Topics in Chemistry  
 SLE454 Advanced Topics in Forensic Science

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### Projects and supervision – additional information

As part of your application for this course, you will be required to first contact potential supervisors and discuss projects. Once you have met with a supervision and agreed on a project, you will need to complete an application form and submit this via the Deakin applicant portal. Visit Deakin's website for more information.

See potential projects and supervisors for Honours at Waurn Ponds (Geelong).

### Research and research-related study

The research project provides the practical skills necessary to deliver a strong foundation in research. Thesis preparation will include an introduction to research methodologies appropriate to the discipline including associated methods, processes and practice. You will work with a member of staff who is experienced in research and who can assist you to gain insight into research and independent investigation. Staff use their research experience and industry skills to ensure that the research projects and course delivery methods are current.

# Bachelor of Civil Engineering (Honours)

Year	2019 course information
Award granted	Bachelor of Civil Engineering (Honours)
Campus	Waurin Ponds (Geelong) – For students who commenced prior to 2016
Duration	4 years full-time or part-time equivalent
CRICOS course code	079998G
Deakin course code	S460 (version 1)

*The final intake to this course version was in 2015. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Civil Engineering (Honours) places great emphasis on the practical application of engineering and scientific principles to produce industry-ready engineers, who are immediately employable and capable of adapting to an ever-changing future.

The degree gives you the building blocks to plan, design, construct and maintain the infrastructure systems that are necessary for our day-to-day lives such as roads, airports and railways; water supply and sewerage systems; water resources management; and buildings. This course covers the broad range of civil engineering disciplines including engineering materials, structural engineering, water engineering, geotechnical engineering and transport engineering.

You will learn generic skills, including entrepreneurship, innovation and leadership, project management, technical report writing and presentation, and comprehension and communication. You will also develop an understanding of the ethical basis of the engineering profession and practice, contemporary technical and professional issues in the practice of engineering, as well as how to address complex problems and produce innovative solutions beneficial to an organisation and society.

You will also gain a sound, fundamental understanding of the scientific principles underlying technology; learn the basic principles underlying the management of physical, human and financial resources; acquire the mathematical and computational skills necessary for solving theoretical and practical problems and for meeting future changes in technology; and gain an understanding of the social, cultural, global and environmental responsibilities of the professional engineer.

Units in the course may include assessment hurdle requirements.

## Professional recognition

Deakin's Bachelor of Civil Engineering (Honours) is accredited by Engineers Australia, which gives the degree international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Career opportunities

Graduates can expect to gain employment in a wide range of organisations such as construction companies, councils, water authorities, government bodies, public works departments and as consulting engineers.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud (online) enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud (online) enrolled students may be required to attend campus mode conducted activities during the corresponding intensive week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

*Note: Students enrolled in the off campus or Cloud (online) mode will be required to attend campus based activities at scheduled sessions during the trimester intensive week. Cloud (online) international students will be required to obtain a visitor visa to undertake these campus based activities. International students are unable to apply for a student visa for this course.*

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Engineering professional practice sequence

A series of professional practice units have been introduced as core requirements of the undergraduate Engineering courses. These four units (one at each year level) are intended to enable students to increase their awareness of various generic engineering, technological and professional practice skills, and how those skills are applied in the workplace. There will be an emphasis on group activities and assessment and a focus on the 'real' world.

## Work experience

Before students will be deemed eligible to graduate they must obtain an aggregate of at least 12 weeks of suitable practical experience during their program. Work experience would normally be gained during the vacation periods. Further details are contained in the unit description for SEP490 Engineering Work Experience.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

- 30 core units and 2 Engineering elective units
- completion of SEE010 Safety Induction Program or SEJ010 Introduction to Safety and Project Oriented Learning (0 credit-point compulsory units)
- a maximum of 10 credit points at Level 1
- a minimum of 22 credit points combined over levels 2, 3 and 4
- a minimum of 6 credit points at level 4
- completion of SEP490 – 12 Week Engineering Work Experience (0 credit points)
- Cloud (online) enrolled students may be required to attend campus mode conducted activities during the corresponding intensive week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

# Bachelor of Civil Engineering (Honours)

Year	2019 course information
Award granted	Bachelor of Civil Engineering (Honours)
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Offered at Burwood (Melbourne)*, Waurin Ponds (Geelong)
Cloud Campus	Yes
Duration	4 years full-time or part-time equivalent
CRICOS course code	079998G
Deakin course code	S460 (version 2)
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

\* Only the first year of this Engineering program is available at the Melbourne Burwood Campus. Students enrolled at the Melbourne Burwood Campus will be required to transfer to the Geelong Waurin Ponds Campus or Cloud (online) mode for the second year of their program.

*International students holding student visas – this course is registered for delivery to student visa holders at Geelong Waurin Ponds campus.*

## Course overview

Deakin's Bachelor of Civil Engineering (Honours) prepares you to be an industry-ready civil engineer capable of planning, designing, constructing and maintaining the built infrastructure systems that are necessary for our day-to-day lives including buildings, transportation networks, water and wastewater systems. Our student-centred learning environment means you'll have access to world-class facilities and research opportunities.

This course covers the broad range of civil engineering disciplines related to structural, water, geotechnical, transportation engineering and civil engineering materials.

Throughout the course you'll learn how to apply scientific and engineering principles to real-life engineering problems. You'll learn how to address complex problems and develop innovative solutions that are beneficial to an organisation and the wider community. You will also gain an insight into the social, cultural, global and environmental responsibilities of the modern engineer while designing civil engineering infrastructures which meet international standards and encompass best practice. Furthermore, you will develop an understanding of the ethical considerations and contemporary technical issues in the practice of engineering.

As a graduate of this course, you'll be highly sought-after by industry for your skills in engineering, innovation, leadership, project management and communication, as well as your capacity to astutely anticipate and tackle the unknown challenges of tomorrow.

Accredited by Engineers Australia, this course is recognised internationally and enables you to practice as a professional engineer in many countries around the world. With an international skills shortage in the civil engineering industry, Deakin graduates are in demand.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Deakin's Bachelor of Civil Engineering (Honours) is accredited by Engineers Australia, which gives the degree international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Career opportunities

Graduates can expect to gain employment in a wide range of organisations such as construction companies, councils, water authorities, government bodies, public works departments and as consulting engineers.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud Campus enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

International students: Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin's Cloud Campus. To participate in the mandatory campus based scheduled sessions during the trimester intensive week, it is suggested that you apply for a tourist visa to enter Australia. Please be advised that Deakin University cannot guarantee that you will be granted a tourist visa by the Australian Government.

International students studying through the Cloud Campus may not be granted a visitor visa to complete mandatory onsite components of the course.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Integrate well-developed knowledge of physical sciences and engineering fundamentals, which underpins the engineering discipline to analyse complex engineering problems and to evaluate possible solutions. Apply professional engineering knowledge, and knowledge of contextual factors in order to design, develop and maintain sustainable engineering infrastructure, systems or products. Plan and execute research projects to show capacity for advanced knowledge and skills in an engineering discipline and thereby demonstrate the ability to continue professional development and/or scholarship.
Communication	Apply effective communication skills in a professional context to interpret, evaluate and present technical engineering information using oral, written, visual modes. Demonstrate proficiency in comprehending viewpoints of others and present arguments and justifications for representing engineering position to technical and non-technical audience.
Digital literacy	Identify, select and use digital technologies and tools relevant to the engineering discipline to generate, manage and share information. Demonstrate the ability to independently and systematically locate information, evaluate its reliability, and use the information for engineering design, problem solving and research purposes.
Critical thinking	Demonstrate autonomy and judgement through balanced application of logic, intellectual and research criteria to review, analyse, and synthesise information for engineering problem solving.
Problem solving	Apply engineering knowledge, skills and techniques to identify and define complex problems in a variety of contexts. Evaluate and use established engineering methods to identify potential solutions to independently and collaboratively resolve complex engineering problems and realise solutions. Demonstrate innovative and creative approaches and/or solutions in planning, designing or executing engineering projects.
Self-management	Evaluate own knowledge and skills using frameworks of reflection and take responsibility for learning and performance. Work responsibly and safely in engineering environments to demonstrate professionalism.

Deakin graduate learning outcomes	Course learning outcomes
Teamwork	Undertake various team roles, work effectively within a team, and utilise effective teamwork skills in order to achieve learning goals. Apply interpersonal skills to interact and collaborate to enhance outcomes through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship	Formulate sustainable engineering practices by integrating aspects of design, development or research through concern for economic, environmental, social and cultural perspectives and values. Engage with global traditions and current trends in engineering practice in order to appreciate diversity, seek equity in outcomes and adopt ethical and professional standards.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Civil Engineering (Honours), students must attain 32 credit points. Units (think of units as 'subjects') are equal to 1 or 2 credit points, sometimes abbreviated as cps. Most students choose to study units amounting to 4 credit points (or cps) per trimester, and usually undertake two trimesters each year.

The course comprises a total of 32 credit points, which must include the following:

- 31 credit points of core units and 1 elective unit (1 credit point)
- completion of SEJ010 Introduction to Safety and Project Oriented Learning (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- Completion of SEP499 Professional Engineering Practice (12 weeks)
- Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programs, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SEJ010	Introduction to Safety and Project Oriented Learning (0 credit points)
SEJ101	Design Fundamentals (2 credit points)
SEB101	Engineering Physics
SIT199	Applied Algebra and Statistics

##### Trimester 2

SEJ103	Materials Engineering Project (2 credit points)
SIT194	Introduction to Mathematical Modelling
SIT172	Programming for Engineers

## Level 2

### Trimester 1

- SEV200 Geotechnical Investigation and Design (2 credit points)
- SEM218 Fluid Mechanics
- SEP291 Engineering Modelling

### Trimester 2

- STP010 Introduction to Work Placements (0 credit points)
- SEJ201 Structural Design (2 credit points)^
- SEV210 Construction Engineering
- SEV254 Road and Pavement Engineering

## Level 3

### Trimester 1

- SEV301 Water Engineering Design (2 credit points)
- SEV322 Hydrology and Hydraulics
- SEV320 Theory of Structures

### Trimester 2

- SEV300 Reinforced Concrete Design (2 credit points)
- SEV323 Steel and Timber Structures
- SEV362 Geotechnical Engineering

### Trimester 3

- SEP499 Professional Engineering Practice \*

## Level 4

### Trimester 1

- SEJ441 Engineering Project A (2 credit points)~
- SEV402 Traffic and Transport Engineering

Elective

### Trimester 2

- SEJ446 Engineering Project B (2 credit points)~
- SEV415 Infrastructure Engineering

\* SEP499 Professional Engineering Practice is also available in trimester 1 and trimester 2.

~ Note: Students are expected to undertake SEJ441 and SEJ446 in consecutive trimesters. Students will be required to seek approval from the unit chair if they are unable to complete SEJ441 and SEJ446 consecutively.

^ Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

## Electives

Engineering recommended elective units:

- SEE705 Energy Efficiency and Demand Management
- SEJ451 Materials Performance and Durability
- SEN725 Urban Stormwater Management
- SEN700 Research Methodology
- SEN727 Advanced Geomechanics \*
- SEN728 Transportation Infrastructure Systems
- SEN769 Advanced Structural Design \*
- SET404 Engineering Design: International Study Tour ^

^ Not offered in 2019

\* Available from 2020

## Work experience

Through SEP499 Professional Engineering Practice, you'll gain industry experience by completing at least 60 days (12 weeks fulltime) of practical work experience in an engineering workplace, developing and enhancing your understanding of the engineering profession, possible career outcomes, and the opportunity to establish valuable professional networks.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

In your final year of the course, you may apply to undertake an international study tour to engage in a structured program of study, usually involving short project work overseas to gain discipline specific technical expertise and to enhance your global engineering awareness and experience.

## Research and research-related study

The key assessment of research and research skills in the programme is through the two linked 2 credit point units in the final year of the course. The first of these units is for students to develop a detailed research proposal and undertake preliminary proof-of-concept or testing of their experimental methods. The second unit is designed to undertake the proposed research and critically evaluate the outcomes of the project. The project is predominantly student-led with direction from an academic supervisor that has expertise in the research field.

# Bachelor of Electrical and Electronics Engineering (Honours)

Year	2019 course information
Award granted	Bachelor of Electrical and Electronics Engineering (Honours)
Campus	Waurm Ponds (Geelong) – For students who commenced prior to 2016
Duration	4 years full-time or part-time equivalent
CRICOS course code	079997G
Deakin course code	S461 (version 1)

*The final intake to this course version was in 2015. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Electrical and Electronics Engineering (Honours) places great emphasis on the practical application of engineering and scientific principles to produce industry-ready engineers, who are immediately employable and capable of adapting to an ever-changing future.

Electrical and electronic engineers are responsible for the design, construction, protection and project management of power generation, distribution, transmission, scheduling and usage, automation and control.

This program covers the broad areas of electrical and electronic engineering disciplines, including renewable electrical power generation; smart distribution; urban, industrial, rural and regional power usage; and the role of energy production and efficiency in climate change. This course has been designed to attract students who can be trained to fulfil the shortage of electrical and electronic engineers. It also is designed to encourage responsible use of electrical power in a changing climate. You will learn and practice on industry standard tools in world-class facilities. The program also has strong links with the electrical and renewable energy engineering industry, providing students with a true professional engineering practice.

You will learn generic skills including entrepreneurship, innovation and leadership, project management, technical report writing and presentation, and comprehension and communication. You will also develop an understanding of the ethical basis of the engineering profession and practice, contemporary technical and professional issues in the practice of engineering, as well as how to address complex problems and produce innovative solutions beneficial to an organisation and society.

You will also gain a sound, fundamental understanding of the scientific principles underlying technology; learn the basic principles underlying the management of physical, human and financial resources; acquire the mathematical and computational skills necessary for solving theoretical and practical problems and for meeting future changes in technology; and gain an understanding of the social, cultural, global and environmental responsibilities of the professional engineer.

Units in the course may include assessment hurdle requirements.

## Professional recognition

Deakin's Bachelor of Electrical and Electronics Engineering (Honours) is accredited by Engineers Australia, which gives the degree international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Career opportunities

Graduates can expect to gain employment in power generation distribution and transmission organisations, electronic design, factory control, local government, public works and consulting.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud (online) enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud (online) enrolled students may be required to attend campus mode conducted activities during the corresponding intensive week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

*Note: Students enrolled in the off campus or Cloud (online) mode will be required to attend campus based activities at scheduled sessions during the trimester intensive week. Cloud (online) international students will be required to obtain a visitor visa to undertake these campus based activities. International students are unable to apply for a student visa for this course.*

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Engineering professional practice sequence

A series of professional practice units have been introduced as core requirements of the undergraduate Engineering courses. These four units (one at each year level) are intended to enable students to increase their awareness of various generic engineering, technological and professional practice skills, and how those skills are applied in the workplace. There will be an emphasis on group activities and assessment and a focus on the 'real' world.

## Work experience

Before students will be deemed eligible to graduate they must obtain an aggregate of at least 12 weeks of suitable practical experience during their program. Work experience would normally be gained during the vacation periods. Further details are contained in the unit description for SEP490 Engineering Work Experience.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

- 30 core units and 2 Engineering elective units
- completion of SEE010 Safety Induction Program or SEJ010 Introduction to Safety and Project Oriented Learning (0 credit-point compulsory units)
- a maximum of 10 credit points at Level 1
- a minimum of 22 credit points combined over levels 2, 3 and 4
- a minimum of 6 credit points at level 4
- completion of SEP490 – 12 Week Engineering Work Experience (0 credit points)
- Cloud (online) enrolled students may be required to attend campus mode conducted activities during the corresponding intensive week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

## Course overview

Deakin's Bachelor of Electrical and Electronics Engineering (Honours) prepares you to be an industry-ready professional engineer responsible for the design, construction, protection and project management of power generation, distribution, transmission, scheduling and usage, automation and control.

Our student-centred learning environment means you'll use industry standard tools in world-class facilities and benefit from strong links with leading organisations in the electrical and renewable energy industry throughout your course. You'll also have the chance to undertake real-life professional engineering practice and acquire transferrable skills in entrepreneurship, innovation, leadership, project management, technical report writing and more.

The course encourages the responsible use of electrical power in a changing climate, and covers a broad range of electrical and electronic engineering disciplines including renewable electrical power generation; smart distribution; urban, industrial, rural and regional power usage; and the role of energy production and efficiency in climate change. You'll also develop an understanding of the ethical considerations and contemporary technical issues in the practice of engineering.

Through project-oriented design-based learning (PODBL) you gain experience with real-life industry-related projects and acquire insights into how to best address complex problems and produce innovative solutions beneficial to an organisation and the wider community.

Deakin's Bachelor of Electrical and Electronics Engineering (Honours) is accredited by Engineers Australia, giving the degree international recognition and allowing graduates to practice as professional engineers in many countries around the world

With an international skills shortage in the engineering industry, Deakin graduates are in demand. As a graduate you can expect to gain employment in areas such as power generation distribution and transmission, electronic design, factory control, local government, public works and consulting.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Deakin's Bachelor of Electrical and Electronics Engineering (Honours) is accredited by Engineers Australia, which gives the degree international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Career opportunities

Graduates can expect to gain employment in power generation distribution and transmission organisations, electronic design, factory control, local government, public works and consulting.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud Campus enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

International students: Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin's Cloud Campus. To participate in the mandatory campus based scheduled sessions during the trimester intensive week, it is suggested that you apply for a tourist visa to enter Australia. Please be advised that Deakin University cannot guarantee that you will be granted a tourist visa by the Australian Government.

International students studying through the Cloud Campus may not be granted a visitor visa to complete mandatory onsite components of the course.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](https://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Integrate well-developed knowledge of physical sciences and engineering fundamentals, which underpins the engineering discipline to analyse complex engineering problems and to evaluate possible solutions. Apply professional engineering knowledge, and knowledge of contextual factors in order to design, develop and maintain sustainable engineering infrastructure, systems or products. Plan and execute research projects to show capacity for advanced knowledge and skills in an engineering discipline and thereby demonstrate the ability to continue professional development and/or scholarship.
Communication	Apply effective communication skills in a professional context to interpret, evaluate and present technical engineering information using oral, written, visual modes. Demonstrate proficiency in comprehending viewpoints of others and present arguments and justifications for representing engineering position to technical and non-technical audience.
Digital literacy	Identify, select and use digital technologies and tools relevant to the engineering discipline to generate, manage and share information. Demonstrate the ability to independently and systematically locate information, evaluate its reliability, and use the information for engineering design, problem solving and research purposes.
Critical thinking	Demonstrate autonomy and judgement through balanced application of logic, intellectual and research criteria to review, analyse, and synthesise information for engineering problem solving.
Problem solving	Apply engineering knowledge, skills and techniques to identify and define complex problems in a variety of contexts. Evaluate and use established engineering methods to identify potential solutions to independently and collaboratively resolve complex engineering problems and realise solutions. Demonstrate innovative and creative approaches and/or solutions in planning, designing or executing engineering projects.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Evaluate own knowledge and skills using frameworks of reflection and take responsibility for learning and performance. Work responsibly and safely in engineering environments to demonstrate professionalism.
Teamwork	Undertake various team roles, work effectively within a team, and utilise effective teamwork skills in order to achieve learning goals. Apply interpersonal skills to interact and collaborate to enhance outcomes through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship	Formulate sustainable engineering practices by integrating aspects of design, development or research through concern for economic, environmental, social and cultural perspectives and values. Engage with global traditions and current trends in engineering practice in order to appreciate diversity, seek equity in outcomes and adopt ethical and professional standards.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Electrical and Electronics Engineering (Honours), students must attain 32 credit points. Units (think of units as 'subjects') are equal to 1 or 2 credit points, sometimes abbreviated as cps. Most students choose to study units amounting to 4 credit points (or cps) per trimester, and usually undertake two trimesters each year.

The course comprises a total of 32 credit points, which must include the following:

- 31 credit points of core units and 1 elective unit (1 credit point)
- completion of SEJ010 Introduction to Safety and Project Oriented Learning (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0 credit point compulsory unit)
- Completion of SEP499 Professional Engineering Practice (12 weeks)
- Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SEJ010	Introduction to Safety and Project Oriented Learning (0 credit points)
SEJ101	Design Fundamentals (2 credit points)
SEB101	Engineering Physics
SIT199	Applied Algebra and Statistics

##### Trimester 2

SEJ102	Electrical Systems Engineering Project (2 credit points)
SIT194	Introduction to Mathematical Modelling
SIT172	Programming for Engineers

#### Level 2

##### Trimester 1

SEE210	Power Engineering Design (2 credit points)
SEP291	Engineering Modelling
SEE206	Measurement and Instrumentation

##### Trimester 2

STP010	Introduction to Work Placements (0 credit points)
SEE213	Distributed Generation System Design (2 credit points)^
SEE216	Analogue and Digital Systems
SER202	Programming for Embedded Systems

#### Level 3

##### Trimester 1

SEE332	Transmission and Distribution System Design (2 credit points)
SEE307	Systems and Signals
SEE312	Data Communication

##### Trimester 2

SEE333	Power System Protection Design and Safety (2 credit points)
SEE344	Control Systems
SEE308	Electrical Machines and Drives

##### Trimester 3

SEP499	Professional Engineering Practice *
--------	-------------------------------------

#### Level 4

##### Trimester 1

SEJ441	Engineering Project A (2 credit points)~
SEE407	SCADA and PLC

##### Elective

##### Trimester 2

SEJ446	Engineering Project B (2 credit points)~
SEE406	Power System Analysis

\* SEP499 Professional Engineering Practice is also available in trimester 1 and trimester 2.

~ Note: Students are expected to undertake SEJ441 and SEJ446 in consecutive trimesters. Students will be required to seek approval from the unit chair if they are unable to complete SEJ441 and SEJ446 consecutively.

^ Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

## Electives

Engineering recommended elective units:

SEE705	Energy Efficiency and Demand Management
SEE717	Smart Grid Systems
SEE718	Renewable Energy Systems
SEJ451	Materials Performance and Durability
SET404	Engineering Design: International Study Tour
SEV415	Infrastructure Engineering
SEN700	Research Methodology

## Work experience

Through SEP499 Professional Engineering Practice, you'll gain industry experience by completing at least 60 days (12 full-time weeks) of practical work experience in an engineering workplace, developing and enhancing your understanding of the engineering profession, possible career outcomes, and the opportunity to establish valuable professional networks.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

In your final year of the course, you may apply to undertake an international study tour to engage in a structured program of study, usually involving short project work overseas to gain discipline specific technical expertise and to enhance your global engineering awareness and experience.

## Research and research-related study

The key assessment of research and research skills in the programme is through the two linked 2 credit point units in the final year of the course. The first of these units is for students to develop a detailed research proposal and undertake preliminary proof-of-concept or testing of their experimental methods. The second unit is designed to undertake the proposed research and critically evaluate the outcomes of the project. The project is predominantly student-led with direction from an academic supervisor that has expertise in the research field.

# Bachelor of Mechanical Engineering (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Mechanical Engineering (Honours)
<i>Campus</i>	Waurm Ponds (Geelong) – For students who commenced prior to 2016
<i>Duration</i>	4 years full-time or part-time equivalent
<i>CRICOS course code</i>	079996J
<i>Deakin course code</i>	S462 (version 1)

*The final intake to this course version was in 2015. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Mechanical Engineering (Honours) places great emphasis on the practical application of engineering and scientific principles to produce industry-ready engineers, who are immediately employable and capable of adapting to an ever-changing future.

Product development and innovation are key drivers for Australian industry. To meet this need, Deakin's mechanical engineering degree brings together leading computer-aided engineering technologies and advanced materials to provide one of the most relevant mechanical engineering degrees in Australia. The automotive industry, in particular, has been involved in the design of the degree, and graduates can look forward to a high level of employment in this industry and supplier companies, as well as other leading manufacturing and design companies. The degree draws heavily on Deakin's world-class research teams in automotive engineering and advanced materials, with a practical problem solving approach that includes an opportunity to work on the Formula Society of Automotive Engineers (SAE) racing car, designed and built by our students. Along the way, you will develop project management, communication and financial management skills, as well as a solid understanding of product and process modelling and designing for sustainability.

You will learn generic skills, including entrepreneurship, innovation and leadership, project management, technical report writing and presentation, and comprehension and communication. You will also develop an understanding of the ethical basis of the engineering profession and practice, contemporary technical and professional issues in the practice of engineering, as well as how to address complex problems and produce innovative solutions beneficial to an organisation and society.

You will also gain a sound, fundamental understanding of the scientific principles underlying technology; learn the basic principles underlying the management of physical, human and financial resources; acquire the mathematical and computational skills necessary for solving theoretical and practical problems and for meeting future changes in technology; and gain an understanding of the social, cultural, global and environmental responsibilities of the professional engineer.

Units in the course may include assessment hurdle requirements.

## Professional recognition

Deakin's Bachelor of Mechanical Engineering (Honours) is accredited by Engineers Australia, which gives the degree international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Career opportunities

Graduates can expect to gain employment in the supplier companies, other leading manufacturing and design companies, aircraft, ship-building, aerospace and railroad.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud (online) enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud (online) enrolled students may be required to attend campus mode conducted activities during the corresponding intensive week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

*Note: Students enrolled in the off campus or Cloud (online) mode will be required to attend campus based activities at scheduled sessions during the trimester intensive week. Cloud (online) international students will be required to obtain a visitor visa to undertake these campus based activities. International students are unable to apply for a student visa for this course.*

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Engineering professional practice sequence

A series of professional practice units have been introduced as core requirements of the undergraduate Engineering courses. These four units (one at each year level) are intended to enable students to increase their awareness of various generic engineering, technological and professional practice skills, and how those skills are applied in the workplace. There will be an emphasis on group activities and assessment and a focus on the 'real' world.

## Work experience

Before students will be deemed eligible to graduate they must obtain an aggregate of at least 12 weeks of suitable practical experience during their program. Work experience would normally be gained during the vacation periods. Further details are contained in the unit description for SEP490 Engineering Work Experience.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

- 30 core units and 2 Engineering elective units
- completion of SEE010 Safety Induction Program or SEJ010 Introduction to Safety and Project Oriented Learning (0 credit-point compulsory units)
- a maximum of 10 credit points at Level 1
- a minimum 6 credit points at level 4
- a minimum 22 credit points combined over levels 2, 3 and 4
- completion of SEP490 – 12 Week Engineering Work Experience (0 credit points)
- Cloud (online) enrolled students may be required to attend campus mode conducted activities during the corresponding intensive week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Burwood (Melbourne) (first year of course only)*, Waurm Ponds (Geelong)
Cloud Campus	Yes
Duration	4 years full-time or part-time equivalent
CRICOS course code	079996J
Deakin course code	S462 (version 2)
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

\* Only the first year of this Engineering program is available at the Melbourne Burwood Campus. Students enrolled at the Melbourne Burwood Campus will be required to transfer to the Geelong Waurm Ponds Campus or Cloud (online) mode for the second year of their program.

*International students holding student visas – this course is registered for delivery to student visa holders at Geelong Waurm Ponds campus.*

## Course overview

Deakin's Bachelor of Mechanical Engineering (Honours) prepares you to be an industry-ready professional engineer capable of applying the principles of technology and science to the design, production and operation of systems, devices and machinery. Today, mechanical engineers lend their skills to the development of almost every design imaginable – especially complex products like cars, robots and aeroplanes.

Product development and advanced manufacturing are key drivers for the future of Australian industry. To meet this need, Deakin's mechanical engineering degree brings together leading computer-aided engineering technologies with advanced materials and manufacturing knowledge to provide one of the most relevant mechanical engineering degrees in Australia. Through project-oriented design-based learning (PODBL), students learn fundamental theory and apply it to industry-relevant projects to develop innovative solutions to real-world problems.

As a student you will benefit from Deakin's world-class research teams in automotive engineering and advanced materials, our strong links with industry and our state-of-the-art facilities.

During the course you'll cover core mechanical disciplines including machine design, thermo-fluids, structural design and industrial control while developing skills in project management, communication, and financial management. You will also gain a solid understanding of product and process modelling, and how to design for sustainability.

You'll also have opportunities to test your mechanical design and engineering skills in challenges such as the Shell Eco Marathon and Warman international and national competitions. Graduates have a high degree of employability in the automotive, manufacturing and mining sectors, as well as a range of other industries that utilise student's strong engineering design and product development skills.

Deakin's Bachelor of Mechanical Engineering (Honours) is accredited by Engineers Australia giving the degree international recognition and allowing graduates to practise as professional engineers in many countries around the world.

With an international skills shortage in the engineering industry, Deakin graduates are in demand. Graduates are highly employable, industry-ready and highly sought-after for their skills in engineering, innovation, leadership, project management and communication, as well as their capacity to astutely anticipate and adapt to the ever-changing nature of the mechanical engineering industry. Career opportunities exist in the automotive, aircraft, ship-building, aerospace, and railroad industries among others.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Deakin's Bachelor of Mechanical Engineering (Honours) is accredited by Engineers Australia, which gives the degree international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Career opportunities

Graduates can expect to gain employment in the supplier companies, other leading manufacturing and design companies, aircraft, ship-building, aerospace and railroad.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud Campus enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

International students: Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin's Cloud Campus. To participate in the mandatory campus based scheduled sessions during the trimester intensive week, it is suggested that you apply for a tourist visa to enter Australia. Please be advised that Deakin University cannot guarantee that you will be granted a tourist visa by the Australian Government.

International students studying through the Cloud Campus may not be granted a visitor visa to complete mandatory onsite components of the course.

Placement can occur at any time, including during the standard holiday breaks listed here:  
[deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Integrate well-developed knowledge of physical sciences and engineering fundamentals, which underpins the engineering discipline to analyse complex engineering problems and to evaluate possible solutions. Apply professional engineering knowledge, and knowledge of contextual factors in order to design, develop and maintain sustainable engineering infrastructure, systems or products. Plan and execute research projects to show capacity for advanced knowledge and skills in an engineering discipline and thereby demonstrate the ability to continue professional development and/or scholarship.
Communication	Apply effective communication skills in a professional context to interpret, evaluate and present technical engineering information using oral, written, visual modes. Demonstrate proficiency in comprehending viewpoints of others and present arguments and justifications for representing engineering position to technical and non-technical audience.
Digital literacy	Identify, select and use digital technologies and tools relevant to the engineering discipline to generate, manage and share information. Demonstrate the ability to independently and systematically locate information, evaluate its reliability, and use the information for engineering design, problem solving and research purposes.
Critical thinking	Demonstrate autonomy and judgement through balanced application of logic, intellectual and research criteria to review, analyse, and synthesise information for engineering problem solving.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Apply engineering knowledge, skills and techniques to identify and define complex problems in a variety of contexts. Evaluate and use established engineering methods to identify potential solutions to independently and collaboratively resolve complex engineering problems and realise solutions. Demonstrate innovative and creative approaches and/or solutions in planning, designing or executing engineering projects.
Self-management	Evaluate own knowledge and skills using frameworks of reflection and take responsibility for learning and performance. Work responsibly and safely in engineering environments to demonstrate professionalism.
Teamwork	Undertake various team roles, work effectively within a team, and utilise effective teamwork skills in order to achieve learning goals. Apply interpersonal skills to interact and collaborate to enhance outcomes through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship	Formulate sustainable engineering practices by integrating aspects of design, development or research through concern for economic, environmental, social and cultural perspectives and values. Engage with global traditions and current trends in engineering practice in order to appreciate diversity, seek equity in outcomes and adopt ethical and professional standards.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Mechanical Engineering (Honours), students must attain 32 credit points. Units (think of units as 'subjects') are equal to 1 or 2 credit points, sometimes abbreviated as cps. Most students choose to study units amounting to 4 credit points (or cps) per trimester, and usually undertake two trimesters each year.

The course comprises a total of 32 credit points, which must include the following:

- 31 credit points of core units and 1 elective unit (1 credit point)
- completion of SEJ010 Introduction to Safety and Project Oriented Learning (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- Completion of SEP499 Professional Engineering Practice (12 weeks)
- Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programs, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SEJ010	Introduction to Safety and Project Oriented Learning (0 credit points)
SEJ101	Design Fundamentals (2 credit points)
SEB101	Engineering Physics
SIT199	Applied Algebra and Statistics

##### Trimester 2

SEJ103	Materials Engineering Project (2 credit points)
SIT172	Programming for Engineers
SIT194	Introduction to Mathematical Modelling

#### Level 2

##### Trimester 1

SEM200	Machine Design (2 credit points)
SEM218	Fluid Mechanics
SEP291	Engineering Modelling

##### Trimester 2

STP010	Introduction to Work Placements (0 credit points)
SEJ201	Structural Design (2 credit points) <sup>^</sup>
SEM216	Stress and Failure Analysis
SEM202	Thermodynamics

#### Level 3

##### Trimester 1

SEM300	Thermo-Fluid System Design (2 credit points)
SED304	Product Development
SEM313	Manufacturing

##### Trimester 2

SEP499	Professional Engineering Practice *
--------	-------------------------------------

#### Level 4

##### Trimester 1

SEJ441	Engineering Project A (2 credit points) <sup>~</sup>
SEM400	Computational Fluid Dynamics

##### Elective

##### Trimester 2

SEJ446	Engineering Project B (2 credit points) <sup>~</sup>
SEM406	Advanced Modelling and Simulation

\* SEP499 Professional Engineering Practice is also available in trimester 1 and trimester 2.

<sup>~</sup> Note: Students are expected to undertake SEJ441 and SEJ446 in consecutive trimesters. Students will be required to seek approval from the unit chair if they are unable to complete SEJ441 and SEJ446 consecutively.

<sup>^</sup> Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

## Electives

Engineering recommended elective units:

SEE705	Energy Efficiency and Demand Management
SEJ451	Materials Performance and Durability
SET404	Engineering Design: International Study Tour ^
SEM711	Product Development Technologies
SEM722	Advanced Manufacturing Technology
SEM723	Additive Manufacturing Processes and Applications
SEM724	Design for Additive Manufacturing
SEM725	Materials for Additive Manufacturing
SEN700	Research Methodology

^ Not offered in 2019

## Work experience

Through SEP499 Professional Engineering Practice, you'll gain industry experience by completing at least 60 days (12 fulltime weeks) of practical work experience in an engineering workplace, developing and enhancing your understanding of the engineering profession, possible career outcomes, and the opportunity to establish valuable professional networks.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

In your final year of the course, you may apply to undertake an international study tour to engage in a structured program of study, usually involving short project work overseas to gain discipline specific technical expertise and to enhance your global engineering awareness and experience.

## Research and research-related study

The key assessment of research and research skills in the programme is through the two linked 2 credit point units in the final year of the course. The first of these units is for students to develop a detailed research proposal and undertake preliminary proof-of-concept or testing of their experimental methods. The second unit is designed to undertake the proposed research and critically evaluate the outcomes of the project. The project is predominantly student-led with direction from an academic supervisor that has expertise in the research field.

# Bachelor of Mechatronics Engineering (Honours)

Year	2019 course information
Award granted	Bachelor of Mechatronics Engineering (Honours)
Campus	Waurm Ponds (Geelong) – For students who commenced prior to 2016
Duration	4 years full-time or part-time equivalent
CRICOS course code	079999F
Deakin course code	S463 (version 1)

*The final intake to this course version was in 2015. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Bachelor of Mechatronics Engineering (Honours) places great emphasis on the practical application of engineering and scientific principles to produce industry-ready engineers, who are immediately employable and capable of adapting to an ever-changing future.

Mechatronics engineers are responsible for combining electronics, mechanical and robotics engineering principles to provide solutions to complex real-world problems such as the automation of industrial processes using robotics and other cutting-edge technologies. The Bachelor of Mechatronics Engineering (Honours) offers studies in electronics, mechanical design and autonomous systems, and values project-based learning. The course is tailored to industry needs and job readiness, and students have access to cutting-edge technology and facilities, including state-of-the-art mechatronic systems and industrial robots. Through final-year projects, you will gain and introduction to advanced research areas such as mobile robotics and 3D printing and have the opportunity to design an autonomous robot. There are also close links to strong research programs for those interested in pursuing post graduate studies.

You will learn generic skills, including entrepreneurship, innovation and leadership, project management, technical report writing and presentation, and comprehension and communication. You will also develop an understanding of the ethical basis of the engineering profession and practice, contemporary technical and professional issues in the practice of engineering, as well as how to address complex problems and produce innovative solutions beneficial to an organisation and society.

You will also gain a sound, fundamental understanding of the scientific principles underlying technology; learn the basic principles underlying the management of physical, human and financial resources; acquire the mathematical and computational skills necessary for solving theoretical and practical problems and for meeting future changes in technology; and gain an understanding of the social, cultural, global and environmental responsibilities of the professional engineer.

Units in the course may include assessment hurdle requirements.

## Professional recognition

Deakin's Bachelor of Mechatronics Engineering (Honours) course is accredited by Engineers Australia, which gives the degrees international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Career opportunities

Graduates can expect to gain employment in areas including factory control, automation and control system design, as electronic control systems engineers or robotics engineers.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud (online) enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud (online) enrolled students may be required to attend campus mode conducted activities during the corresponding intensive week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

*Note: Students enrolled in the off campus or Cloud (online) mode will be required to attend campus based activities at scheduled sessions during the trimester intensive week. Cloud (online) international students will be required to obtain a visitor visa to undertake these campus based activities. International students are unable to apply for a student visa for this course.*

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Engineering professional practice sequence

A series of professional practice units have been introduced as core requirements of the undergraduate Engineering courses. These four units (one at each year level) are intended to enable students to increase their awareness of various generic engineering, technological and professional practice skills, and how those skills are applied in the workplace. There will be an emphasis on group activities and assessment and a focus on the 'real' world.

## Work experience

Before students will be deemed eligible to graduate they must obtain an aggregate of at least 12 weeks of suitable practical experience during their program. Work experience would normally be gained during the vacation periods. Further details are contained in the unit description for SEP490 Engineering Work Experience.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

- 30 core units and 2 Engineering elective units
- completion of SEE010 Safety Induction Program or SEJ010 Introduction to Safety and Project Oriented Learning (0 credit-point compulsory units)
- a maximum of 10 credit points at Level 1
- a minimum 6 credit points at level 4
- a minimum 22 credit points combined over levels 2, 3 and 4
- completion of SEP490 – 12 Week Engineering Work Experience (0 credit points)
- Cloud (online) enrolled students may be required to attend campus mode conducted activities during the corresponding intensive week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

# Bachelor of Mechatronics Engineering (Honours)

Year	2019 course information
Award granted	Bachelor of Mechatronics Engineering (Honours)
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Burwood (Melbourne) (first year of course only)*, Waurm Ponds (Geelong)
Cloud Campus	Yes
Duration	4 years full-time or part-time equivalent
CRICOS course code	079999F
Deakin course code	S463 (version 2)
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

\* Only the first year of this Engineering program is available at the Melbourne Burwood Campus. Students enrolled at the Melbourne Burwood Campus will be required to transfer to the Geelong Waurm Ponds Campus or Cloud (online) mode for the second year of their program.

*International students holding student visas – this course is registered for delivery to student visa holders at Geelong Waurm Ponds campus.*

## Course overview

Deakin's Bachelor of Mechatronics Engineering (Honours) prepares you to be an industry-ready professional engineer with the skills to apply mechatronics engineering principles to challenging real-world problems such as the automation of industrial processes using robotics and other cutting-edge technologies, flying drones, 3D printers, robotics and self-driving cars.

The course offers studies in electronics, mechanical design and autonomous systems. Through project-oriented design-based learning (PODBL), you'll learn fundamental theory and apply it to industry-relevant projects to develop innovative solutions to real-world problems.

The course is tailored to industry needs and job readiness, and gives you access to cutting-edge technology and facilities, including state-of-the-art mechatronic systems and industrial robots. Through final-year projects, you will gain an introduction to advanced research areas such as mobile robotics and 3D printing, and have the opportunity to design an autonomous robot.

The course will also provide you with transferrable skills in entrepreneurship, innovation, project management, technical report writing and more. You'll develop an understanding of ethics within the engineering profession, and of technical and professional issues within the industry while gaining an insight into the social, cultural, global and environmental responsibilities of the modern engineer.

Deakin's Bachelor of Mechatronics Engineering (Honours) course is accredited by Engineers Australia, giving the degree international recognition and allowing graduates to practise as professional engineers in many countries around the world. With an international skills shortage in the engineering industry, Deakin graduates are in demand.

Career opportunities exist in areas including industrial automation, control system design, electronic control systems engineering, robotics engineering and more.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

Deakin's Bachelor of Mechatronics Engineering (Honours) course is accredited by Engineers Australia, which gives the degrees international recognition, allowing graduates to practise as professional engineers in many countries around the world.

## Career opportunities

Graduates can expect to gain employment in areas including factory control, automation and control system design, as electronic control systems engineers or robotics engineers.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud Campus enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

International students: Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin's Cloud Campus. To participate in the mandatory campus based scheduled sessions during the trimester intensive week, it is suggested that you apply for a tourist visa to enter Australia. Please be advised that Deakin University cannot guarantee that you will be granted a tourist visa by the Australian Government.

International students studying through the Cloud Campus may not be granted a visitor visa to complete mandatory onsite components of the course.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](https://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate TAFE qualifications or other approved post-secondary studies may apply for Recognition of Prior Learning. Credit may be considered for skills obtained in the workforce or by informal means.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Integrate well-developed knowledge of physical sciences and engineering fundamentals, which underpins the engineering discipline to analyse complex engineering problems and to evaluate possible solutions. Apply professional engineering knowledge, and knowledge of contextual factors in order to design, develop and maintain sustainable engineering infrastructure, systems or products. Plan and execute research projects to show capacity for advanced knowledge and skills in an engineering discipline and thereby demonstrate the ability to continue professional development and/or scholarship.
Communication	Apply effective communication skills in a professional context to interpret, evaluate and present technical engineering information using oral, written, visual modes. Demonstrate proficiency in comprehending viewpoints of others and present arguments and justifications for representing engineering position to technical and non-technical audience.
Digital literacy	Identify, select and use digital technologies and tools relevant to the engineering discipline to generate, manage and share information. Demonstrate the ability to independently and systematically locate information, evaluate its reliability, and use the information for engineering design, problem solving and research purposes.
Critical thinking	Demonstrate autonomy and judgement through balanced application of logic, intellectual and research criteria to review, analyse, and synthesise information for engineering problem solving.
Problem solving	Apply engineering knowledge, skills and techniques to identify and define complex problems in a variety of contexts. Evaluate and use established engineering methods to identify potential solutions to independently and collaboratively resolve complex engineering problems and realise solutions. Demonstrate innovative and creative approaches and/or solutions in planning, designing or executing engineering projects.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Evaluate own knowledge and skills using frameworks of reflection and take responsibility for learning and performance. Work responsibly and safely in engineering environments to demonstrate professionalism.
Teamwork	Undertake various team roles, work effectively within a team, and utilise effective teamwork skills in order to achieve learning goals. Apply interpersonal skills to interact and collaborate to enhance outcomes through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship	Formulate sustainable engineering practices by integrating aspects of design, development or research through concern for economic, environmental, social and cultural perspectives and values. Engage with global traditions and current trends in engineering practice in order to appreciate diversity, seek equity in outcomes and adopt ethical and professional standards.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Mechatronics Engineering (Honours), students must attain 32 credit points. Units (think of units as 'subjects') are equal to 1 or 2 credit points, sometimes abbreviated as cps. Most students choose to study units amounting to 4 credit points (or cps) per trimester, and usually undertake two trimesters each year.

The course comprises a total of 32 credit points which must include the following:

- 30 credit points of core units and 2 elective units (1 credit point each)
- completion of SEJ010 Introduction to Safety and Project Oriented Learning (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- Completion of SEP499 Professional Engineering Practice (12 weeks)
- Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programs, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SEJ010	Introduction to Safety and Project Oriented Learning (0 credit points)
SEJ101	Design Fundamentals (2 credit points)
SEB101	Engineering Physics
SIT199	Applied Algebra and Statistics

##### Trimester 2

SEJ102	Electrical Systems Engineering Project (2 credit points)
SIT172	Programming for Engineers
SIT194	Introduction to Mathematical Modelling

#### Level 2

##### Trimester 1

SEM200	Machine Design (2 credit points)
SEP291	Engineering Modelling
SEE206	Measurement and Instrumentation

##### Trimester 2

STP010	Introduction to Work Placements (0 credit points)
SER201	Embedded System Design (2 credit points) <sup>^</sup>
SEE216	Analogue and Digital Systems
SER202	Programming for Embedded Systems

#### Level 3

##### Trimester 1

SER300	Mechatronic Design (2 credit points)
SEE312	Data Communication
SEE326	Artificial Intelligence for Autonomous Systems

##### Trimester 2

SER301	Electromechanical Systems Design (2 credit points)
SEE344	Control Systems
SEM327	Dynamics of Machines

##### Trimester 3

SEP499	Professional Engineering Practice *
--------	-------------------------------------

#### Level 4

##### Trimester 1

SEJ441	Engineering Project A (2 credit points)~
--------	--

2 elective units

##### Trimester 2

SEJ446	Engineering Project B (2 credit points)~
SER400	Virtual and Augmented Interfaces

\* SEP499 Professional Engineering Practice is also available in trimester 1 and trimester 2.

~ Note: Students are expected to undertake SEJ441 and SEJ446 in consecutive trimesters. Students will be required to seek approval from the unit chair if they are unable to complete SEJ441 and SEJ446 consecutively.

<sup>^</sup> Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)

## Electives

Engineering recommended elective units:

SEE407	SCADA and PLC
SED304	Product Development
SEJ451	Materials Performance and Durability
SEE705	Energy Efficiency and Demand Management
SEE711	Sensor Networks
SEV415	Infrastructure Engineering
SET404	Engineering Design: International Study Tour ^
SEN700	Research Methodology

^ Not offered in 2019

## Work experience

Through SEP499 Professional Engineering Practice, you'll gain industry experience by completing at least 60 days (12 weeks fulltime) of practical work experience in an engineering workplace, developing and enhancing your understanding of the engineering profession, possible career outcomes, and the opportunity to establish valuable professional networks.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

In your final year of the course, you may apply to undertake an international study tour to engage in a structured program of study, usually involving short project work overseas to gain discipline specific technical expertise and to enhance your global engineering awareness and experience.

## Research and research-related study

The key assessment of research and research skills in the programme is through the two linked 2 credit point units in the final year of the course. The first of these units is for students to develop a detailed research proposal and undertake preliminary proof-of-concept or testing of their experimental methods. The second unit is designed to undertake the proposed research and critically evaluate the outcomes of the project. The project is predominantly student-led with direction from an academic supervisor that has expertise in the research field.

# Bachelor of Software Engineering (Honours)

<i>Deakin course code</i>	S464
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Deakin's Bachelor of Software Engineering (Honours) is an innovative course focusing on software engineering, cyber-physical systems and robotics applications, producing sought-after graduates who will create the technologies of the future.

The rapid advancement of sensing and computing hardware supporting smart, connected devices is driving growing demand for software engineers who can move beyond traditional technologies such as web and database systems.

As a software engineer you will operate at the junction of software development and systems engineering, applying your specialised robotics and cyber-physical computing skills alongside hardware designers and application developers. You will drive the design and development of computing solutions that operate within and interact with people, environments, and other technologies.

During the course you will extend your skills beyond web and database technologies and desktop software patterns to acquire niche skills in robotics and cyber-physical computing in preparation for careers as innovative software engineers capable of developing the cyber-physical systems of the future.

As a graduate you will be well-equipped to find work developing and implementing state-of-the-art smart systems or frameworks into various existing industries such as health, fitness and travel.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The School of Information Technology is in the process of seeking provisional accreditation with Engineers Australia.

## Career opportunities

You may pursue a career as a software engineer, software developer, programmer, embedded systems developer, robotics programmer or systems architect. Software engineers also work in specialist research roles; with experience, your career can move into project management and business development, in roles such as CIO and CTO, from start-ups to multinational corporations.

## Participation requirements

In order to satisfy course accreditation requirements, as specified and administered by Engineers Australia, all Cloud Campus enrolled students are required to participate in Campus learning activities equivalent to a minimum duration of one full academic week for every trimester of effective full time study in order to ensure that graduates possess and have demonstrated the minimum necessary knowledge and skill base, engineering application abilities, and professional skills, values and attitudes at successful completion of the course to be sufficiently prepared to enter professional engineering practice.

Cloud Campus enrolled students are required to attend campus mode conducted activities during the corresponding Intensive Week in a trimester. Attendance at campus mode activities is linked to assessment requirements within the Engineering programmes, failure to attend will result in not meeting the hurdle requirement of the respective assessment. Thus, a fail grade shall be awarded for the respective affected unit(s) for that particular trimester.

International students: Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin's Cloud Campus. To participate in the mandatory campus based scheduled sessions during the trimester intensive week, it is suggested that you apply for a tourist visa to enter Australia. Please be advised that Deakin University cannot guarantee that you will be granted a tourist visa by the Australian Government.

International students studying through the Cloud Campus may not be granted a visitor visa to complete mandatory onsite components of the course.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Course expenses

### Student equipment purchases

The learning experiences and assessment activities within this course require that students have access to a range of technologies beyond a desktop computer or laptop. Access to high cost specialist equipment, such as robots, is provided. Students will be required to purchase minor equipment, such as small single board computers, microcontrollers and sensors, which will be used within a range of units in this course. This equipment is also usable by the student beyond their studies. Equipment requirements and details of suppliers will be provided on a per-unit basis. The indicative cost of this equipment for this course is AUD\$500.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a broad, coherent knowledge of the software engineering discipline, with detailed knowledge of the application of software engineering principles and approaches. Use knowledge, skills, tools and methodologies for professional software engineering practice. Design software components, systems and computing processes to meet application requirements, within realistic economic, environmental, social, political, legal and ethical constraints.
Communication	Communicate in a professional context to inform, motivate and effect change, and to drive sustainable innovation, utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Utilise a range of digital technologies and information sources to discover, analyse, evaluate, select, process and disseminate both technical and non-technical information.
Critical thinking	Evaluate information and evidence, applying critical and analytical thinking and reasoning, technical skills, personal judgement and values, in decision processes.
Problem solving	Apply theoretical constructs and skills and critical analysis to real-world and ill-defined problems and develop innovative computing solutions.
Self-management	Apply knowledge and skills to new situations in professional practice and/or further learning in the field of software engineering with adaptability, autonomy, responsibility and personal accountability for actions as a practitioner and a learner. Apply understanding of reflective practice and self-critique skills within broad parameters to plan for their own future continuing professional development.
Teamwork	Contribute effectively as a skilled and knowledgeable individual to the processes and output of a work unit or team. Work collaboratively in multi-disciplinary teams, employing effective communication, self- and team-management skills to achieve shared goals.
Global citizenship	Apply professional and ethical standards and accountability for own learning to in the development, design, construction and management of localised computing solutions.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Software Engineering (Honours), students must attain 32 credit points. Most units (think of units as 'subjects') are equal to 1 or 2 credit point. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The 32 credit points include 22 core units (these are compulsory) and 4 elective units (you can choose which ones to study).

The course comprises a total of 32 credit points, which must include the following:

- 22 core units (28 credit points which includes a compulsory internship unit)
- 4 elective units
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- completion of SIT010 Safety Induction Program (0-credit-point compulsory unit)
- completion of SEJ010 Introduction to Safety and Project Oriented Learning (0-credit-point compulsory unit)
- completion of STP010 Introduction to Work Placements (0-credit-point compulsory unit)
- A maximum of 10 credit points at Level 1
- A minimum of 22 credit points combined over levels 2, 3 and 4
- A minimum of 6 credit points at level 4

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SIT010	Safety Induction Program (0 credit point unit)
SEJ010	Introduction to Safety and Project Oriented Learning (0 credit point unit)
SEJ101	Design Fundamentals (2 credit points)
SEB101	Engineering Physics
SIT122	Robotics Studio

##### Trimester 2

SIT107	Software Engineering 1: Connecting the Cyber and Physical Worlds (2 credit points)
SIT102	Introduction to Programming
SIT103	Data and Information Management

#### Year 2

##### Trimester 1

STP010	Introduction to Work Placements (0 credit point unit)
SIT232	Object-Oriented Development
SIT210	Embedded Systems Development
SIT192	Discrete Mathematics
SIT199	Applied Algebra and Statistics

##### Trimester 2

SIT209	Software Engineering 2: Developing Internet-Of-Things Applications (2 credit points)
SIT202	Networks and Communications
SIT221	Data Structures and Algorithms

#### Year 3

##### Trimester 1

SIT315	Programming Paradigms
SIT310	Robotics Application Development

Plus two elective units

##### Trimester 2

SIT311	Software Engineering 3: Designing User-Centric Internet-Of-Things Application (2 credit points)
SIT314	Developing Scalable Internet-Of-Things Applications
SIT307	Data Mining and Machine Learning ~*

## Year 4

### Trimester 1

- SIT430 Honours Research Project A ^ (2 credit point unit)  
SIT432 Developing Secure Internet-Of-Things Applications ^

Plus one elective unit

### Trimester 2

- SIT431 Honours Research Project B ^ (2 credit point unit)  
SIT433 Unit description is currently unavailable ^

Plus one elective unit

^ Offered from 2020

\* Offered in Trimester 1 from 2020

~ Students who commenced prior to 2020 may choose to replace SIT307 with an elective unit.

## Electives

Recommended elective units:

- SIT708 Mobile Systems Development  
SIT718 Real World Analytics  
SIT741 Statistical Data Analysis  
SIT742 Modern Data Science  
SIT755 Interaction and Design for Virtual Reality and Augmented Reality  
SIT756 Development for Virtual Reality  
SIT703 Advanced Digital Forensics  
SIT707 Software Quality and Testing  
SIT717 Enterprise Business Intelligence  
SIT720 Machine Learning  
SIT743 Multivariate and Categorical Data Analysis  
SIT744 Practical Machine Learning for Data Science

## Work experience

The course includes a compulsory work placement that requires you to undertake at least 480 hours of suitable practical experience.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You may apply to undertake a study tour to explore and engage in a structured program of study overseas to gain discipline expertise as well as be challenged to develop your personal qualities and global understanding.

## Research and research-related study

The key assessment of research and research skills in the programme is through the two linked 2 credit point units in the final year of the course. The first of these units is for students to develop a detailed research proposal and undertake preliminary proof-of-concept or testing of their experimental methods. The second unit is designed to undertake the proposed research and critically evaluate the outcomes of the project. The project is predominantly student-led with direction from an academic supervisor that has expertise in the research field.

<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Deakin's Bachelor of Environmental Engineering (Honours) emphasises the practical application of engineering and scientific principles to produce industry-ready environmental engineers who are immediately employable and capable of adapting to an ever-changing future.

You will gain a breadth of knowledge across the environmental engineering discipline and the technical skills to develop sustainable engineering solutions to the challenges they face in this field.

In particular, you will learn the fundamentals of environmental engineering and the natural and physical sciences involved in the discipline including geography, chemistry, mathematics, environmental science and analysis, marine ecosystems, fluid mechanics, hydrology and hydraulics, waste management, environmental infrastructure, protection, planning and more.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates will be in high demand for employment with engineering firms, land developers, government agencies, consulting firms, and well prepared for careers that address global issues such as climate change, environmental sustainability, waste disposal, recycling, public health, air and water pollution.

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Design, develop, manage and evaluate the sustainability of established and innovative engineering solutions for real-world environmental problems by integrating and applying well-developed knowledge and skills in natural and physical sciences, engineering and project management, and by assessing environmental, social and economic consequences of implementation. Apply professional engineering and scientific techniques to environmental engineering problems, evaluate the benefits, risks and uncertainty associated with the use of specific environmental engineering approaches and tools, and evaluate the effectiveness of designs and experiments that are used to determine solutions. Plan and execute practice-based research projects to show capacity for advanced knowledge and skills in the discipline of environmental engineering and thereby demonstrate the ability to continue professional development and scholarship.
Communication	Apply effective communication skills in a professional context to interpret, evaluate and present technical engineering information using oral, written, visual modes. Demonstrate proficiency and accuracy in comprehending diverse viewpoints from technical and non-technical stakeholders and present arguments and justifications for representing an engineering position.
Digital literacy	Identify, select and use digital technologies and tools relevant to environmental engineering to use, manage, generate and share information, evaluate its reliability, and use the information for engineering design, problem solving and research purposes. Demonstrate the ability to independently and systematically locate and share information, laws, policies and regulations that pertain to the air, water and terrestrial environment, their management and impacts on human health.
Critical thinking	Demonstrate autonomy and judgement through balanced application of logic, intellectual and research criteria to review, analyse, and synthesise information for engineering problem solving.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Apply knowledge of natural and physical sciences, and environmental engineering skills and techniques to identify and define complex problems in a variety of contexts. Evaluate and use established engineering methods to identify potential solutions to independently and collaboratively resolve complex, real-world environmental engineering problems and realise solutions. Demonstrate innovative and creative approaches and solutions to environmental engineering problems that are constrained by local, national, global and contemporary issues and show capacity for planning, designing, executing and managing environmental engineering projects.
Self-management.	Evaluate own knowledge and skills, professionalism and ethical development using frameworks of reflection and take responsibility for learning and performance. Work responsibly and safely in engineering environments to demonstrate ethical conduct and professionalism.
Teamwork	Undertake various team roles, work effectively in multidisciplinary teams, and utilise effective teamwork skills in order to achieve team objectives. Apply interpersonal skills to interact and collaborate to enhance outcomes through shared knowledge and creative capacity to optimise engineering outcomes.
Global citizenship	Formulate sustainable engineering practices by integrating aspects of design, development, management and research competencies through concern for and appreciation of economic, environmental, social and cultural perspectives, including those of indigenous peoples. Engage with global traditions and current trends in environmental engineering practice in order to appreciate diversity, seek equity in outcomes and adopt ethical and professional standards.

SEV301	Water Engineering Design (2 credit points)
SEV311	Air and Noise Pollution and Control ^
SEV322	Hydrology and Hydraulics

##### Trimester 2

SEV331	Waste Management Systems (2 credit points)*
SLE319	Environmental Protection and Planning
SLE342	Risks to Healthy Environments

##### Trimester 3

SEP499	Professional Engineering Practice ~
--------	-------------------------------------

#### Level 4

##### Trimester 1

SEJ441	Engineering Project A (2 credit points)
SEV401	Integrated Catchment Systems ^

##### Elective

##### Trimester 2

SEJ446	Engineering Project B (2 credit points)
SEV415	Infrastructure Engineering

- # Must have successfully completed STP010 Introduction to Work Placements (0 credit point unit)
- ~ SEP499 Professional Engineering Practice is also available in trimester 1 and trimester 2.
- \* Available from 2020
- ^ Available from 2021

## Electives

Select one elective unit.

## Work experience

Through SEP499 Professional Engineering Practice, you'll gain industry experience by completing at least 60 days of practical work experience in an engineering workplace, developing and enhancing your understanding of the environmental engineering profession, possible career outcomes, and the opportunity to establish valuable professional networks.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You may apply to undertake a study tour to explore and engage in a structured program of study overseas to gain discipline expertise as well as be challenged to develop your personal qualities and global understanding.

## Research and research-related study

The key assessment of research and research skills in the programme is through the two linked 2 credit point units in the final year of the course. The first of these units is for students to develop a detailed research proposal and undertake preliminary proof-of-concept or testing of their experimental methods. The second unit is designed to undertake the proposed research and critically evaluate the outcomes of the project. The project is predominantly student-led with direction from an academic supervisor that has expertise in the research field.

## Bachelor of Information Technology (Honours)

<i>Award granted</i>	Bachelor of Information Technology (Honours)
<i>CRICOS course code</i>	063354G
<i>Deakin course code</i>	S470 (version 2)

*Offered to continuing students only. Students commencing in 2019, please refer to the new version of S470. Continuing students should discuss unit selections with their enrolment officer and refer to the 2018 Handbook.*

# Bachelor of Information Technology (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Information Technology (Honours)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne), Waurin Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	063354G
<i>Deakin course code</i>	S470 (version 3)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Deakin's Bachelor of Information Technology Honours program aims to provide you with a deep understanding of the discipline of Information Technology through focused research project in your area of interest. Throughout the program you'll acquire valuable skills for life-long learning; an essential professional attribute in this ever-evolving field.

The coursework component of the honours program provides you with advanced theoretical knowledge underpinning robust research or project development, while the research project provides you with opportunities to conduct a research project and document this in a thesis, or to focus on practical application of research through a project development. The research component develops the practical skills necessary to investigate an area of interest through research exploration or project development.

An honours degree will give you a competitive edge in the job market and creates a pathway to further Higher Degrees by Research (HDR) study or IT industry. For more information on career outcomes for this course, please refer to the Bachelor of Information Technology.

Entry into the Bachelor of Information Technology (Honours) program requires that students have completed a Bachelor of Information Technology (or equivalent) and hold an overall level of academic performance of 65% or greater in their level 3 units. An alternative entry pathway to the Honours Program for consideration is the evidence of relevant work experience assessed through an interview process.

## Career opportunities

The Bachelor of Information Technology (Honours) will produce high quality graduates with the generic skills, theoretical knowledge, and specialised practical skills to either gain employment or to succeed in further study such as Higher Degrees by Research.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of theoretical and technical knowledge in one or more information technology areas through coursework and research that uses appropriate principles and methods.
Communication	<p>Apply critical thinking and ethical research to identify problems, design, provide and evaluate solutions using established theories, models and constructs in a body of knowledge or practice.</p> <p>Communicate effectively the design and outcomes of research or project development within a team of experts in the field using a range of verbal, graphical and written forms customised for diverse audiences.</p>
Digital literacy	Demonstrate an advanced and integrated understanding of theoretical and technical knowledge in one or more information technology areas through coursework and research that uses appropriate principles and methods.
Critical thinking	<p>Apply critical thinking and ethical research to identify problems, design, provide and evaluate solutions using established theories, models and constructs in a body of knowledge or practice.</p> <p>Communicate effectively the design and outcomes of research or project development within a team of experts in the field using a range of verbal, graphical and written forms customised for diverse audiences.</p>
Problem solving	<p>Apply critical thinking and ethical research to identify problems, design, provide and evaluate solutions using established theories, models and constructs in a body of knowledge or practice.</p> <p>Communicate effectively the design and outcomes of research or project development within a team of experts in the field using a range of verbal, graphical and written forms customised for diverse audiences.</p>
Self-management	Demonstrate autonomy, well-developed judgement, adaptability and responsibility as a practitioner or learner.
Teamwork	<p>Apply critical thinking and ethical research to identify problems, design, provide and evaluate solutions using established theories, models and constructs in a body of knowledge or practice.</p> <p>Communicate effectively the design and outcomes of research or project development within a team of experts in the field using a range of verbal, graphical and written forms customised for diverse audiences.</p>
Global citizenship	Demonstrate autonomy, well-developed judgement, adaptability and responsibility as a practitioner or learner.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Information Technology (Honours), students must attain 8 credit points.

The 8 credit points will include the following:

- 4 core units (totalling 6 credit points)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- 2 level 7 SIT elective units (totalling 2 credit points selected from a range of level 7 SIT elective units listed below)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SIT420	Research Methods and Practices in Information Technology
SIT424	Advanced Topics in Information Technology
SIT430	Honours Research Project A (2 credit points)
SIT431	Honours Research Project B (2 credit points)

### Electives

Students are to select two appropriate advanced elective coursework units from a list of the Master of Information Technology units below:

SIT701	Enterprise Network Construction
SIT708	Mobile Systems Development
SIT718	Real World Analytics
SIT737	Service Oriented Architectures and Technologies
SIT741	Statistical Data Analysis
SIT742	Modern Data Science
SIT755	Interaction and Design for Virtual Reality and Augmented Reality
SIT756	Development for Virtual Reality
SIT780	Enterprise Applications Development
SIT702	Enterprise Network Management
SIT703	Advanced Digital Forensics
SIT707	Software Quality and Testing
SIT717	Enterprise Business Intelligence
SIT720	Machine Learning
SIT725	Software Engineering
SIT735	Communications Network Security
SIT743	Multivariate and Categorical Data Analysis
SIT744	Practical Machine Learning for Data Science
SIT757	Content Creation for Virtual Reality
SIT758	Virtual Reality On Mobile Platforms
SIT794	Services Management

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Projects and supervision – additional information

As part of your application for this course, you will be required to first contact potential supervisors and discuss projects. Once you have met with a supervisor and agreed on a project, you will need to complete an application form and submit this via the Deakin applicant portal. Visit Deakin's website for more information.

See potential projects and supervisors for Honours.

## Research and research-related study

The research project provides the practical skills necessary to deliver a strong foundation in research. Thesis preparation will include an introduction to research methodologies appropriate to the discipline including associated methods, processes and practice. You will work with a member of staff who is experienced in research and who can assist you to gain insight into research and independent investigation. Staff use their research experience and industry skills to ensure that the research projects and course delivery methods are current.

# Bachelor of Environmental Science (Honours)

<i>Year</i>	2019 course information
<i>Award granted</i>	Bachelor of Environmental Science (Honours)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne), Waurin Ponds (Geelong), Warrnambool
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	047023E
<i>Deakin course code</i>	S494
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Deakin's Bachelor of Environmental Science (Honours) provides you with exposure to a range of possible career paths and an understanding of your chosen discipline through research in areas including environmental management and sustainability; ecological risk assessment; wildlife and conservation biology; behaviour, ecology, evolution, and, ecophysiology; marine and freshwater biology; and fisheries and aquaculture.

You will be exposed to research of national and international significance and acquire skills in research design and implementation, critical thinking and data analysis, digital literacy and scientific communication. You will also develop valuable skills for life-long learning; an essential professional attribute in this ever-evolving field.

The coursework component of the honours program provides you with essential knowledge in areas that underpin research – experimental design, quantitative analysis and science professionalism. The research project component enable you to develop the research skills necessary to investigate an area of interest.

You will have the support and supervision of our experienced staff throughout your honours program and will graduate with skills that provide you with a competitive edge in the job market and an ideal pathway to further study and research training (including Masters and PhD programs).

## Career opportunities

The Bachelor of Environmental Science (Honours) will produce high quality graduates with the generic skills, theoretical knowledge, and specialised research skills to gain employment in government and in the private sector.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Graduates will have advanced theoretical and technical knowledge in environmental science.
Communication	Communicate effectively the design and outcomes of research using a range of verbal, graphical and written forms customised for diverse audiences.
Digital literacy	Utilise a range of digital technologies and information sources to discover, select, analyse, employ, evaluate, critique, and disseminate outcomes from the research project.
Critical thinking	Use critical and analytical thinking to identify problems and the design of solutions using established theories, models, constructs and practice.
Problem solving	Apply theoretical constructs, advanced skills and critical analysis to demonstrate well developed judgement adaptability and evaluation of solutions to research problems.
Self-management	Develop and apply knowledge and skills in creative ways to demonstrate advanced levels of autonomy, initiative and ethical and professional behaviour in research.
Teamwork	Work independently and/or collaboratively within a research team, receiving advice and guidance from supervisor/s that contributes to achieving the outcomes of the Honours project.
Global citizenship	Apply scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with stakeholders to articulate the place and importance of scientific inquiry in the local and global context.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Bachelor of Environmental Science (Honours), students must attain 8 credit points.

The 8 credit points include:

- 6 core units within your chosen specialisation
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SLE440	Honours Environmental Science Research 1A
SLE441	Honours Environmental Science Research 1B
SLE442	Honours Environmental Science Research 2 (2 credit points)
SLE443	Honours Environmental Science Research 3 (2 credit points)
SLE451	Science Professionalism
SLE452	Research Design and Data Analysis

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Projects and supervision – additional information

As part of your application for this course, you will be required to first contact potential supervisors and discuss projects. Once you have met with a supervisor and agreed on a project, you will need to complete an application form and submit this via the Deakin applicant portal. Visit Deakin's website for more information.

See potential projects and supervisors for Honours at Burwood (Melbourne), Waurin Ponds (Geelong) or Warrnambool.

## Research and research-related study

The research project provides the practical skills necessary to deliver a strong foundation in research. Thesis preparation will include an introduction to research methodologies appropriate to the discipline including associated methods, processes and practice. You will work with a member of staff who is experienced in research and who can assist you to gain insight into research and independent investigation. # Graduate Certificate of Landscape Design

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Landscape Design
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>Deakin course code</i>	S503
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Certificate of Landscape Design can only be completed as an exit option from the Master of Landscape Architecture. The course is made up of 4 credit points of study that will help you to develop a solid appreciation of landscape architecture design, practice, thinking and equip you with the essential skills to engage in this discipline.

Units in the course may include assessment hurdle requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline- specific knowledge and capabilities	Develop specialised conceptual landscape design knowledge and capabilities with adaptability and fluency in designing, developing and improving sustainable environments and communities. Apply knowledge of history and practice to design, develop and manage landscape design projects.
Communication	Communicate with generalist audiences in a variety of contexts using oral, written, digital, graphic and interpersonal communication modes to ideate and motivate public and private landscape design decisions and to effect change.
Digital literacy	Apply knowledge of several technical tools and methodologies to locate, collect, analyse, interpret and synthesise complex information in landscape design.
Critical thinking	Review problems, scenarios, designs and plans and address landscape design problems at different scales and complexities.
Problem solving	Apply landscape design knowledge to identify environmental, cultural and social problems, devise ways to investigate and resolve opportunities and constraints, drawing evidence, and producing solutions as the basis for appropriate action.
Self-management	Maintain good ethical standards and standards by working individually and collaboratively to produce designs and plans in a timely manner. Apply knowledge and skills to solve contemporary landscape design problems.

Approved by Faculty Board 7 June 2018

## Course rules

To qualify for the proposed Graduate Certificate of Landscape Design (exit option only), students must successfully complete 4 credit points from the units listed below:

- 2 core units
- 2 course elective units

## Course structure

### Core units

Students must complete at least 2 of the following units:

#### Trimester 1

STP050	Academic Integrity (0 credit points)
SRL731	Landscape Narrating and Meaning
SRD760	Geo-Planning and Design

#### Trimester 2

SRL732	Plants, Design and Ecologies
SRL733	Indigenous Narratives and Processes

Plus 2 elective units chosen from S703 Master of Landscape Architecture course elective units

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Sustainable Regional Development

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Sustainable Regional Development
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	One year part-time
<i>Deakin course code</i>	S504
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*International students – Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin’s Cloud Campus.*

## Course overview

The Graduate Certificate of Sustainable Regional Development will suit students who are analytical, inquisitive, solution or policy-oriented and interested in seeking employment in areas associated with sustainable regional and rural development, strategic urban and regional planning, natural resources management, and climate change adaptation planning.

Sustainable regional development is critical to the economic performance of both developed and developing countries. Two thirds of Australia’s export earnings come from regional industries such as agriculture, tourism, retail, services and manufacturing.

As such, demand has risen sharply for professionals with the ability to undertake regional socioeconomic and environmental planning that looks to the long-term competitive advantages of regional areas, and propose appropriate policy responses.

As a graduate of this course, you’ll be well prepared to take advantage of these opportunities.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

This course will prepare students for a career in planning (strategic, economic, rural, environmental, statutory), management (including environmental management), policy development, socio-economic and demographic analysis among others. Potential employers include: government (national, state and local) departments and agencies with a focus on regional areas, economic development, agriculture, the environment or policy development; planning, economic and environmental firms; statutory authorities such as catchment management authorities; and any organisation seeking graduates with formal training in strategic thinking and planning.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Further study

S604 Graduate Diploma of Sustainable Regional Development

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate mastery and specialist knowledge through the application of scientific research principles and methodologies in the investigation of recent developments within a chosen field of study. Plan and execute a substantial research project to demonstrate a deep understanding and mastery within that scientific field.
Communication	Present a reasoned argument that highlights essential details of scientific procedures, key observations, results and conclusions of scientific research in a professional manner using appropriate style, language and references including local, national, and international contributions or contexts.
Digital literacy	Use well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise and disseminate scientific literature in the planning and implementation of research projects.
Critical thinking	Appraise complex scientific methodologies and information using critical, analytical and logical reasoning from multiple perspectives for evaluating the merits of scientific methodologies, theoretical propositions and practice.
Problem solving	Demonstrate complex problem solving skills by identifying and creating solutions to real world ill-defined problems through scientific inquiry.
Self-management	Work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.

Deakin graduate learning outcomes	Course learning outcomes
Teamwork	Work independently and collaboratively with advice from the supervisor towards achieving the outcomes of a research project and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in diverse professional, social and cultural contexts.
Global citizenship	Demonstrate scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability to articulate the place and importance of scientific inquiry in the local and global context.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Graduate Certificate of Sustainable Regional Development, students must attain 4 credit points (1 year – part time), which must include the following:

- four (4) core units
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

- STP050 Academic Integrity (0 credit points)  
 SLE740 Climate Change Adaptation and Mitigation  
 SLE742 Systems and Strategic Thinking

##### Trimester 2

- SLE741 Regional Development Economics and Planning  
 SLE743 Regional Development Modelling

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Research Management

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Research Management
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurn Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	One year part-time
<i>Deakin course code</i>	S521
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*International students – Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin’s Cloud Campus.*

## Course overview

The Graduate Certificate of Research Management is designed for professional research administrators and research policy developers wishing to further their expertise to support research in the Higher Education sector as well as industry and government departments.

The course aims to provide practical skills and insights for managing research and policy environments.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

Approximately 150 hours of learning and assessment activities per Deakin credit point.

## Career opportunities

The course is designed for research administrators and policy makers. Potential employers include Universities, CSIRO, government research institutes and departments, private research institutes, and industrial research companies.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin’s website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate specialist knowledge of research management and capacity to apply scientific research principles and methodologies to investigate recent scientific developments of significant impact.  Demonstrate capacity for supporting research project initiatives in academic and industry contexts by analysing needs, scope and the nature of research for effective management.
Communication	Present a reasoned argument that justifies the need, highlights essential details of scientific procedures, key observations, results and conclusions using appropriate style, language and references including local, national, and international contributions or contexts.
Digital literacy	Use well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise and disseminate scientific literature in the planning research projects.
Critical thinking	Appraise complex scientific methodologies and information using critical, analytical and logical reasoning from multiple perspectives for evaluating the merits of scientific methodologies, theoretical propositions and practice.
Problem solving	Not Assessed
Self-management	Work autonomously, responsibly and safely to analyse unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.
Teamwork	Not Assessed
Global citizenship	Demonstrate scientific research management skills, including high level of autonomy, judgement, responsibility and accountability in the local, national and global academic and industry contexts.

## Course rules

To complete the Graduate Certificate of Research Management, students must attain 4 credit points completed over one year of part-time study.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SLE761	Research Planning and Communication
SLE762	Research Impact and Management
SSC700	Academic Writing and Communication

Plus one level 7 elective unit

## Further study

- S772 Master of Biotechnology and Bioinformatics
- S721 Master of Sustainability

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Cyber Security

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Cyber Security
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Waurin Ponds (Geelong)
<i>Duration</i>	One year part-time
<i>Deakin course code</i>	S535 (version 1)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

In today's digital world, cyber-attacks are becoming everyday occurrences. Cyber security professionals are employed to protect organisations from cyber-attacks and are in high demand. This course can prepare you for a successful security career anywhere in the cyber world.

Throughout the Graduate Certificate of Cyber Security, you will learn how to confront cyber security challenges and understand what the key issues are. You will focus on a range of studies, and gain knowledge about system security and digital forensics, analytics, organisational security and human issues.

This course gives you the cyber security skills that are crucial to the success of our digital future. And, once you graduate, you'll have the knowledge and talent to take on an expert security role within business, government or law enforcement.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Career options are varied so you could work anywhere in the world as a:

- security analyst
- project manager
- security system manager
- cryptographer
- security consultant
- security system developer or programmer information security auditor
- business continuity or IT security engineer.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

After successfully completing your graduate certificate, you can continue your study by using the credit points you've earned to enter the Master of Cyber Security (S734).

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop specialised and essential knowledge of security needs, design and development, systems, processes, concepts and technologies to develop software systems, products and solutions that automates business processes at par with industry standards and based on cyber security needs.
Communication	Communicate IT solutions as appropriate to the context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Use digital media to locate, collect and evaluate information from technical channels and apply information to identify approaches and solutions that meet user requirements.
Critical thinking	Use the frameworks of logical and analytical thinking to evaluate specialist IT information, technical problems and user requirements, and develop approaches to identify solutions.
Problem solving	Develop IT solutions for automating processes by investigating technical and business problems; design and propose alternative solutions that improve services and user experiences.
Self-management	Demonstrate the ability to work in a professional manner, learn autonomously and responsibly in order to identify and meet development needs.

*Approved by Faculty Board 7 June 2018*

## Course rules

To complete the Graduate Certificate of Cyber Security, students must attain 4 credit points (one year part-time study).

The course comprises a total of 4 credit points, which must include the following:

- four (4) core units
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
MIS782	Value of Information
SIT719	Security and Privacy Issues in Analytics
SIT763	Cyber Security Management
SIT716	Computer Networks and Security

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

<i>Deakin course code</i>	S535FL (version 1)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*International students – Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin’s Cloud Campus.*

## Course overview

In today’s digital world, cyber-attacks are becoming everyday occurrences. Cyber security professionals are employed to protect organisations from cyber-attacks and are in high demand. This course can prepare you for a successful security career anywhere in the cyber world.

Throughout the Graduate Certificate of Cyber Security, you will learn how to confront cyber security challenges and understand what the key issues are. You will focus on a range of studies, and gain knowledge about system security and digital forensics, analytics, organisational security and human issues.

This course gives you the cyber security skills that are crucial to the success of our digital future. And, once you graduate, you’ll have the knowledge and talent to take on an expert security role within business, government or law enforcement.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Career options are varied so you could work anywhere in the world as a:

- security analyst
- project manager
- security system manager
- cryptographer
- security consultant
- security system developer or programmer information security auditor
- business continuity or IT security engineer.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin’s website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

After successfully completing your graduate certificate, you can continue your study by using the credit points you've earned to enter the Master of Cyber Security (734).

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop specialised and essential knowledge of security needs, design and development, systems, processes, concepts and technologies to develop software systems, products and solutions that automates business processes at par with industry standards and based on cyber security needs.
Communication	Communicate IT solutions as appropriate to the context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Use digital media to locate, collect and evaluate information from technical channels and apply information to identify approaches and solutions that meet user requirements.
Critical thinking	Use the frameworks of logical and analytical thinking to evaluate specialist IT information, technical problems and user requirements, and develop approaches to identify solutions.
Problem solving	Develop IT solutions for automating processes by investigating technical and business problems; design and propose alternative solutions that improve services and user experiences.
Self-management	Demonstrate the ability to work in a professional manner, learn autonomously and responsibly in order to identify and meet development needs.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Graduate Certificate of Cyber Security, students must attain 4 credit points and complete STP050 Academic Integrity (0-credit-point compulsory unit) as outlined below.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
MIS782	Value of Information
SIT719	Security and Privacy Issues in Analytics
SIT763	Cyber Security Management
SIT716	Computer Networks and Security

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Artificial Intelligence

<i>Year</i>	2019 Course Information
<i>Award granted</i>	Graduate Certificate of Artificial Intelligence
<i>Campus</i>	Offered at Waurin Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>CRICOS course code</i>	
<i>Deakin course code</i>	S536
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*New course commencing Trimester 1 2020*

## Course overview

Artificial intelligence is driving digital disruption, with new technology helping redefine many industries. Many companies are looking to take advantage of recent advances in artificial intelligence, which is creating a large demand for skilled professionals.

Deakin's suite of courses in Applied Artificial Intelligence will equip you with specialist knowledge and skills necessary to design and develop advanced solutions using artificial intelligence. The Graduate Certificate of Applied Artificial Intelligence provides IT professionals with foundational knowledge of artificial intelligence.

This course gives you the essential skills and knowledge to engage with artificial intelligence across a range of industries and prepares you for further studies in artificial intelligence.

You will gain hands-on experience in the use and development of artificial intelligence and its mathematical foundation. Our world-leading research in artificial intelligence feed directly into our classrooms, meaning that you'll be learning at the cutting edge of industry expectations and capabilities.

As a graduate you will be familiar with the underpinnings of artificial intelligence and machine learning.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week, with units requiring on average 150 hours of study per credit point. This could include classes, seminars, practicals, studios and online interaction. You can refer to the individual unit details in the course structure for more information. In addition to scheduled activities, you will need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates of the Graduate Certificate of Applied Artificial Intelligence will be able to engage effectively with specialists in the area of artificial intelligence.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning and collaborative research training arrangements.

## Mandatory student checks

Any unit which contains work-integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. Refer to the relevant unit guide.

## Pathways

Upon completion of the Graduate Certificate of Artificial Intelligence you could use the credit points you've earned to enter into further study, including:

- Master of Applied Artificial Intelligence
- Master of Applied Artificial Intelligence (Professional)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a broad knowledge of the technologies of artificial intelligence.
Communication	Prepare a range of technical and user-oriented documentation using adequate structure, terminology.
Digital literacy	Identify, select and use a range of digital technologies and tools to generate, manage and share digital resources associated with advanced artificial intelligence concepts and solutions.
Critical thinking	<p>In assessing complex artificial intelligence scenarios, critically evaluate arguments, hypothesis, systems and proposals to identify basic statements.</p> <p>In assessing complex artificial intelligence scenarios, locate ambiguity and vagueness in arguments, requirements, and proposals to determine if ideas are reasonable, and identify information that may be contradictory, omitted, or not collected.</p> <p>In assessing complex artificial intelligence scenarios, apply judgement in evaluating ideas, associated reasoning, and available evidence to arrive at conclusions that are valid.</p>
Problem solving	<p>Apply technical skills, knowledge and techniques to identify and define complex problems utilising advanced artificial intelligence.</p> <p>Apply expert, specialised technical skills and knowledge in modelling methods and processes to understand problems, handle abstraction and design novel artificial intelligence solutions.</p>

Approved by Faculty Board 14 March 2019

## Course rules

To complete the Graduate Certificate of Artificial Intelligence, students must attain 4 credit points (part-time over 1 year) as detailed below.

The course comprises a total of 4 credit points, which must include the following:

- 3 credit points of core units
- 1 credit point Level 7 elective unit
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit point unit)
SIT720	Machine Learning
SIT787	Mathematics for Artificial Intelligence
SIT719	Security and Privacy Issues in Analytics

Plus one elective unit

### Work experience

You will have an opportunity to undertake a discipline-specific internship placement as part of your course. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

# Graduate Certificate of Engineering

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Engineering
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	One year part-time
<i>Deakin course code</i>	S550
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Certificate of Engineering can only be completed as an exit option from the Master of Engineering (Professional).

Units in the course may include assessment hurdle requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

To qualify for the award of Graduate Certificate of Engineering, you must successfully complete 4 credit points from the units listed below:

- completion of SEB711 and SEB725
- 2 credit points from a chosen specialisation

## Course structure

### Core units

STP050	Academic Integrity (0 credit points)
SEB711	Managing and Developing Innovation
SEB725	Engineering Entrepreneurship

Plus 2 credit points from a chosen specialisation from S751 Master of Engineering (Professional)

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Planning

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Planning
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1 year part-time
<i>Deakin course code</i>	S563
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Certificate of Planning can only be completed as an exit option from the Master of Planning (Professional). The course is made up of 4 credit points of study that will help you to develop an in depth awareness of planning issues from a variety of cross discipline perspectives.

Units in the course may include assessment hurdle requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline- specific knowledge and capabilities	Develop specialised knowledge of ever-changing environments to produce plans that guide the development and improvement of liveable sustainable environments and communities. Apply conceptual planning knowledge and capabilities with adaptability and fluency in improving sustainable environments and communities.
Communication	Communicate with audiences in a variety of contexts using oral, written, digital, graphic and interpersonal communication modes to motivate public and private decisions and to effect change.
Digital literacy	Use knowledge of relevant tools and methodologies to locate, collect, analyse, interpret and synthesise information in planning practice.
Critical thinking	Laterally think and review problems, scenarios, designs and plans to address planning problems.
Problem solving	Apply knowledge to identify environmental, cultural and social problems, devise ways to investigate and resolve opportunities and constraints, drawing on evidence, and producing solutions as the basis for appropriate action.
Self-management	Represent opinions and standards by working individually and collaboratively to produce designs and plans in a timely manner. Apply knowledge and skills in an independent way to solve contemporary planning problems.

Approved by Faculty Board 7 June 2018

## Course rules

To qualify for the award of Graduate Certificate of Planning, you must successfully complete 4 credit points from the units listed below:

- 2 core units
- 2 course elective units

## Course structure

### Core units

Students must complete at least 2 of the following units:

#### Trimester 1

- STP050 Academic Integrity (0 credit points)
- SRD761 Designing Urban Environments
- SRP782 Smart Cities and Infrastructure

#### Trimester 2

- SRA744 Urban Patterns and Precedents
- SRP781 Planning Processes and Practice

Plus 2 elective units chosen from S764 Master of Planning (Professional) units

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Data Analytics

<i>Year</i>	2019 Course Information
<i>Award granted</i>	Graduate Certificate of Data Analytics
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	0.5 year full-time or part-time equivalent
<i>Deakin course code</i>	S576
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*International students – Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin’s Cloud Campus.*

## Course overview

The Graduate Certificate of Data Analytics is ideal for students without a computing background, as well as those who’d like to bolster their industry experience with a recognised academic qualification.

With a focus on fundamental data analytics, this course covers foundation skills, security and privacy issues, research and development, and real world analytics. This course gives you the essential skills and knowledge for employment across a range of industries and prepares you for further studies in IT and Data Science.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Deakin’s Graduate Certificate of Data Analytics prepares students for professional employment across all sectors as data analytics specialists. Data analysts may find employment with organisations who make data-driven decisions, in areas including software development, pharmaceutical discovery, marketing, consulting, manufacturing, financial services, telecoms, e-commerce, retail, health care, public services, information security and more.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin’s website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

Upon completion of the Graduate Certificate of Data Analytics, you could use the credit points you've earned to enter into further study, including S777 Master of Data Science.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop data analytics solutions based on user requirements by applying foundational knowledge of real world analytics concepts and technologies.
Communication	Communicate data analytical solutions as appropriate to the context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Use digital media to locate and collect information to prepare for data analysis.
Critical thinking	Use the frameworks of logical and analytical thinking to evaluate data analytics information and user requirements.
Problem solving	Design solutions for automating data analysis processes by applying foundational technical knowledge and tools.
Self-management	Demonstrate the ability to work autonomously in order to meet requirements.
Teamwork	Not applicable
Global citizenship	Engage in professional and ethical behaviour in the collection, processing, and presentation of data.

*Approved by Faculty Board 6 September 2018*

## Course rules

To complete the Graduate Certificate of Data Analytics, students must attain 4 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 4 credit points, you'll need to study 4 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 4 credit points, which must include the following:

- Four (4) core Fundamental Data Analytics Studies units (SIT718, SIT719, SIT740, MIS770)(4 credit points)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SIT718	Real World Analytics
SIT719	Security and Privacy Issues in Analytics
SIT740	Research and Development in Information Technology
MIS770	Foundation Skills in Data Analysis

# Graduate Certificate of Data Science

<i>Year</i>	2019 Course Information
<i>Award granted</i>	Graduate Certificate of Data Science
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	One year part-time
<i>Deakin course code</i>	S577
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*International students – Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin’s Cloud Campus.*

## Course overview

The Graduate Certificate of Data Science covers a wide spectrum of subject areas, including modern data science concepts, statistical data analysis, descriptive analytics and machine learning. You will be equipped with the theory, methodologies, techniques and tools of modern data science and the ability to confidently work with any type of data, to identify trends, make predictions, draw conclusions, drive innovations, make decisions, and to share information that influences people.

This course gives you the essential skills and knowledge for employment across a range of industries and prepares you for further studies in Data Science.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates of this course are prepared for professional employment across all sectors as data science specialists. Professionals with a solid knowledge in data science and strong skills for analysing and interpreting data in today’s data-rich economy are in high demand and may find careers as data analysts, data scientists, analytics programmers, analytics managers, analytics consultants, business analysts, management advisors, management analysts, business advisors and strategists, marketing managers, market research analysts and marketing specialists.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin’s website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

Upon completion of the Graduate Certificate of Data Science, you could use the credit points you've earned to enter into further study, including S777 Master of Data Science.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop data analytics solutions based on user requirements by applying coherent knowledge of the analytics discipline using various machine learning and big data analytics tools and techniques. Apply statistical analysis and visualisation techniques appropriately to interpret analytics outcomes.
Communication	Communicate effectively in order to design, evaluate and respond to a range of data analytics problems and utilise a range of verbal, graphical and written forms, customised for diverse audiences.
Digital literacy	Utilise a range of digital technologies and information sources to discover, select, analyse, evaluate and disseminate both technical and professional information.
Critical thinking	Appraise information using logical and analytical thinking to identify user requirements and propose appropriate solutions.
Problem solving	Design solutions for automating data analysis processes by applying foundational technical knowledge and tools.
Self-management	Work autonomously and responsibly to create solutions to user problems and actively apply fundamental knowledge of data science and methodologies to meet user requirements.
Teamwork	Work independently and collaboratively towards achieving the outcomes of a group project.
Global citizenship	Engage in professional and ethical behaviour in the collection, processing, and presentation of data.

*Approved by Faculty Board 6 September 2018*

<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Certificate of Virtual and Augmented Reality can only be completed as an exit option from the Graduate Diploma of Virtual and Augmented Reality. The course is made up of 4 credit points of coursework units.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

To qualify for the award of Graduate Certificate of Virtual and Augmented Reality, you must successfully complete 4 credit points from the units listed below.

4 core coursework units

## Course structure

STP050	Academic Integrity (0 credit points)
SIT755	Interaction and Design for Virtual Reality and Augmented Reality
SIT756	Development for Virtual Reality
SIT757	Content Creation for Virtual Reality
SIT758	Virtual Reality On Mobile Platforms

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Professional Practice (Engineering)

<i>Year</i>	2019 Course Information
<i>Award granted</i>	Graduate Certificate of Professional Practice (Engineering)
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1–1.5 years full-time or part-time equivalent*
<i>Deakin course code</i>	S588
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*International students: due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in this fully online degree through Deakin's Cloud Campus.*

\* Students have the opportunity of fast-tracking the course in 1 year by completing units in consecutive trimesters and all credentials within the first two trimesters of study.

## Course overview

Completion of this qualification recognises the discipline-based knowledge and skills developed by professionals in the workplace and offers employers and professionals new ways to match capability and opportunity.

## Indicative student workload

Successful students typically spend about 150 hours in learning and assessment for each one credit point unit. The time required to prepare evidence for credential assessment varies based on the student's existing documentation.

## Career opportunities

Upon the completion of this program, graduates will demonstrate advanced skills and complex knowledge in the Engineering discipline areas they have selected to advance their career.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

There are currently no pathway or credit arrangements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an integrated understanding and superior ability to apply contemporary engineering theory and practices.
Communication	Use advanced communication tools, techniques and media to engage and inspire others about engineering professional practice.
Digital literacy	Discover, analyse, synthesise and disseminate complex engineering information, data and ideas to stakeholders, strategic partners and professional colleagues using a range of digital technologies and channels.
Critical thinking	Systematically and critically analyse and test engineering models and theories to develop optimise engineering solutions.
Problem solving	Apply advanced problem-solving skills to conceptualise, design, construct, test and provide proof of concept and market for innovative or entrepreneurial solutions.
Self-management	Advance personal development and capacity as an engineering manager to proactively drive and take responsibility for strategic results.
Teamwork	Work across a range of professions, functions, contexts or teams to optimise collaborative outcomes.
Global citizenship	Define and reinforce the vision and values that orient collective effort, socially responsibility and ethical decision making.

Approved by Faculty Board 19 October 2018

## Course rules

To qualify for the Graduate Certificate of Professional Practice (Engineering), students must successfully complete 2 core units (totalling 2 credit points) of formal study and 4 Professional Practice credentials, including at least 1 specialist knowledge credential. Each Professional Practice credential will assess the performance at a masters (advanced) level in one of the Deakin Graduate Learning Outcomes contextualised to Engineering.

The course comprises the following:

- 2 core units (totalling 2 credit points)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- 4 Professional Practice Credentials (Advanced Level)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SEP701	Introduction to Engineering Professional Practice
SEB725	Engineering Entrepreneurship

### Credentials

Plus 4 Professional Practice Credentials, including 1 specialist knowledge credential (completed at the advanced level) as follows. Students are able to commence their credentials at anytime, utilising Deakin's Start Anytime calendar.

Credential code	Professional practice credentials	Minimum level
CRCOM-A1	Communication (Masters-aligned)	Advanced
CRDIL-A1	Digital literacy (Masters-aligned)	Advanced
CRCRI-A1	Critical thinking (Masters-aligned)	Advanced
CRPSV-A1	Problem solving (Masters-aligned)	Advanced
CRSMA-A1	Self-management (Masters-aligned)	Advanced
CRTWK-A1	Teamwork (Masters-aligned)	Advanced
CRGCZ-A1	Global citizenship (Masters-aligned)	Advanced
CRPRE-A1	Professional ethics (Masters-aligned)	Advanced
<b>Knowledge based credentials:</b>		
CRENG-A1	Engineering Professional Expertise 1 (Masters-aligned)	Advanced
CRENG-A2	Engineering Professional Expertise 2 (Masters-aligned)	Advanced

## Graduate Certificate of Professional Practice (Information Technology)

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Professional Practice (Information Technology)
<i>Campus</i>	Cloud Campus – For students who commenced prior to 2018
<i>Duration</i>	1–1.5 years full-time or part-time equivalent
<i>Deakin course code</i>	S589 (version 1)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*The final intake to this course version was in 2017. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

# Graduate Certificate of Information Technology Leadership

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Information Technology Leadership
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Cloud (online)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1–1.5 years full-time or part-time equivalent
<i>Deakin course code</i>	S589 (version 4)
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*International students: due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in this fully online degree through Deakin's Cloud Campus.*

## Course overview

This innovative graduate certificate program awards a qualification largely based on recognition of professional practice and is ideally suited to experienced IT professionals with domain experience seeking career advancement.

The model offers employers and professionals an alternative to traditional higher education that is credible, validated and offers new ways to match capability and opportunity. This setup aims to help the professionals to reach their full potential by accelerating the completion of the program on the basis of prior learning and work experience.

Completion of this degree recognises the discipline-based knowledge and skills developed by professionals in the workplace and credentialed through Deakin. This is coupled with employability skills that are validated and endorsed through a final holistic assessment of the student. Upon the completion of this program, graduates will possess advanced skills and complex knowledge in the discipline areas they have selected to advance their career.

## Indicative student workload

Successful students typically spend about 150 hours in learning and assessment for each one credit point unit. The time required to prepare evidence for credential assessment varies based on the student's existing documentation.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate a broad and coherent knowledge of the IT discipline, including its dynamic environment, with expert knowledge of the technological aspects of IT.
Communication	Communicate effectively in order to design, evaluate and respond to advances in technology, future trends and industry standards and utilise a range of verbal, graphical and written forms, customised for diverse audiences including specialist and non-specialist clients, colleagues and industry personnel.
Critical thinking	Appraise complex information using critical and analytical thinking and judgement to identify problems, analyse user requirements and propose appropriate and innovative solutions.
Self-management	Work autonomously and responsibly to create solutions to new situations and actively apply knowledge of theoretical constructs and methodologies to make informed decisions.
Teamwork	Work independently and collaboratively towards achieving the outcomes of an IT project, thereby demonstrating interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, manage difficult and awkward conversations, provide constructive feedback, and demonstrate the ability to function effectively in diverse professional, social and cultural contexts.

Approved by Faculty Board 7 June 2018

## Course rules

To qualify for the Graduate Certificate of Information Technology Leadership, students must successfully complete 2 units (totalling 2 credit points of formal study and 3 Professional Practice credentials). Each Professional Practice credential will assess the performance at a masters (advanced) level in one of the Deakin Graduate Learning Outcomes contextualised to information technology. Students are also required to complete STP050 Academic Integrity (0-credit-point compulsory unit).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

Each unit below is delivered on FutureLearn and takes approximately 10 weeks to complete in addition to assessment tasks.

These units are broken down into easily-manageable two-week blocks, allowing you the freedom to fit learning around your work, family and lifestyle.

STP050	Academic Integrity (0 credit points)
SIT740	Research and Development in Information Technology
SIT752	Introduction to IT Professional Practice

## Credentials

Plus 3 Professional Practice Credentials (completed at the advanced level) as follows. Students are able to commence their credentials at anytime, utilising Deakin's Start Anytime calendar.

Credential code	Professional practice credentials	Minimum level
CRCOM-A1	Communication (Masters-aligned)	Advanced
CRTWK-A1	Teamwork (Masters-aligned)	Advanced
<b>Knowledge based credential:</b>		
CRITP-A2	Information Technology – Technical Proficiency (Masters-aligned)	Advanced

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Certificate of Construction Management

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Certificate of Construction Management
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	One year part-time
<i>Deakin course code</i>	S591
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*Note: Offered to continuing students only. Continuing students should contact their course advisor for further information. Further course structure information can be found in the handbook archive.*

*Please note that students who commenced S792 Master of Construction Management (Professional) or S791 Master of Construction Management from 2015 onwards are not able to exit with a Graduate Certificate of Construction Management.*

## Course overview

The Graduate Certificate of Construction Management is made up of 4 credit points of study which blend innovative practice and leading edge research using a case based approach to learning.

Deakin's post-graduate construction management courses provide students with the understanding, knowledge and skills in a variety of roles in quantity surveying and construction management. The course is suitable for personnel involved in the procurement of built facilities as consultants or contractors, as well as people in government departments and commercial organisations who are responsible for the procurement of such facilities.

The courses have been designed to suit the needs of two types of graduates:

- Graduates from a built environment and engineering background who are seeking to up-skill.
- Graduates who have completed an undergraduate degree from an unrelated discipline, wanting to formalise their entry into the construction management profession through an accredited construction management and quantity surveying pathway.

Students will work in a multi-disciplinary context with topics that are at the forefront of the built environment industry, such as: Project Feasibility Evaluation, Cost Planning, Professional Business Practice, Construction Measurement, Commercial Construction Organisation, Design Management, Legal Risk Management, Sustainability, Urban Ecologies and Strategic Construction Procurement.

The courses are designed to provide the specialist skills related to the theoretical, policy, evaluative and research frameworks that underpin the construction professions.

The Graduate Certificate of Construction Management can only be completed as an exit option from the Master of Construction Management.

Units in the course may include assessment hurdle requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

You must complete 4 credit points from the following units:

## Course structure

### Core units

- SRD760 Geo-Planning and Design
- SRV799 Built Environment Integrated Project

Choose any two units from the following:

- SRM750 Built Environment Professional Practice
- SRM751 Principles of Building Information Modelling
- SRM752 Advanced Project Management
- SRQ745 Construction Company Management
- SRQ762 Cost Planning
- SRQ763 Legal Risk Management
- SRQ764 Building Project Evaluation
- SRQ774 Construction Measurement
- SRQ780 Strategic Construction Procurement
- SRT750 Sustainable Futures
- SRT757 Building Systems and Environment

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Landscape Design

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Landscape Design
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S603
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Landscape Design can only be completed as an exit option from the Master of Landscape Architecture. The course is made up of 8 credit points of study that will help you to develop a solid appreciation of landscape architecture design, practice, thinking and equip you with the essential skills to engage in this discipline.

Units in the course may include assessment hurdle requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline- specific knowledge and capabilities	Apply specialised landscape design knowledge and capabilities with adaptability and fluency in designing, developing and improving sustainable environments and communities. Comprehend knowledge of history, theory and practice to design, develop and manage landscape design projects demonstrating initiative and judgement.
Communication	Communicate clearly and responsibly with generalist audiences in a variety of contexts using oral, written, digital, graphic and interpersonal communication modes to ideate, inform, motivate public and private landscape design decisions and to effect change.
Digital literacy	Apply knowledge of a range of relevant technical tools and methodologies to locate, collect, analyse, interpret and synthesise complex information in landscape design.
Critical thinking	Evaluate problems, scenarios, designs and plans to address landscape design problems at different scales and complexities using the lens and knowledge of existing and past landscape architecture theory and practice. Ideate to inform the creation of solutions to authentic real-world problems by comprehending systems and threads

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Use landscape design knowledge to identify environmental, cultural and social problems, devise ways to investigate and resolve opportunities and constraints, drawing evidence, and producing solutions as the basis for appropriate action. Make well founded choices in situations based on knowledge of social, economic, environmental, and cultural aspects of landscape design.
Self-management: working and learning independently, and taking responsibility for personal actions.	Represent and maintain good ethical standards and standards by working individually and collaboratively to produce designs and plans in a timely manner. Apply knowledge and skills in an independent way to solve contemporary landscape design problems.
Teamwork	Produce plans for diverse groups, including lay people, while representing and maintaining individual opinions and standards. Reflect on stakeholders needs and develop processes in order to work efficiently in teams to formulate integrated options.
Global citizenship	Engage with global trends and challenges confronting cities, settlements and regions and operate in a manner that recognises cultural diversity, the need for equity in outcomes and the knowledge of and implementation of medium ethical standards.

Approved by Faculty Board 7 June 2018

## Course rules

To qualify for the Graduate Diploma of Landscape Design (exit option only), students must successfully complete 8 credit points from the units listed below:

- 4 core units
- 4 course elective units

## Course structure

### Trimester 1

STP050 Academic Integrity (0 credit points)  
 SRL731 Landscape Narrating and Meaning  
 SRD760 Geo-Planning and Design

plus 2 elective units chosen from S703 Master of Landscape Architecture course elective units

### Trimester 2

SRL732 Plants, Design and Ecologies  
 SRL733 Indigenous Narratives and Processes

plus 2 elective units chosen from S703 Master of Landscape Architecture course elective units

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Sustainable Regional Development

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Sustainable Regional Development
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	087663G
<i>Deakin course code</i>	S604
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Sustainable Regional Development builds on the core units offered in the graduate certificate to provide students with an increased understanding of research planning and management, and the opportunity to undertake elective studies in a complementary area of their choosing. This course is ideally suited to those interested in acquiring knowledge about sustainable regional development, without the desire to pursue a research project.

You'll develop an in-depth understanding of the key biophysical, socioeconomic, geographic and infrastructure factors that influence the development of regions, as well as the strategic and technological tools to analyse and act on information to sustainably guide regional economic development.

Sustainable regional development is critical to the economic performance of both developed and developing countries. With two thirds of Australia's export earnings come from regional industries such as agriculture, tourism, retail, services and manufacturing, demand has risen sharply for professionals with the ability to undertake regional socioeconomic and environmental planning that looks to the long-term competitive advantages of regional areas, and propose appropriate policy responses.

As a graduate of this course, you'll be well prepared to take advantage of these opportunities and equipped with the knowledge, skills and competencies to create new economic, social and environmental opportunities for regional/rural areas and communities by harnessing changes in globalisation, population growth and climate change.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

This course will prepare students for a career in planning (strategic, economic, rural, environmental, statutory), management (including environmental management), policy development, socio-economic and demographic analysis among others. Potential employers include: government (national, state and local) departments and agencies with a focus on regional areas, economic development, agriculture, the environment or policy development; planning, economic and environmental firms; statutory authorities such as catchment management authorities; and any organisation seeking graduates with formal training in strategic thinking and planning.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternative exits

S504.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate mastery and specialist knowledge through the application of scientific research principles and methodologies in the investigation of recent developments within a chosen field of study. Plan and execute a substantial research project to demonstrate a deep understanding and mastery within that scientific field. Creatively apply high-level technical and cognitive skills to research activities in a professional and/or academic setting in order to demonstrate in-depth knowledge of scientific methodologies pertinent to a field of study.
Communication	Present a reasoned argument that highlights essential details of scientific procedures, key observations, results and conclusions of scientific research in a professional manner using appropriate style, language and references including local, national, and international contributions or contexts. Apply listening skills and effective communication skills to accommodate, encourage and answer questions from a range of audience and to defend research findings and scientific propositions.
Digital literacy	Use well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise and disseminate scientific literature in the planning and implementation of research projects. Reflect on information, data and results and develop strategies for disseminating research outcomes in a digital world.
Critical thinking	Appraise complex scientific methodologies and information using critical, analytical and logical reasoning from multiple perspectives for evaluating the merits of scientific methodologies, theoretical propositions and practice.
Problem solving	Demonstrate complex problem solving skills by identifying and creating solutions to real world ill-defined problems through scientific inquiry.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.
Teamwork	Work independently and collaboratively with advice from the supervisor towards achieving the outcomes of a research project and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in diverse professional, social and cultural contexts.
Global citizenship	Demonstrate scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability to articulate the place and importance of scientific inquiry in the local and global context.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Graduate Diploma of Sustainable Regional Development, students must attain 8 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 8 credit points, you'll need to study 8 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 8 credit points, which must include the following:

- five (5) core units
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- three (3) elective units selected from the list of discipline electives

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SLE740	Climate Change Adaptation and Mitigation
SLE742	Systems and Strategic Thinking
SLE761	Research Planning and Communication

plus one discipline area elective unit

##### Trimester 2

SLE741	Regional Development Economics and Planning
SLE743	Regional Development Modelling

plus two discipline area elective units

## Discipline area electives

### *Urban Planning*

- SRP782 Smart Cities and Infrastructure
- SRD760 Geo-Planning and Design
- SRA744 Urban Patterns and Precedents
- SRP761 Ecological Cities and Futures

### *Environment*

- SLE720 Risk Assessment and Control
- SLE721 Policy and Planning for Sustainable Development

### *Research*

- SLE763 Research Frontiers Project

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Sustainability

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Sustainability
<i>Campus</i>	This course is an exit option only
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S621
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Sustainability can only be completed as an exit option from the Master of Sustainability. The course is made up of 8 credit points of study that will provide you with specialised knowledge in your chosen area in either Environmental Management or Sustainable Regional Development.

## Participation requirements

It is important to note that some elective units may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

## Course rules

To qualify for the Graduate Diploma of Sustainability (exit option only), students must successfully complete 8 credit points from the units listed below.

## Specialisations

Refer to the details of each specialisation for availability.

- Sustainable Regional Development
- Environmental Management

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SLE761	Research Planning and Communication
SLE763	Research Frontiers Project

Plus 4 credit points from a specialisation (Advanced Disciplinary studies)

Plus two level 7 elective units

## Details of specialisations

### **Sustainable Regional Development – unit set code – SP-S000082**

*Burwood (Melbourne)*

#### Overview

Sustainable Regional Development is critical to the economic performance of both developed and developing countries, especially in the face of globalization, population growth, economic structural adjustments and climate change. Two thirds of Australia's export earnings come from regional industries such as agriculture, tourism, retail, services and manufacturing. As such, demand has risen sharply for professionals with the ability to undertake regional socioeconomic and environmental planning that looks to the long-term competitive advantages of regional areas, and propose appropriate policy responses.

The specialisation is appropriate for developed and developing country contexts. Graduates will develop an in-depth understanding of the key biophysical, socioeconomic, geographic and infrastructure factors that influence the development of regions, as well as the strategic and technological tools to analyse and act on information to sustainably guide regional economic development.

#### Units

SLE740	Climate Change Adaptation and Mitigation
SLE741	Regional Development Economics and Planning
SLE742	Systems and Strategic Thinking
SLE743	Regional Development Modelling

### **Environmental Management – unit set code – SP-S000084**

*Burwood (Melbourne)*

#### Overview

Environmental Management involves a multidisciplinary approach to examining why environmental impacts occur and developing appropriate solutions to managing these impacts. Contemporary approaches require a multifaceted combination of techniques that address environmental, social and economic issues. Balancing resources and employment against environmental impacts requires specialised knowledge and skills, such that environmental managers need to be able to understand government policy direction, legislative compliance issues and analyse risk to the environment, often on a global scale. This specialisation prepares students to address the unique issues and challenges faced in this field.

#### Units

SLE720	Risk Assessment and Control
SLE721	Policy and Planning for Sustainable Development
SLE740	Climate Change Adaptation and Mitigation
SLE725	Environmental Management Systems

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Cyber Security

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Cyber Security
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	This course is an exit option only
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S635
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

In today's digital world, cyber-attacks are becoming everyday occurrences. Cyber security professionals are employed to protect organisations from cyber-attacks and are in high demand. This course prepares you for a successful security career anywhere in the cyber world.

Throughout the Graduate Diploma of Cyber Security, you will learn how to confront cyber security challenges and understand what the key issues are. You will focus on a range of studies, and gain knowledge about system security and digital forensics, analytics, organisational security and human issues.

This course gives you the cyber security skills that are crucial to the success of our digital future. And, once you graduate, you'll have the knowledge and talent to take on an expert security role within business, government or law enforcement.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Career options are varied so you could work anywhere in the world as a:

- security analyst
- project manager
- security system manager
- cryptographer
- security consultant
- security system developer or programmer information security auditor
- business continuity or IT security engineer.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop specialised and essential knowledge of security needs, design and development, systems, processes, concepts and technologies to develop software systems, products and solutions that automates business processes at par with industry standards and based on cyber security needs. Develop extended knowledge in the development and use of techniques, systems and approaches for secure communication and the systematic analysis of systems for features related to cyber security.
Communication	Communicate IT solutions as appropriate to the context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Use digital media to locate, collect and evaluate information from technical channels and apply information to identify approaches and solutions that meet user requirements.
Critical thinking	Use the frameworks of logical and analytical thinking to evaluate specialist IT information, technical problems and user requirements, and develop approaches to identify solutions.
Problem solving	Develop IT solutions for automating processes by investigating technical and business problems; design and propose alternative solutions that improve services and user experiences.
Self-management	Demonstrate the ability to work in a professional manner, learn autonomously and responsibly in order to identify and meet development needs.
Global citizenship	Engage in professional and ethical behaviour in the design of IT systems, in a global context, in collaboration with diverse communities and cultures.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Graduate Diploma of Cyber Security, students must attain 8 credit points and complete STP050 Academic Integrity (0-credit-point unit) as outlined below.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
MIS782	Value of Information
SIT719	Security and Privacy Issues in Analytics
SIT735	Communications Network Security
SIT703	Advanced Digital Forensics
SIT763	Cyber Security Management
SIT740	Research and Development in Information Technology
SIT716	Computer Networks and Security

### Electives

One additional level 7 SIT-coded elective unit.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Artificial Intelligence

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Artificial Intelligence
<i>Campus</i>	This course is an exit option only
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S636
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Artificial Intelligence is available as an exit option from the Master of Artificial Intelligence. The course provides you with an understanding of artificial intelligence, deep learning, reinforcement learning, and the application of these algorithms in computer vision and speech processing.

## Career opportunities

Graduates will have the specialist knowledge needed to operate and engage with artificial intelligence across a broad range of industry sectors.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Develop an advanced knowledge of the technologies of artificial intelligence, including deep learning and reinforcement learning, with detailed knowledge of the application of AI algorithms across a range of domains and applications including computer vision and speech processing.</p> <p>Design, develop and implement software solutions that incorporate novel applications of artificial intelligence.</p> <p>Design artificial intelligence solutions that incorporate safe ethical decision making.</p>

Deakin graduate learning outcomes	Course learning outcomes
Communication	<p>Prepare a range of technical and user-oriented documentation using adequate structure, terminology and context to address technical and non-technical audiences.</p> <p>Convey information and instructions in a clear, concise and coherent manner using appropriate oral communication techniques and skills for a broad range of audiences.</p> <p>Imagine, conceive, and represent ideas using IT conventions, modelling languages, and standards to reflect on complex artificial intelligence ideas and processes in an effective manner.</p> <p>Apply interpersonal skills to lead, proactively assist, contribute to ideas, respect opinions and value contribution made by others when working collaboratively with a wide range of stakeholders.</p>
Digital literacy	<p>Identify, select and use a range of digital technologies and tools to generate, manage and share digital resources associated with advanced artificial intelligence concepts and solutions.</p> <p>Independently and systematically locate information, evaluate its reliability, and use the information for design, problem solving and research purposes.</p> <p>Recommend and use appropriate practices and processes to ensure the security, integrity, safety and availability of digital resources.</p>
Critical thinking	<p>In assessing complex artificial intelligence scenarios, critically evaluate arguments, hypothesis, systems and proposals to identify basic statements.</p> <p>In assessing complex artificial intelligence scenarios, locate ambiguity and vagueness in arguments, requirements, and proposals to determine if ideas are reasonable, and identify information that may be contradictory, omitted, or not collected.</p> <p>In assessing complex artificial intelligence scenarios, apply judgement in evaluating ideas, associated reasoning, and available evidence to arrive at conclusions that are valid.</p>
Problem solving	<p>Apply expert, specialised technical skills, knowledge and techniques to identify and define complex problems utilising advanced artificial intelligence in a variety of contexts.</p> <p>Apply expert, specialised technical skills and knowledge in modelling methods and processes to understand problems, handle abstraction and design novel artificial intelligence solutions.</p> <p>Apply expert, specialised technical skills and knowledge to develop innovative and creative approaches and/or solutions in planning, designing, managing, evaluating and executing complex artificial intelligence projects.</p> <p>Integrate knowledge of social, safety, legal and cultural aspects to solve problems in complex and contradictory situations.</p>

Deakin graduate learning outcomes	Course learning outcomes
Self-management	<p>Evaluate own knowledge and skills with relation to wider artificial intelligence community and use frameworks of reflection to define and progress professional goals.</p> <p>Recognise the need, and engage in, independent learning for continual development of specialist knowledge and skills in artificial intelligence as a computing professional.</p> <p>Demonstrate the ability to accept responsibility for objectives, and work under broad direction, engaging in the feedback process independently to ensure outcomes are achieved.</p>
Teamwork	Contribute specialist knowledge and skills of artificial intelligence when working within a team, demonstrating high levels of responsibility and accountability.
Global citizenship	Apply professional ethics, responsibilities, and norms of professional computing practice.

Approved by Faculty Board 14 March 2019

## Course rules

To complete the Graduate Diploma of Artificial Intelligence, students must attain 8 credit points as detailed in the course structure.

The course comprises a total of 8 credit points, which must include the following:

- 3 credit points of core units
- 4 credit points from the Master of Applied Artificial Intelligence core units
- 1 credit point Level 7 elective unit
- 1 zero-credit point unit STP050 Academic Integrity

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

Mandatory unit for all entry levels:

STP050 Academic Integrity (0-credit-point unit)

### Part A: Introductory Artificial Intelligence Studies

SIT720 Machine Learning  
 SIT787 Mathematics for Artificial Intelligence  
 SIT719 Security and Privacy Issues in Analytics

### Part B: Mastery Applied Artificial Intelligence Studies

Select four units from the following:

SIT744 Practical Machine Learning for Data Science  
 SIT796 Reinforcement Learning ^  
 SIT799 Human Aligned Artificial Intelligence  
 SIT789 Applications of Computer Vision and Speech Processing  
 SIT788 Engineering AI Solutions  
 SIT764 Project Analysis and Design

Plus one elective unit

^ Available from 2021

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Engineering

<i>Year</i>	2019 Course Information
<i>Award granted</i>	Graduate Diploma of Engineering
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S652
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Engineering is available as an exit option from the Master of Engineering.

Similar to the Master's programme, you'll focus on practical and real-world problems through which you will develop technical and project management skills, and the ability to work as part of a team. Throughout the degree you will acquire advanced engineering skills along with critical-thinking, innovative problem-solving and entrepreneurial skills that employers are looking for, while strengthening and extending your understanding of engineering through the pursuit of specialised study.

## Indicative student workload

Approximately 150 hours of learning and assessment activities per Deakin credit point.

## Career opportunities

Graduates of this course may find career opportunities in a wide range of industries associated with their study area. Employers are looking for graduates who are fully equipped with advanced engineering skills and capable of starting work projects immediately. With strong demand for professional engineers continuing to increase, engineering graduates can be selective about the location and type of employer they want to work for.

## Mandatory student checks

Any unit which contains work-integrated learning, a community placement or interaction with the community may require a police check, working with children check or other check. Refer to the relevant unit guide.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Judiciously apply knowledge of engineering principles, techniques and, project management skills to systematically investigate, interpret and analyse complex problems and issues, to ensure that technical and non-technical considerations including costs, risk and limitations are properly evaluated and integrated as desirable outcomes of engineering projects and practice.</p> <p>Take responsibility for engineering solutions, projects and programs, and ensure reliable functioning of all materials, components, sub-systems and technologies as well as all interactions between the technical system and the context within which it functions to form a complete, sustainable and self-consistent system that optimises social, environmental and economic outcomes over its full lifetime.</p>
Communication	Prepare high quality engineering documents and present information including approaches, procedures, concepts, solutions, and technical details in oral, written and/or visual forms appropriate to the context, in a professional manner.
Digital literacy	Use a wide range of digital engineering and scientific tools and techniques to analyse, simulate, visualise, synthesise and critically assess information and methodically and systematically differentiate between assertion, personal opinion and evidence for engineering decision-making.
Critical thinking	Identify, discern, and characterise salient issues, determine and analyse causes and effects, justify and apply appropriate assumptions, predict performance and behaviour, conceptualise engineering approaches and evaluate potential outcomes against appropriate criteria to synthesise solution strategies for complex engineering problems.
Problem solving	<p>Apply technical knowledge, problem solving skills, appropriate tools and resources to design components, elements, systems, plant, facilities, processes and services to satisfy user requirements taking in to account broad contextual constraints such as social, cultural, economic, environmental, legal, political and human factors as an integral factor in the process of developing responsible engineering solutions.</p> <p>Identify recent developments, develop alternative concepts, solutions and procedures, appropriately challenge engineering practice from technical and non-technical viewpoints and thereby demonstrate capacity for creating new technological opportunities, approaches and solutions.</p>
Self-management	Commit to and uphold codes of ethics, established norms, standards, and conduct that characterises accountability and responsibility as a professional engineer, while ensuring safety of other people and protection of the environment.

Deakin graduate learning outcomes	Course learning outcomes
Teamwork	Function effectively as a team member, take various team roles, consistently complete all assigned tasks within agreed deadlines, proactively assist, contribute to ideas, respect opinions and value contribution made by others when working collaboratively in learning activities to realise shared team objectives and outcomes.
Global citizenship	Actively seek traditional, current and new information to assess trends and emerging practice from local, national and global sources and appraise the diversity, equity and ethical implications for professional practice.

Approved by Faculty Board 6 September 2018

## Course rules

To complete the Graduate Diploma of Engineering, students must attain 8 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 8 credit points, you'll need to study 8 units (AKA 'subjects') over your entire degree.

The course comprises a total of 8 credit points, which must include the following:

- 4 core units (totalling 4 credit points)
- 4-credit points from the specialisation list below.
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Specialisations

Refer to the details of each specialisation for availability.

- Civil Engineering (commencing Trimester 2, 2019)
- Electrical and Renewable Energy Engineering
- Mechanical Engineering Design
- Mechatronics Engineering

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SEB711	Managing and Developing Innovation
SEB725	Engineering Entrepreneurship
SET721	Engineering Sustainability
SEN700	Research Methodology

plus four (4) credit points from specialisations below.

## Work experience

Students will be required to take an active role in their learning and apply critical thinking and problem-solving skills complete practical projects strategically placed within units of study.

## Details of specialisations

### **Civil Engineering – unit set code – SP-S000087**

(New from Trimester 2, 2019)

*Waurm Ponds (Geelong)*

#### Overview

The civil engineering specialisation focuses on the theme of infrastructure engineering and provides students with advanced knowledge in four major sub disciplines of civil engineering, namely, structural engineering, geotechnical engineering, transportation systems, and water management.

#### Units

SEN725	Urban Stormwater Management
SEN727	Advanced Geomechanics *
SEN728	Transportation Infrastructure Systems
SEN769	Advanced Structural Design *
SEV402	Traffic and Transport Engineering
SEV415	Infrastructure Engineering

\* available from 2020

### **Electrical and Renewable Energy Engineering – unit set code – SP-S000088**

*Cloud (online), Waurm Ponds (Geelong)*

#### Overview

This specialisation provides unique technical, research and practical learning experiences to prepare graduates for professional and leadership roles in contemporary power system environments.

Students will have access to industry-standard tools and world-class facilities, as well as opportunities to engage with internationally recognised teaching and research staff who have extensive experience in electrical and renewable energy.

#### Units

SEE406	Power System Analysis
SEE407	SCADA and PLC
SEE705	Energy Efficiency and Demand Management
SEE716	Electrical Systems Protection
SEE717	Smart Grid Systems
SEE718	Renewable Energy Systems

### **Mechanical Engineering Design – unit set code – SP-S000089**

*Waurm Ponds (Geelong)*

#### Overview

Product development and innovation are key drivers for Australian industry. To meet this demand, this specialisation brings together studies in leading computer-aided engineering technologies, and advanced materials and manufacturing, while drawing on Deakin's world-class research teams in a practical and applied approach. You will acquire a solid understanding of product and process modelling and designing for sustainability.

#### Units

SEM400	Computational Fluid Dynamics
SEM711	Product Development Technologies
SEM712	CAE and Finite Element Analysis
SEM721	Product Development
SEM722	Advanced Manufacturing Technology
SEM724	Design for Additive Manufacturing

## ***Mechatronics Engineering – unit set code – SP-S000090***

*Waurin Ponds (Geelong)*

### **Overview**

This specialisation allows students to enhance the skills acquired through their undergraduate degree and specialise in technological areas associated with electronics. Students will have opportunities to explore interests in power systems, instrumentation and process control; sensor networks; and embedded systems.

### **Units**

SEE407	SCADA and PLC
SEE701	Control Systems Engineering
SEE710	Instrumentation and Process Control
SEE711	Sensor Networks
SEE712	Embedded Systems
SER400	Virtual and Augmented Interfaces

# Graduate Diploma of Planning

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Planning
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S663
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Planning can only be completed as an exit option from the Master of Planning (Professional). The course is made up of 8 credit points of study that will help you to consolidate your understanding of planning from a variety of cross-discipline perspectives.

As a graduate of the course you will be able to contribute to a variety of areas across a range of planning issues and be broadly equipped to collaborate on projects within the public and private sectors.

The Healthy Cities specialisation can only be completed in campus mode at Burwood (Melbourne).

Units in the course may include assessment hurdle requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline- specific knowledge and capabilities	Apply specialised knowledge of ever-changing urban, regional and rural environments to produce plans that guide the development and improvement of livable sustainable environments and communities. Apply coherent planning knowledge and capabilities with adaptability and fluency in professional practice for designing, developing and improving sustainable environments and communities.
Communication	Communicate responsibly with audiences in a variety of contexts using oral, written, digital, graphic and interpersonal communication modes to ideate, inform, motivate public and private planning decisions and to effect change. Engage stakeholders in ideas and concepts; mediate, negotiate and collaboratively resolve issues and planning conflicts; and propose actions appropriate to the situation.
Digital literacy	Use knowledge of relevant tools and methodologies including geographic information systems to locate, collect, analyse, interpret, assess modelling and scenario building and synthesise information for planning practice.

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	Laterally think and review problems, scenarios, designs and plans to address planning problems. Ideate to inform the creation of solutions to authentic real-world problems.
Problem solving	Apply planning knowledge to identify environmental, cultural and social problems, devise ways to investigate and resolve opportunities and constraints, drawing on research-based evidence, and producing solutions as the basis for appropriate action.
Self-management	Represent opinions and standards by working individually and collaboratively to produce designs and plans in an ethical and timely manner. Apply knowledge and skills in an independent way to solve contemporary planning problems and thereby demonstrate autonomous and judgements.
Teamwork	Produce plans with multi-disciplinary and diverse groups, including lay people, while representing and maintaining professional opinions and standards.

Approved by Faculty Board 7 June 2018

## Course rules

To qualify for the award of Graduate Diploma of Planning, you must successfully complete 8 credit points from the units listed below:

- 4 core units
- 4 course elective units

## Course structure

### Trimester 1

STP050 Academic Integrity (0 credit points)  
 SRD761 Designing Urban Environments  
 SRP782 Smart Cities and Infrastructure

plus 2 elective units chosen from S764 Master of Planning (Professional) units

### Trimester 2

SRA744 Urban Patterns and Precedents  
 SRP781 Planning Processes and Practice

plus 2 elective units chosen from S764 Master of Planning (Professional) units

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Biotechnology and Bioinformatics

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Biotechnology and Bioinformatics
<i>Campus</i>	This course is an exit option only
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S672
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Biotechnology and Bioinformatics can only be completed as an exit option from the Master of Biotechnology and Bioinformatics. The course is made up of 8 credit points of study that will provide you with hands-on experience of the latest techniques in biotechnology and bioinformatics research as well as up-to-date bio-processing and production technologies.

Units in the course may include assessment hurdle requirements.

## Participation requirements

It is important to note that some elective units may include compulsory placement, study tours, work-based training or collaborative research training arrangements.

## Course rules

To qualify for the Graduate Diploma of Biotechnology and Bioinformatics (exit option only), students must successfully complete 8 credit points from the units listed below.

## Course structure

STP050	Academic Integrity (0 credit points)
SLE761	Research Planning and Communication
SLE762	Research Impact and Management
SLE763	Research Frontiers Project
SLE703	Agricultural Biotechnology
SLE706	Frontier Techniques in Biotechnology and Nanotechnology
SLE712	Bioinformatics and Molecular Biology Techniques
SLE713	Industrial and Analytical Techniques in Biotechnology

Plus one level 7 elective unit

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Data Analytics

Year	2019 course information
Award granted	Graduate Diploma of Data Analytics
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Duration	1 year full-time or part-time equivalent
CRICOS course code	089187D
Deakin course code	S677
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*The final intake into this course version was in 2018. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

The Graduate Diploma of Data Analytics provides you with the specialist knowledge required to formulate solutions to complex data problems across a range of business settings – turning raw data sets into meaningful information to better guide business decisions.

This course aims to prepare you for specialised careers in data analytics by providing you with advanced working knowledge in statistics and data science. You'll draw on previous studies in IT, computing or related disciplines to focus on the specific application of data analysis in a business setting.

You'll get an understanding of the various origins of data to be used for analysis, combined with the central approaches and methods to manage, organise and manipulate such data, within regulatory, ethical and security constraints. You'll learn fundamental aspects of data science, modern methods, techniques and applications of data science.

You'll learn how to identify problems and understand the various techniques and methods that can be used to solve them. You'll be able to extract meaning from, make sense of, and draw conclusions from data. These skills will enable you to approach and represent different types of data, and to perform data analysis and statistical inference tasks of interest.

Data security and its governance have now become key issues for all organisations. As such, the various ethical, regulatory and governance aspects of analytics systems will be covered. Potential privacy and security issues associated with large data sets and the results obtained from analytics on such data are examined in detail.

As a graduate, you'll be ready for a career as a software developer, computer systems analyst/architect/engineer, marketing manager, market research analyst and marketing specialist, management analyst, web developer, network and computer systems administrator, IT project manager, or computer or IT research scientist.

Units in the course may include assessment hurdle requirements.

## Career opportunities

Graduates of this course may find careers as software developers, computer systems analysts/architects/engineers, marketing managers, market research analysts and marketing specialists, management analysts, web developers, network and computer systems administrators, IT project managers, computer and IT research scientists.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop specialised knowledge of data analytics concepts and technologies to solutions based on specifications and user requirements.
Communication	Communicate data analytical solutions as appropriate to the context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Use digital media to locate, collect and evaluate information from technical channels and apply information to design approaches and solutions that meet user requirements.
Critical thinking	Use the frameworks of logical and analytical thinking to evaluate data analytics information, technical problems and user requirements, and develop approaches to identify solutions.
Problem solving	Design solutions for automating data analysis processes by investigating technical and business problems; design and propose alternative solutions that improve services and user experiences.
Self-management	Demonstrate the ability to work in a professional manner, learn autonomously and responsibly in order to identify and meet development needs.
Global citizenship	Engage in professional and ethical behaviour in the design of data analytics systems, in a global context, in collaboration with diverse communities and cultures.

*Approved by Faculty Board 7 June 2018*

## Course rules

To complete the Graduate Diploma of Data Analytics, students must attain 8 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 8 credit points, you'll need to study 8 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 8 credit points, which must include the following:

- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Two (2) core analytics units (SIT719, SIT720)
- Four (4) 'Data' discipline specific units (SIT741, SIT742, SIT743, SIT744)
- Two (2) level 7 SIT/MIS-coded elective units

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SIT741	Statistical Data Analysis
SIT742	Modern Data Science

Plus two (2) course grouped elective units

##### Trimester 2

SIT719	Security and Privacy Issues in Analytics
SIT720	Machine Learning
SIT743	Multivariate and Categorical Data Analysis
SIT744	Practical Machine Learning for Data Science

### Electives

Select the remaining 2 credit points from a range of level 7 SIT/MIS-coded elective units.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

# Graduate Diploma of Data Science

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Data Science
<i>Campus</i>	This course is an exit option only
<i>Cloud Campus</i>	No

# Graduate Diploma of Information Technology

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Information Technology
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1 year full-time or part-time equivalent
<i>CRICOS course code</i>	035508E
<i>Deakin course code</i>	S678
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

Throughout the Graduate Diploma of Information Technology you will learn from a combination of leading-edge theory, technical knowledge and practical experience to develop confidence in problem solving through completion of a supervised project that provides you with the advanced skills required to tackle complex, industry-focused problems head on. The course is ideally suited to those who have completed an undergraduate degree in a discipline outside the fields of information systems or computer science.

You will be introduced to the concepts of system design and learn how to design and implement software independently. This includes designing systems with data abstraction, object-oriented analysis and design techniques together with necessary skills in managing an IT project and a team of IT professionals. You will explore the use of capturing, representing, storing, organising and retrieving information, and develop an understanding of the fundamentals of data modelling and database technology. You will also have the opportunity to explore the latest web programming technologies; techniques for creating web content using HTML, XML and JavaScript; and discuss how web servers and browsers provide functionality.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

A career in IT has almost endless possibilities. In today's IT job market multi-skilling, multi-tasking and cross-skilling are highly valued and Deakin graduates are well placed for a successful career in this industry. Our graduates are well-rounded IT professionals with the ability to meet the future needs of this ever-evolving, fast-moving industry.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternative exits

S578.

## Equipment requirement

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop specialised knowledge of software design and engineering, database, and web design concepts and technologies to develop software systems, products and solutions that automates business processes at par with industry standards and based on specifications and user requirements. Demonstrate extended knowledge in one or more areas of networking, IT security, software development and IT services to design advanced IT systems and solutions.
Communication	Communicate IT solutions as appropriate to the context to inform, motivate and effect change utilising a range of verbal, graphical and written methods, recognising the needs of diverse audiences.
Digital literacy	Use digital media to locate, collect and evaluate information from technical channels and apply information to design approaches and solutions that meet user requirements.
Critical thinking	Use the frameworks of logical and analytical thinking to evaluate specialist IT information, technical problems and user requirements, and develop approaches to identify solutions.
Problem solving	Design IT solutions for automating processes by investigating technical and business problems; design and propose alternative solutions that improve services and user experiences.
Self-management	Demonstrate the ability to work in a professional manner, learn autonomously and responsibly in order to identify and meet development needs.
Global citizenship	Engage in professional and ethical behaviour in the design of IT systems, in a global context, in collaboration with diverse communities and cultures.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Graduate Diploma of Information Technology, students must attain 8 credit points. Most students choose to study 4 units per trimester, however part-time equivalent is available.

Students are required to complete 4 IT foundation units, STP050 Academic Integrity (0-credit-point compulsory unit) and 4 credit points of level 7 SIT-coded units available within the Master of Information Technology.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Level 1

##### Trimester 1

- STP050 Academic Integrity (0 credit points)
- SIT771 Object-Oriented Development
- SIT773 Software Requirements Analysis and Modelling

plus 2 credit points from units listed within the Master of Information Technology

##### Trimester 2

- SIT772 Database and Information Retrieval
- SIT774 Web Technologies and Development

plus 2 credit points from units listed within the Master of Information Technology

#### Electives

Select from a range of level 7 IT elective units available within the Master of Information Technology.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Virtual and Augmented Reality

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Virtual and Augmented Reality
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S679
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*This course is not available to international students.*

## Course overview

Deakin's Graduate Diploma of Virtual and Augmented Reality provides a comprehensive curriculum that targets the key areas of virtual reality (VR) and augmented reality (AR). Virtual Reality (VR) is an immersive digital environment that can replicate lifelike physical environments or portray a fictional artificial world, and makes the user feel they are immersed in that environment in real-life. Augmented reality (AR) is created by enhancing real life objects/environments with a digital overlay.

Virtual reality (VR) and augmented reality (AR) are on track to be the next big computing environment due to the rapid uptake and development of the area. Virtual and augmented reality are integrated into a number of industries such as the healthcare, tourism advertising, entertainment, construction, gaming, education and space industries. This course enables graduates, regardless of their prior background, to integrate VR and AR experiences into their current business roles, and advance their business to the forefront of this incredibly exciting and innovative field that is VR/AR.

## Indicative student workload

You can expect to participate in a range of teaching activities each week involving evaluating, design and developing VR and AR experiences. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates find employment as designers and developers of VR and AR experiences. These include specialist roles such as VR experience designers, VR/AR programmers, augmented reality app designers, 3D designers, FX technical artists and gameplay engineers. This course will also prepare graduates working in industry to integrate VR and AR into existing work practices, thus becoming innovation managers, VR evangelists, VR team leads, AR product managers and VR/AR innovators.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternative exits

S579.

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, or telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Have a broad, coherent knowledge of the Virtual Reality (VR) and Augmented Reality (AR) discipline, including its dynamic environment, with an extended knowledge of technological aspects, development processes and applicability of VR/AR to various areas. Design, develop and implement advanced VR and AR assets, in line with appropriate policies and procedures for optimal use and apply industry standards and best practice.
Communication	Communicate effectively to impart knowledge relating to advances in technology, future trends and industry standards and utilise a range of verbal, graphical and written forms, customised for diverse audiences including specialist and non-specialist clients, colleagues and industry personnel.
Digital literacy	Utilise a range of digital technologies and information sources to select, analyse, evaluate, transform and disseminate both technical and non-technical information, solutions and knowledge to others.
Critical thinking	Appraise complex information using critical and analytical thinking and judgement to identify problems, analyse user requirements and propose appropriate and innovative solutions. Critically assess VR/AR assets and systems using applied knowledge to demonstrate autonomy, judgement, and adaptability as a responsible VR/AR professional.
Problem solving	Apply specialised advanced cognitive skills and knowledge to real-world, ill-defined problems and develop appropriate VR/AR designs.
Self-management	Apply knowledge and skills in creative ways to new situations in professional practice and/or further learning in the field of VR/AR with adaptability, autonomy, responsibility and personal accountability for actions as a practitioner and a learner.
Global citizenship	Apply the highest ethical standards in the design, development and operation of VR/AR assets and systems, in the global context of and/or in collaboration with diverse communities and cultures.

*Approved by Faculty Board 7 June 2018*

## Course rules

To complete the Graduate Diploma of Virtual and Augmented Reality, students must attain 8 credit points. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 8 credit points, which must include the following:

- Four (4) core coursework units
- One 4-credit point work placement unit in virtual reality (SIT759 Virtual Reality Professional Practice)
- Completion of STP710 Introduction to Work Placements (0 credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Exit option with a Graduate Certificate of Virtual and Augmented Reality is possible after completion of the 4 core coursework units.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
STP710	Introduction to Work Placements (0 credit points)
SIT755	Interaction and Design for Virtual Reality and Augmented Reality
SIT756	Development for Virtual Reality
SIT757	Content Creation for Virtual Reality
SIT758	Virtual Reality On Mobile Platforms

### Work placement

SIT759	Virtual Reality Professional Practice (4 credit points)#
--------	--

# Must have successfully completed STP710 Introduction to Work Placements (0 credit-point compulsory unit)

## Work experience

You complete assessment tasks using external client briefs as the basis for tasks. The resulting portfolio can then be shared with our VR industry partners to present evidence of competencies and to initiate conversations about employment opportunities.

You'll have the opportunity to undertake a work placement at virtual reality organisations as part of your course. This will provide you with the opportunity to apply and consolidate what you are learning in your course, experience workplace culture and workplace practices, explore career options and develop a professional network before you graduate.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Professional Practice (Engineering)

<i>Year</i>	2019 Course Information
<i>Award granted</i>	Graduate Diploma of Professional Practice (Engineering)
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1.5–2 years full-time or part-time equivalent*
<i>Deakin course code</i>	S688
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

*International students: due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in this fully online degree through Deakin's Cloud Campus.*

\* Students have the opportunity of fast-tracking the course by completing units in consecutive trimesters and all credentials within the first two trimesters of study.

## Course overview

Completion of this qualification recognises the discipline-based knowledge and skills developed by professionals in the workplace and offers employers and professionals new ways to match capability and opportunity.

## Indicative student workload

Successful students typically spend about 150 hours in learning and assessment for each one credit point unit. The time required to prepare evidence for credential assessment varies based on the student's existing documentation.

## Career opportunities

Upon the completion of this program, graduates will demonstrate advanced skills and complex knowledge in the Engineering discipline areas they have selected to advance their career.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

There are currently no pathway or credit arrangements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an integrated understanding and superior ability to apply contemporary engineering theory and practices.
Communication	Use advanced communication tools, techniques and media to engage and inspire others about engineering professional practice.
Digital literacy	Discover, analyse, synthesise and disseminate complex engineering information, data and ideas to stakeholders, strategic partners and professional colleagues using a range of digital technologies and channels.
Critical thinking	Systematically and critically analyse and test engineering models and theories to develop optimum engineering solutions.
Problem solving	Apply advanced problem-solving skills to conceptualise, design, construct, test and provide proof of concept and market for innovative or entrepreneurial solutions.
Self-management	Advance personal development and capacity as an engineering manager to proactively drive and take responsibility for strategic results.
Teamwork	Work across a range of professions, functions, contexts or teams to optimise collaborative outcomes.
Global citizenship	Define and reinforce the vision and values that orient collective effort, socially responsibility and ethical decision making.

Approved by Faculty Board 19 October 2018

## Course rules

To qualify for the Graduate Diploma of Professional Practice (Engineering), students must successfully complete 2 core units (totalling 2 credit points) of formal study and 6 Professional Practice credentials, including 2 specialist knowledge credentials. Each Professional Practice credential will assess the performance at a masters (advanced) level in one of the Deakin Graduate Learning Outcomes contextualised to Engineering.

The course comprises the following:

- 2 core units (totalling 2 credit points)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- 6 Professional Practice Credentials (Advanced Level)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SEP701	Introduction to Engineering Professional Practice
SEB725	Engineering Entrepreneurship

### Credentials

Plus 6 Professional Practice Credentials, including 2 specialist knowledge credentials (completed at the advanced level) as follows. Students are able to commence their credentials at anytime, utilising Deakin's Start Anytime calendar.

Credential code	Professional practice credentials	Minimum level
CRCOM-A1	Communication (Masters-aligned)	Advanced
CRDIL-A1	Digital literacy (Masters-aligned)	Advanced
CRCRI-A1	Critical thinking (Masters-aligned)	Advanced
CRPSV-A1	Problem solving (Masters-aligned)	Advanced
CRSMA-A1	Self-management (Masters-aligned)	Advanced
CRTWK-A1	Teamwork (Masters-aligned)	Advanced
CRGCZ-A1	Global citizenship (Masters-aligned)	Advanced
CRPRE-A1	Professional ethics (Masters-aligned)	Advanced
<b>Knowledge based credentials:</b>		
CRENG-A1	Engineering Professional Expertise 1 (Masters-aligned)	Advanced
CRENG-A2	Engineering Professional Expertise 2 (Masters-aligned)	Advanced

# Graduate Diploma of Information Technology Leadership

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Information Technology Leadership
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1–1.5 years full-time or part-time equivalent
<i>Deakin course code</i>	S689
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Information Technology Leadership can only be completed as an exit option from the Master of Information Technology Leadership.

This innovative graduate diploma qualification is largely based on recognition of professional practice and is ideally suited to experienced IT professionals with domain experience seeking career advancement.

## Indicative student workload

Successful students typically spend about 150 hours in learning and assessment for each one credit point unit. The time required to prepare evidence for credential assessment varies based on the student's existing documentation.

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate a broad and coherent knowledge of the IT discipline, including its dynamic environment, with expert knowledge of the technological aspects of IT.
Communication	Communicate effectively in order to design, evaluate and respond to advances in technology, future trends and industry standards and utilise a range of verbal, graphical and written forms, customised for diverse audiences including specialist and non-specialist clients, colleagues and industry personnel.
Critical thinking	Appraise complex information using critical and analytical thinking and judgement to identify problems, analyse user requirements and propose appropriate and innovative solutions.
Self-management	Work autonomously and responsibly to create solutions to new situations and actively apply knowledge of theoretical constructs and methodologies to make informed decisions.
Teamwork	Work independently and collaboratively towards achieving the outcomes of an IT project, thereby demonstrating interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, manage difficult and awkward conversations, provide constructive feedback, and demonstrate the ability to function effectively in diverse professional, social and cultural contexts.

Approved by Faculty Board 7 June 2018

## Course rules

To qualify for the Graduate Diploma of Information Technology Leadership, students must successfully complete 2 units (totalling 2 credit points of formal study and 6 Professional Practice credentials). Each Professional Practice credential will assess the performance at a masters (advanced) level in one of the Deakin Graduate Learning Outcomes contextualised to information technology. Students are also required to complete STP050 Academic Integrity (0-credit-point compulsory unit).

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SIT740	Research and Development in Information Technology
SIT752	Introduction to IT Professional Practice

### Credentials

6 Deakin Professional Practice Credentials (completed at the advanced level) as follows. Students are able to commence their credentials at anytime, utilising Deakin's Start Anytime calendar.

Credential code	Professional practice credentials	Minimum level
CRCOM-A1	Communication (Masters-aligned)	Advanced
CRCRI-A1 CRPSV-A1	Critical thinking (Masters-aligned) OR Problem solving (Masters-aligned)	Advanced
CRTWK-A1	Teamwork (Masters-aligned)	Advanced
<b>Knowledge based credentials:</b>		
CRITP-A1	Information Technology – Technical Specialisation (Masters-aligned)	Advanced
CRITP-A2	Information Technology – Technical Proficiency (Masters-aligned)	Advanced

Plus one additional credential from the Master of Professional Practice (Information Technology).

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Graduate Diploma of Construction Management

<i>Year</i>	2019 course information
<i>Award granted</i>	Graduate Diploma of Construction Management
<i>Campus</i>	This course is an exit option only
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S691
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 8.

## Course overview

The Graduate Diploma of Construction Management is made up of 8 credit points of study which blend innovative practice and leading edge research using a case based approach to learning.

Deakin's postgraduate construction management courses provide students with the understanding, knowledge and skills in a variety of roles in construction management and construction economics. The course is suitable for personnel involved in the procurement of built facilities as consultants or contractors, as well as people in government departments and commercial organisations who are responsible for the procurement of such facilities.

The courses have been designed to suit the needs of two types of graduates:

- Graduates from a built environment and engineering background who are seeking to upskill.
- Graduates who have completed an undergraduate degree from an unrelated discipline with demonstrable professional experience, wanting to formalise their entry into the construction management profession through an accredited construction management and quantity surveying pathway.

Students will work in a multi-disciplinary context with topics that are at the forefront of the built environment industry, such as: Project Feasibility Evaluation, Cost Planning, Professional Business Practice, Construction Measurement, Commercial Construction Organisation, Design Management, Legal Risk Management, Sustainability, Urban Ecologies and Strategic Construction Procurement.

The courses are designed to provide the specialist skills related to the theoretical, policy, evaluative and research frameworks that underpin the construction professions.

The Graduate Diploma of Construction Management can only be completed as an exit option from the Master of Construction Management.

Units in the course may include assessment hurdle requirements.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop and demonstrate a complex body of knowledge of construction management and practices, cost planning and control, legal and risk management in order to manage construction companies and projects.
Communication	Communicate clearly, professionally and responsibly with specialist and non-specialist audiences in a variety of contexts using oral, written, graphical and interpersonal skills to inform, negotiate, lead and motivate a project team. Engage with a variety of participants and contributing influences including legal, economic and environmental impacts in construction projects to mediate, negotiate and collaboratively resolve issues and conflicts.
Digital literacy	Apply knowledge of relevant technical tools and methodologies to locate, collect, analyse and synthesise complex information from a variety of sources to prepare cost benefit plans and legal, risk and environment implication analyses for construction projects. Use digital technologies, including geographic information systems to evaluate and assess modelling and scenario building.
Critical thinking	Use expert reasoning and analysis skills, drawing on knowledge and information from a range of professional or scholarly sources to reflect on, analyse and synthesise complex legal, economic and environmental influences and impacts for collaboratively and independently planning and making decisions in construction.
Problem solving	Apply specialized technical skills and judgment to identify potential legal, environmental and economic risks and problems and recommend appropriate solutions for effective risk management in construction. Demonstrate autonomy and well-developed judgement to independently and collaborative generate strategies and solutions to manage construction projects at various stages including planning, implementing, construction and evaluation of the built environment.
Self-management	Apply critical reflection and use frameworks of self and peer evaluation to develop independent judgment, adaptability and responsibility for expert professional practice
Teamwork	Apply interpersonal skills to interact, contribute, collaborate and develop leadership skills through teamwork activities, and enhance project potential through shared individual and collective knowledge and creative capacity to optimise complex problems.
Global citizenship	Engage ethically and professionally when working in a variety of construction management situations through concern for legal, economic, environmental and social risks both nationally and globally.

Approved by Faculty Board 7 June 2018

## Course rules

Students must complete 8 credit points of study from the following units:

## Course structure

### Core units

#### Trimester 1

STP050	Academic Integrity (0 credit points)
SRM750	Built Environment Professional Practice
SRQ763	Legal Risk Management
SRQ780	Strategic Construction Procurement

Choose one of:

SRR782	Research Methodology
SRR720	Construction Research Frontiers

#### Trimester 2

SRM751	Principles of Building Information Modelling
SRQ745	Construction Company Management
SRQ764	Building Project Evaluation
SRQ774	Construction Measurement

## Course duration

# Master of Architecture

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Architecture
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waterfront (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	059382E
<i>Deakin course code</i>	S700
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Get a specialist education that builds upon an established background in architecture and built environment studies.

The Master of Architecture develops your skills and knowledge in architectural design research and resolution, urban ecologies and contexts, integrated project evaluation and performance-measured sustainable design. All of these are expected in modern professional practice.

You'll also undertake advanced studies in cultural, technological, design, environmental and theoretical knowledge. Plus, you'll study the ethical, evaluative and research frameworks which underpin the architecture field.

Deakin's Master of Architecture is professionally accredited within Australia by the Australian Institute of Architects, the Architects Registration Board of Victoria and the Architects Accreditation Council of Australia. This lets you to achieve your professional registration, taking your career one step further.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, workshops, site visits and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

This course is accredited (within Australia) by the Australian Institute of Architects, the Architects Registration Board of Victoria and the Architects Accreditation Council of Australia.

This course has been validated and recognised by the Board of Architects Malaysia to be included on their 'List of Recognised Architectural Programmes'.

## Career opportunities

Graduates will be required to complete an additional two years of work experience under the supervision of a registered architect in order to present for registration with the Architects Registration Board of Victoria and the Australian Institute of Architects.

## Participation requirements

Students are required to complete units in Trimester 3.

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Income support

Domestic students enrolled in certain postgraduate coursework programs may be eligible for student payment through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Create an architectural design through the exercise of knowledge, imagination and judgement in the context of economic, social, cultural and environmental responsibility. Plan and execute a substantial research project to show capacity for specialised knowledge in architectural contexts and thereby demonstrate the ability to continue professional development and/or scholarship. Use initiative to integrate well-developed knowledge of architectural history, theory, technology and practice to design, develop and manage architecture projects from project brief to architectural resolution and thereby demonstrate professionalism as an architectural graduate.
Communication	Communicate clearly, professionally and responsibly in a variety of interpersonal contexts using oral, written and visual communication modes to inform, motivate and persuade specialist and non specialist audiences about architectural ideas, decisions and predicted built outcomes. Imagine, conceive and represent ideas using the language of architecture, its codes and conventions to reflect on possibilities, and progress and resolve solutions within a design process. Demonstrate the capacity to listen, learn and engage with a variety of participants and contributing influences in architectural projects to mediate and collaboratively resolve issues and negotiate design complexity.
Digital literacy	Apply well-developed research, ideation and technical information literacy skills to independently locate, interpret and evaluate information content in a digital world. Disseminate creative and logical proposals using appropriate digital technologies relevant to architecture practice.

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	Selectively use linear, critical, logical and/or lateral mechanisms to analyse different forms of information; manipulate and transform information to propose possible solutions and thereby demonstrate the capacity for reflection in action for professional practice in architecture. Use reflection and judgement supported by a body of knowledge in order to efficiently formulate a strategy or argument appropriate to a theoretical, contextual, creative and/or technical architectural situation. Apply independent thought and capacity for analysis and synthesis of a particular area of discipline knowledge through coherent and focussed research practice.
Problem solving	Effectively research and Identify theoretical, cultural, social, technical and environmental architectural problems to establish a sound basis for project inception in familiar and unfamiliar contexts. Use a well-developed body of knowledge to justify, argue and persuade the significance, causes and consequences of architectural problems, and use a methodical approach to formulate potential solutions.
Self-management	Accumulate and document specialist knowledge of architecture theories, processes and practice using the frameworks of methodical research, creative activity and capacity for reflection on action to demonstrate responsibility for professional learning.
Teamwork	Apply interpersonal skills to interact, contribute and collaborate in team learning activities and to enhance project potential through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship	Formulate architectural responses through concern for economic, cultural, social and ethical values inherent in human landscape while consciously integrating quantitative and qualitative perspectives. Engage with global traditions and current trends in architectural practice in order to appreciate diversity, seek equity in outcomes and adopt ethical and professional standards.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Architecture, students must attain 16 credit points, which must include the following. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

- Completion of SRA710 Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

The 16 credit points include 9 core units, totalling 12 credit points (these are compulsory) and 4 course elective units (you can choose which ones to study from a prescribed list).

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

SRA710	Safety Induction Program (0 credit points)
STP050	Academic Integrity (0 credit points)
SRD763	Architectural Design Master Studio A (2 credit points)
SRD742	Architectural Design Master Studio B (2 credit points)
SRD765	Architectural Design and Resolution
SRD741	Architectural Design Research Studio
SRD766	Architecture Masterclass Studio (2 credit points)
SRA743	Critical Futures
SRT750	Sustainable Futures
SRM750	Built Environment Professional Practice
SRR782	Research Methodology

### Course elective units:

Students must select 4 credit points of course elective units from the list below:

SRT757	Building Systems and Environment
SRV799	Built Environment Integrated Project
SRM772	Built Environment Practical Assessment
SRR767	Built Environment Study Tour
SRQ762	Cost Planning
SRP761	Ecological Cities and Futures
SRL733	Indigenous Narratives and Processes
SRD762	Interdisciplinary Planning and Design
SRM781	Managing Change and Innovation
SRR711	Thesis (2 credit points)^
SRD764	Urban Design Studio
SRD760	Geo-Planning and Design
SRA742	Urban Perspectives

^ Students intending to apply for entry into Higher Degree by Research may be required to complete SRR711 Thesis.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You may choose to use one of your elective units to participate in a study tour to enhance your global architectural awareness and experience. You will also have an opportunity to contribute to the student led, designed and managed end of year curated exhibition – PaperSpace.

*The final intake to this course version was in 2018. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

This course is designed for students who have completed Deakin's Bachelor of Design (Architecture)/Bachelor of Construction Management combined course.

You'll get a specialist education that builds upon an established background in architecture and built environment studies. Unlike our Master of Architecture, the Master of Architecture (Design Management) requires only 1 year of full-time study instead of 2 years.

You'll develop your skills and knowledge in architectural design research, urban ecologies and other aspects expected in modern architectural professional practice.

You'll also undertake advanced studies in cultural, technological, design, environmental and theoretical knowledge. Plus, you'll study the ethical, evaluative and research frameworks which underpin the architecture field.

Deakin's Master of Architecture (Design Management) is professionally accredited within Australia by the Australian Institute of Architects, the Architects Registration Board of Victoria and the Architects Accreditation Council of Australia. This lets you achieve your professional registration, taking your career one step further.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

This course is accredited (within Australia) by the Australian Institute of Architects, the Architects Registration Board of Victoria and the Architects Accreditation Council of Australia.

## Career opportunities

Graduates from the architecture course may be sought after by private architectural practice firms, government organisations and private companies in property development, building and design.

Graduates will be required to complete an additional two years of work experience under the supervision of a registered architect in order to present for registration with the Architects Registration Board of Victoria and the Australian Institute of Architects.

Alternatively, students who are already practising qualified architects will be able to widen their breadth of study in the field.

## Income support

Domestic students enrolled in certain postgraduate coursework programs may be eligible for student income support through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.	<p>Create an architectural design through the exercise of knowledge, imagination and judgement in the context of economic, social, cultural and environmental responsibility.</p> <p>Plan and execute a substantial research project to show capacity for specialised knowledge in architectural contexts and thereby demonstrate the ability to continue professional development and/or scholarship.</p>
Communication: using oral, written and interpersonal communication to inform, motivate and effect change.	<p>Communicate clearly, professionally and responsibly in a variety of interpersonal contexts using oral, written and visual communication modes to inform, motivate and persuade specialist and non specialist audiences about architectural ideas, decisions and predicted built outcomes.</p> <p>Imagine, conceive and represent ideas using the language of architecture, its codes and conventions to reflect on possibilities, and progress and resolve solutions within a design process.</p> <p>Demonstrate the capacity to listen, learn and engage with a variety of participants and contributing influences in order to create, maintain and monitor design outcomes that achieve timely, efficient and cost effective delivery of the architectural project.</p>
Digital literacy: using technologies to find, use and disseminate information.	<p>Apply well-developed research, ideation and technical information literacy skills to independently locate, interpret and evaluate information content in a digital world.</p> <p>Disseminate creative and logical proposals using appropriate digital technologies relevant to architectural design management.</p>

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking: evaluating information using critical and analytical thinking and judgment.	<p>Selectively use linear, critical, logical and/or lateral mechanisms to analyse different forms of information; manipulate and transform information to propose possible solutions and thereby demonstrate the capacity for reflection in action for professional practice in architecture.</p> <p>Use reflection and judgement supported by a body of knowledge in order to efficiently formulate a strategy or argument appropriate to a theoretical, contextual, creative and/or technical design management situation.</p> <p>Apply independent thought and capacity for analysis and synthesis of a particular area of discipline knowledge through coherent and focussed research practice.</p>
Problem solving: creating solutions to authentic (real world and ill-defined) problems.	<p>Effectively research and Identify theoretical, cultural, social, technical and environmental architectural problems to establish a sound basis for project inception in familiar and unfamiliar contexts.</p> <p>Use a well-developed body of knowledge to justify, argue and persuade the significance, causes and consequences of architectural problems, and use a methodical approach to formulate potential solutions.</p>
Self-management: working and learning independently, and taking responsibility for personal actions.	Accumulate and document specialist knowledge of architecture theories, processes and practice using the frameworks of methodical research, creative activity and capacity for reflection on action to demonstrate responsibility for professional learning.
Teamwork: working and learning with others from different disciplines and backgrounds.	Apply interpersonal skills to interact, contribute and collaborate in team learning activities and to enhance project potential through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.	Formulate architectural responses through concern for economic, cultural, social and ethical values inherent in human landscape while consciously integrating quantitative and qualitative architectural design management perspectives.

Approved by Faculty Board 14 July 2016

## Course rules

To complete the Master of Architecture (Design Management), students must attain 8 credit points.

The course comprises a total of 8 credit points, which must include the following:

- Completion of SRA010 Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

# Master of Landscape Architecture

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Landscape Architecture
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waterfront (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	075364G
<i>Deakin course code</i>	S703
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Focused on sustainability and its economic, social and environmental underpinnings, Deakin's Master of Landscape Architecture has been designed for those who are passionate about becoming a landscape architect driven to improve the quality and development of our towns, cityscapes and regional landscapes.

The course provides students with the opportunity to specialise in project management, ecological sustainability, cultural heritage, urban design, and change management planning.

Distinguishing characteristics of this course include its engagement with ecology, spirit of place, people, Indigenous thought and urban design to inform and craft places of renewal, stimulation, healing and respect.

Graduates will be equipped with the leadership skills to challenge conventional thinking within complex environments as well as the practical skills required to deliver the creation and restoration of landscapes.

This course, professionally accredited by the Australian Institute of Landscape Architects (AILA), has been designed in direct consultation with AILA, potential employers, industry, government and professional representatives, and is co-taught by many of these representatives, to ensure it provides graduates with the knowledge, skills and competencies sought by employers.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, workshops, site visits and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Landscape Architecture is accredited by the Australian Institute of Landscape Architects (AILA, [www.aila.org.au](http://www.aila.org.au)). Graduates satisfy the educational requirements for AILA graduate membership as the first step towards applying for professional recognition as an AILA Corporate Member and Registered Landscape Architect.

## Career opportunities

As a graduate of Deakin's Master of Landscape Architecture, you may find employment in all fields of landscape architecture and landscape planning in both private practice and government entities.

The Master of Landscape Architecture has been designed in direct consultation with AILA, potential employers, industry, government and professional representatives. As a graduate of the course, you will have a developed understanding across a range of disciplines and will be equipped to collaborate on projects in delivering integrated solutions. Career opportunities for graduates may be found in all fields of landscape architecture and landscape planning, in both the public and private sectors.

## Participation requirements

Students are required to complete units in Trimester 3.

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Income support

Domestic students enrolled in certain postgraduate coursework programs may be eligible for student payment through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

## Alternate exits

Early exit options:

- Graduate Certificate of Landscape Design (S503)
- Graduate Diploma of Landscape Design (S603)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply an integrated specialised and scholarly knowledge of ever-changing urban, regional and rural environments to produce designs and plans that guide the development and improvement of liveable sustainable environments and communities. Apply broad and advanced discipline-specific landscape architecture knowledge and capabilities with adaptability and fluency in designing, developing and improving sustainable environments and communities. Synthesise knowledge of landscape architecture history, theory and practice to research, design, develop and manage landscape architectural projects demonstrating initiative and judgement through professional practice and scholarship. Develop in-depth understanding of specialist knowledge, contemporary landscape architecture practice and current research directions within the landscape architecture discipline.
Communication	Communicate clearly, professionally and responsibly with specialist and non-specialist audiences in a variety of contexts using oral, written, digital, graphic and interpersonal communication modes to ideate, inform, motivate public and private landscape architecture decisions and to effect change. Engage stakeholders in ideas and concepts; mediate, negotiate and collaboratively resolve issues and design conflicts; and propose logical actions with formulation and cohesion appropriate to the situation.
Digital literacy	Apply knowledge of relevant technical tools and methodologies to locate, collect, analyse, interpret and synthesise complex information in landscape architecture practice. Apply digital technologies, including geographic information systems, to evaluate and assess modelling and scenario building.
Critical thinking	Laterally think and review problems, scenarios, designs and plans to address landscape architecture problems at different scales and complexities. Ideate to inform the creation of solutions to authentic real-world problems by comprehending systems and threads. Subsequently implement plans in the particular circumstances of a place using the lens and knowledge of existing and past landscape architecture theory and practice. Acquire and apply cognitive skills to demonstrate mastery of landscape architecture theoretical knowledge to reflect critically on theory and professional practice or scholarship.
Problem solving	Apply and develop landscape architecture knowledge to identify environmental, cultural and social problems, devise ways to investigate and resolve opportunities and constraints, drawing on research-based evidence, and producing solutions as the basis for appropriate action. Make appropriate choices in ethically ambiguous situations based on knowledge of social, economic, environmental, and cultural aspects of landscape architecture.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Represent and maintain professional standards and opinions and standards by working individually and collaboratively to produce designs and plans in an ethical and timely manner. Apply knowledge and skills in an independent way to solve contemporary landscape architecture problems and thereby demonstrate autonomous and expert judgements.
Teamwork	Produce plans with multi-disciplinary and diverse groups, including lay people, while representing and maintaining professional opinions and standards. Critically reflect on stakeholders needs and develop processes in order to work efficiently in teams to formulate integrated landscape architecture options. Implement designs and plans with a commitment to shared goals by engaging in team processes and applying knowledge of advanced interpersonal skills and time management.
Global citizenship	Engage with global trends and challenges confronting cities, settlements and regions and operate in a manner that recognises and respects cultural diversity, the need for equity in outcomes and the knowledge of and implementation of high ethical professional standards. Interpret and document relevant protocols and governance frameworks in the development, implementation and administration of designs, strategic and statutory plans, policies and regulations.

Approved by Faculty Board 7 June 2018

## Course rules

To qualify for the Master of Landscape Architecture, students must successfully complete 16 credit points of study, including:

- 11 core units (13 credit points); and
- 3 credit points of course elective units
- completion of SRA710 Safety Induction Program (0 credit-point compulsory unit)
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core units

Students are required to complete 11 core units (totalling 13 credit points) from the list below:

SRA710	Safety Induction Program (0 credit points)
STP050	Academic Integrity (0 credit points)
SRD760	Geo-Planning and Design
SRD761	Designing Urban Environments
SRL731	Landscape Narrating and Meaning
SRL733	Indigenous Narratives and Processes
SRD764	Urban Design Studio
SRL732	Plants, Design and Ecologies
SRD762	Interdisciplinary Planning and Design
SRM750	Built Environment Professional Practice
SRR782	Research Methodology
SRD768	Landscape Design Masterclass (2cp)
SRR711	Thesis (2cp)

## Course elective units

Students must select 3 credit points of course elective units from the list below:

SRA742	Urban Perspectives
SRA744	Urban Patterns and Precedents ~
SRM752	Advanced Project Management
SRM772	Built Environment Practical Assessment
SRM781	Managing Change and Innovation
SRP761	Ecological Cities and Futures ~
SRP733	Contemporary Planning and Design Challenges *
SRP782	Smart Cities and Infrastructure ~
SRP781	Planning Processes and Practice *
SRQ762	Cost Planning
SRR767	Built Environment Study Tour

\* 2019 is the final offering for this unit.

~ 2020 is the final offering for this unit.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

To broaden your experience of the world, you will have an opportunity to participate in overseas placements and study tours as an elective option in your course.

# Master of Architecture (Design Management)

Year	2019 course information
Award granted	Master of Architecture (Design Management)
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	Offered at Waterfront (Geelong)
Cloud Campus	No
Duration	*1.5 years full-time or part-time equivalent
Deakin course code	S711
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

Not available in 2019.

*The Master of Architecture (Design Management) is available to students who have completed Deakin's combined course in architecture and construction management.*

\* Students have the opportunity of completing the course in one year full-time (3 trimesters) by undertaking units in trimester 3.

## Course overview

This course is designed for students who have completed a combined degree in architecture (accredited) and construction management.

You'll get a specialist education that builds upon an established background in architecture and built environment studies.

You'll develop your skills and knowledge in architectural design research, urban ecologies and other aspects expected in modern architectural professional practice.

You'll also undertake advanced studies in cultural, technological, design, environmental and theoretical knowledge. Plus, you'll study the ethical, evaluative and research frameworks which underpin the architecture field.

Deakin's Master of Architecture (Design Management) is professionally accredited within Australia by the Australian Institute of Architects, the Architects Registration Board of Victoria and the Architects Accreditation Council of Australia. This lets you achieve your professional registration, taking your career one step further.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

This course is on the Architects Accreditation Council of Australia (AACA) list of accredited architecture qualifications recognised by the Australian Institute of Architects and the Architects Registration Board of Victoria (ARBV).

## Career opportunities

Graduates from the architecture course may be sought after by private architectural practice firms, government organisations and private companies in property development, building and design. Graduates will be required to complete an additional two years of work experience under the supervision of a registered architect in order to present for registration with the Architects Registration Board of Victoria and the Australian Institute of Architects. Alternatively, students who are already practising qualified architects will be able to widen their breadth of study in the field.

## Participation requirements

Students are required to complete units in Trimester 3.

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Income support

Domestic students enrolled in certain postgraduate coursework programs may be eligible for student payment through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Create an architectural design through the exercise of knowledge, imagination and judgement in the context of economic, social, cultural and environmental responsibility. Plan and execute a substantial research project to show capacity for specialised knowledge in architectural contexts and thereby demonstrate the ability to continue professional development and/or scholarship.
Communication	Communicate clearly, professionally and responsibly in a variety of interpersonal contexts using oral, written and visual communication modes to inform, motivate and persuade specialist and non specialist audiences about architectural ideas, decisions and predicted built outcomes. Imagine, conceive and represent ideas using the language of architecture, its codes and conventions to reflect on possibilities, and progress and resolve solutions within a design process. Demonstrate the capacity to listen, learn and engage with a variety of participants and contributing influences in order to create, maintain and monitor design outcomes that achieve timely, efficient and cost effective delivery of the architectural project.

Deakin graduate learning outcomes	Course learning outcomes
Digital literacy	Apply well-developed research, ideation and technical information literacy skills to independently locate, interpret and evaluate information content in a digital world. Disseminate creative and logical proposals using appropriate digital technologies relevant to architectural design management.
Critical thinking	Selectively use linear, critical, logical and/or lateral mechanisms to analyse different forms of information; manipulate and transform information to propose possible solutions and thereby demonstrate the capacity for reflection in action for professional practice in architecture. Use reflection and judgement supported by a body of knowledge in order to efficiently formulate a strategy or argument appropriate to a theoretical, contextual, creative and/or technical design management situation. Apply independent thought and capacity for analysis and synthesis of a particular area of discipline knowledge through coherent and focussed research practice.
Problem solving	Effectively research and Identify theoretical, cultural, social, technical and environmental architectural problems to establish a sound basis for project inception in familiar and unfamiliar contexts. Use a well-developed body of knowledge to justify, argue and persuade the significance, causes and consequences of architectural problems, and use a methodical approach to formulate potential solutions.
Self-management	Accumulate and document specialist knowledge of architecture theories, processes and practice using the frameworks of methodical research, creative activity and capacity for reflection on action to demonstrate responsibility for professional learning.
Teamwork	Apply interpersonal skills to interact, contribute and collaborate in team learning activities and to enhance project potential through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship	Formulate architectural responses through concern for economic, cultural, social and ethical values inherent in human landscape while consciously integrating quantitative and qualitative architectural design management perspectives.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Architecture (Design Management), students must attain 12 credit points. Most students choose to study 4 credit points per trimester, and would have the opportunity to undertake three trimesters in one single year.

The course comprises a total of 12 credit points, which must include the following:

- 7 core units (including two core units of 2 credit points each)
- 3 course elective units
- Completion of SRA710 Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

SRA710	Safety Induction Program (0 credit points)
SRD765	Architectural Design and Resolution
SRD741	Architectural Design Research Studio
SRD766	Architecture Masterclass Studio (2 credit points)
SRM750	Built Environment Professional Practice
SRR782	Research Methodology
STP050	Academic Integrity (0 credit points)

One unit from:

SRD763	Architectural Design Master Studio A (2 credit points)
SRD742	Architectural Design Master Studio B (2 credit points)

One unit from:

SRA743	Critical Futures
SRT750	Sustainable Futures

### Course elective units

Students must select 3 credit points of course elective units from the list below:

SRT757	Building Systems and Environment
SRV799	Built Environment Integrated Project
SRM772	Built Environment Practical Assessment
SRR767	Built Environment Study Tour
SRQ762	Cost Planning
SRP761	Ecological Cities and Futures
SRL733	Indigenous Narratives and Processes
SRD762	Interdisciplinary Planning and Design
SRM781	Managing Change and Innovation
SRR711	Thesis (2 credit points)^
SRD764	Urban Design Studio
SRD760	Geo-Planning and Design
SRA742	Urban Perspectives

^ Students intending to apply for entry into Higher Degree by Research may be required to complete SRR711 Thesis.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### Other learning experiences

You may choose to use one of your elective units to participate in a study tour to enhance your global architectural awareness and experience. You will also have an opportunity to contribute to the student led, designed and managed end of year curated exhibition – PaperSpace.

# Master of Sustainability

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Sustainability
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	096752K
<i>Deakin course code</i>	S721
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

With globalisation, population growth and climate change affecting economies around the world, issues of 'sustainability' become increasingly critical. Throughout the Master of Sustainability, students will acquire advanced knowledge and contemporary skills in the multidisciplinary approaches to examining environmental impacts, why they occur and to developing appropriate solutions to managing these impacts. Explore how we can learn to meet the needs of the present without permanently negatively impacting our future.

Development of successful sustainability strategies involves a multi-disciplinary approach to both analysis of the risks to the environment while utilising a "triple bottom line" approach to solutions. That is managing the environmental, social and economic issues. This course has been structured to increase the breadth and depth of knowledge and application of skills necessary to develop and implement sustainability strategies for a range of sectors.

The flexible nature of the degree provides students with the opportunity to specialise in either Environmental Management or Sustainable Regional Development, whilst pursuing industry-linked research projects that align to their personal interests and careers aspirations.

Industry connectedness is an integral part of this course and ensures students have opportunities to gain an industry perspective and establish professional networks prior to graduation. Guest lectures from key industry partners are embedded into the degree to provide students with an understanding of research and commercialisation in the sustainability context.

Following successful completion of the course, graduates may choose to pursue further research through a PhD, or seek employment in industry or government roles. Alternatively, students may choose to exit early with a Graduate Certificate of Research Management or Graduate Diploma of Sustainability.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

Approximately 150 hours of learning and assessment activities per Deakin credit point.

Students will have access to a range of elective units from a variety of relevant discipline areas across the Faculty and University. This will allow them to tailor a program relevant to their specific interests, subject to academic approval. As a pathway to PhD, the proposed courses have a key component in the form of a research project. The thesis should offer a significant contribution to knowledge in the discipline concerned and demonstrate the student's capacity to carry out independent research.

Students not wishing to pursue further studies in research will have the opportunity to undertake a 4-credit point industry practice placement during their second year of studies, along with 4 course electives that will allow them to complement their studies with a range of relevant options.

## Career opportunities

As a graduate of this course, you will be uniquely positioned to commence a PhD or actively pursue research roles in industry, education, government, NGOs, policy developments and teaching. Depending on your chosen area of expertise, you may choose to seek employment as an ecologist, environment consultant, communications specialist, researcher or science journalist. Potential employers include CSIRO, planning and research officers for state/federal government, government planning and environment departments, environmental protection agencies, cultural and natural heritage management, environmental conservation, land and water management, natural resource management, , private research institutes, private commercial companies, industrial research companies, universities, NGOs, schools, agriculture and food sector, local councils and public service.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

Graduates will be uniquely positioned to commence a PhD.

## Alternative exit

- Graduate Diploma of Sustainability (S621) (Exit option only)
- Graduate Certificate of Research Management (S521)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](https://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Demonstrate mastery and specialist knowledge of natural and social sciences related to sustainability, environmental management and sustainability regional development.</p> <p>Plan and execute a substantial research or industry based project to demonstrate a deep understanding and mastery within the sustainability, environmental management and sustainable regional development disciplines.</p> <p>Demonstrate well-developed judgement and responsibility to review, analyse and develop sustainability strategies based on holistic principles.</p>
Communication	<p>Present a reasoned argument that highlights essential details of sustainability, environmental management and sustainable regional development, theory and application, key observations, results and conclusions of scientific research in a professional manner using appropriate style, language and references including local, national, and international contributions or contexts.</p> <p>Apply listening skills and effective communication skills to accommodate, encourage and answer questions from a range of audience and to defend research/project findings and sustainability implementation propositions.</p> <p>Interpret the boundaries or limits of social and scientific information, data, discuss error, probability, uncertainty, conclusions and arguments to justify theoretical propositions, methodologies, methods, techniques, conclusions and professional decisions.</p>
Digital literacy	<p>Use well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise and disseminate sustainability data, information and literature in the planning and implementation of projects to a range of stakeholders in sustainability, environmental management and sustainable regional development.</p> <p>Reflect on information, data and results and develop strategies for disseminating research outcomes in a digital world.</p>
Critical thinking	<p>Appraise complex social, economic and scientific methodologies and information from a broad range of interdisciplinary sources using critical, analytical and logical reasoning from multiple perspectives for evaluating and providing solutions to sustainability issues that incorporate the holistic principles.</p> <p>Formulate research questions to test and/ or contest ideas, concepts and theoretical propositions through an evidence-based well-structured project.</p>

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	<p>Plan and implement sustainability research investigation by using traditional and emerging techniques and technologies to identify problems and by applying analysis and synthesis skills, and triple-bottom line principles to solve research and/or practical problems.</p> <p>Demonstrate complex problem-solving skills by identifying and creating solutions to real world sustainability through social, economic and/or scientific inquiry.</p> <p>Contribute to advancements in scientific knowledge through mastery in the use of traditional and emerging instruments and techniques to devise an investigation, and in the collection, interpretation, analysis, synthesis and dissemination of issues pertaining to the identification of issues and solutions to improve sustainability in general and/or environmental management and/or sustainable regional development.</p>
Self-management	<p>Take personal, professional and social responsibility within changing national and international professional contexts to develop autonomy as researchers and evaluate own performances.</p> <p>Work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of social frameworks and scientific methodologies to make informed choices based on the triple-bottom line principles.</p>
Teamwork	<p>Work independently and collaboratively with advice from the supervisor towards achieving the outcomes of a project and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in diverse professional, social and cultural contexts.</p>
Global citizenship	<p>Apply principles of sustainability and environmental management knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with the supervisor to articulate the place and importance of social and scientific inquiry in the local and global context.</p>

## Course rules

To complete the Master of Sustainability, students must attain 16 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 16 credit points, you'll need to study 16 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points, which must include the following:

Year 1 (8 credit points):

- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- 2 core units (2 credit points)
- 1 specialisation (advanced disciplinary study area) (4 credit points)
- 2 elective units (2 credit points)

Year 2 (8 credit points):

- Research pathway or Industry Practice pathway (8 credit points)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Specialisations

Refer to the details of each specialisation for availability.

- Sustainable Regional Development
- Environmental Management

## Course structure

### Core

#### Year 1

STP050	Academic Integrity (0 credit points)
SLE761	Research Planning and Communication
SLE763	Research Frontiers Project

Plus 4 credit points from a specialisation (Advanced Disciplinary studies)

Plus two level 7 elective unit

#### Year 2

Chosen from the following pathways:

##### *Research Pathway*

SLE764	Research Thesis 1 (4 credit points)
SLE765	Research Thesis 2 (4 credit points)

OR

##### *Industry Practice Pathway*

SLE766	Industry Practice (4 credit points)^
--------	--------------------------------------

plus four credit points of level 7 units

^ Students undertaking this unit must have successfully completed STP710 Introduction to Work Placements (0 credit point)

## Recommended electives

SLE762	Research Impact and Management
--------	--------------------------------

OR

Any level 7 units chosen from existing units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

## Work experience

Students will have an opportunity to complete an industry practice pathway, equivalent to 4 credit points, in place of a research pathway.

## Details of specialisations

### **Sustainable Regional Development – unit set code – SP-S000082**

*Burwood (Melbourne), Cloud (online)*

#### Overview

Sustainable Regional Development is critical to the economic performance of both developed and developing countries, especially in the face of globalisation, population growth, economic structural adjustments and climate change. Two thirds of Australia's export earnings come from regional industries such as agriculture, tourism, retail, services and manufacturing. As such, demand has risen sharply for professionals with the ability to undertake regional socioeconomic and environmental planning that looks to the long-term competitive advantages of regional areas, and propose appropriate policy responses.

The specialisation is appropriate for developed and developing country contexts, and the second year research project can be focused on international (overseas) regional development situations. Graduates will develop an in-depth understanding of the key biophysical, socioeconomic, geographic and infrastructure factors that influence the development of regions, as well as the strategic and technological tools to analyse and act on information to sustainably guide regional economic development.

#### Units

SLE740	Climate Change Adaptation and Mitigation
SLE741	Regional Development Economics and Planning
SLE742	Systems and Strategic Thinking
SLE743	Regional Development Modelling

### **Environmental Management – unit set code – SP-S000084**

*Burwood (Melbourne), Cloud (online)*

#### Overview

Environmental Management involves a multidisciplinary approach to examining why environmental impacts occur and developing appropriate solutions to managing these impacts. Contemporary approaches require a multifaceted combination of techniques that address environmental, social and economic issues. Balancing resources and employment against environmental impacts requires specialised knowledge and skills, such that environmental managers need to be able to understand government policy direction, legislative compliance issues and analyse risk to the environment, often on a global scale. This specialisation prepares students to address the unique issues and challenges faced in this field.

#### Units

SLE720	Risk Assessment and Control
SLE721	Policy and Planning for Sustainable Development
SLE740	Climate Change Adaptation and Mitigation
SLE725	Environmental Management Systems

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Cyber Security

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Cyber Security
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Waurin Ponds (Geelong)
<i>Duration</i>	Depending on your professional experience and previous qualifications, your course will be: <ul style="list-style-type: none"> <li>• 1 year full time (2 years part time) – 8 credit points</li> <li>• 1.5 years full time (3 years part time) – 12 credit points</li> <li>• 2 years full time (4 years part time) – 16 credit points</li> </ul>
<i>CRICOS course code</i>	093941G
<i>Deakin course code</i>	S734
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

In an increasingly digital world, cyber-attacks are an everyday occurrence. Cyber security professionals are employed to protect organisations from these cyber threats and are in high demand globally. This course can prepare you for a successful career in cyber security anywhere in the world.

Throughout the Master of Cyber Security, you will learn how to detect, analyse and confront cyber security challenges. You will focus on a range of studies, and gain knowledge about system security and digital forensics, analytics, organisational security and human aspects of cyber security.

This course gives you the cyber security skills that are crucial to the success of our digital future. And, once you graduate, you'll have the knowledge and talent to take on an expert security role within business, government or law enforcement.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Career options are varied, you could work anywhere in the world as a:

- security analyst
- project manager
- security system manager
- cryptographer
- consultant
- security system developer or programmer information security auditor
- business continuity or IT security engineer.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

Pathways for students to enter the Master of Cyber Security are as follows:

- Option 1: Graduate Certificate of Information Technology (S578) (followed by a 12 credit point Master of Cyber Security)
- Option 2: Graduate Certificate of Cyber Security (S535) (followed by an 8 credit point Master of Cyber Security)

Pathway options will depend on your professional experience and previous qualifications.

## Alternative exits

S635, S535, S578.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop, evaluate, implement and manage cyber security solutions for complex systems, organisations, platforms communication channels, and data, based on industry-accepted standards and best practice. Design, develop and implement advanced cyber systems and software, and associated policies and procedures for optimal use to withstand emerging attacks/threats in cyber space.
Communication	Communicate effectively in order to design, evaluate and respond to advances in technology, future trends and industry standards and utilise a range of verbal, graphical and written forms, customised for diverse audiences including specialist and non-specialist clients, colleagues and industry personnel.
Digital literacy	Utilise a range of digital technologies and information sources to discover, select, analyse, synthesise, evaluate, critique and disseminate both technical and professional information.
Critical thinking	Appraise complex information using critical and analytical thinking and judgement to identify problems, analyse user requirements and propose appropriate and innovative solutions.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Generate IT security solutions through the application of specialised theoretical constructs, expert skills and critical analysis to real-world, ill-defined problems to develop appropriate and innovative IT solutions.
Self-management	Take personal, professional and social responsibility within changing national and international professional IT contexts to develop autonomy as researchers and evaluate own performance for continuing professional development. Work autonomously and responsibly to create solutions to new situations and actively apply knowledge of theoretical constructs and methodologies to make informed decisions.
Teamwork	Work independently and collaboratively towards achieving the outcomes of a group project, thereby demonstrating interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, manage difficult and awkward conversations, provide constructive feedback, and demonstrate the ability to function effectively in diverse professional, social and cultural contexts.
Global citizenship	Engage in professional and ethical behaviour in the design, development and management of IT systems, in the global context, in collaboration with diverse communities and cultures.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Cyber Security, you will complete 8, 12 or 16 credit points, depending on your prior experience.

The course is structured in three parts:

- Part A. Fundamental Information Technology Studies (4 credit points),
- Part B. Introductory Cyber Security Studies (4 credit points), and
- Part C. Mastery Cyber Security Studies (8 credit points).

Depending upon prior qualifications and/or experience, you may receive credit for Parts A and B.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

Mandatory unit for all entry levels

STP050 Academic Integrity (0 credit points)

### *Part A: Fundamental Information Technology Studies*

SIT771 Object-Oriented Development  
 SIT772 Database and Information Retrieval  
 SIT773 Software Requirements Analysis and Modelling  
 SIT774 Web Technologies and Development

### *Part B: Introductory Cyber Security Studies*

MIS782 Value of Information  
 SIT719 Security and Privacy Issues in Analytics  
 SIT763 Cyber Security Management  
 SIT716 Computer Networks and Security

### *Part C: Mastery Cyber Security Studies*

SIT735	Communications Network Security
SIT703	Advanced Digital Forensics
SIT704	Advanced Topics in Digital Security
SIT740	Research and Development in Information Technology
SIT764	Project Analysis and Design ~
SIT782	Project Delivery ~

~ Note: Students are expected to undertake SIT764 and SIT782 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT764 and SIT782 consecutively.

### **Electives**

Plus two (2) level 7 SIT-coded elective units.

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*International students – Please note that due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in Deakin’s Cloud Campus.*

## Course overview

The Master of Cyber Security (Professional) is designed to extend the specialised cyber security skills obtained in the Master of Cyber Security by providing students with the opportunity to undertake a period of industry-based learning or a research project under the supervision of our internationally-recognised research staff.

The course prepares you for a variety of security roles within business, government and law enforcement by combining technical studies in system security, digital forensics and analytics with organisational security, governance and policy skills.

A serious challenge facing governments and organisations is how to deal with the dramatic increase in the number and severity of cyber attacks which cause great loss to business, government and society. Addressing cyber attacks is integral to a wide variety of organisations and government departments, in the context of technology, law and ethics. Having professionals with cyber security skills is crucial for the ongoing success of our digital future.

The course is ideally suited to those who have completed an undergraduate degree in a similar discipline, in the field of information technology or computing.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Career options are varied, you could work anywhere in the world as a:

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Cyber Security (Professional), students must attain 16 credit points over 2 years of full time study (or part time equivalent). Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points, which must include the following:

- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Ten (10) core units
- Two (2) level 7 SIT-coded elective units
- plus a further 4 credit points from a specified list

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
MIS782	Value of Information
SIT719	Security and Privacy Issues in Analytics
SIT735	Communications Network Security
SIT703	Advanced Digital Forensics
SIT704	Advanced Topics in Digital Security
SIT763	Cyber Security Management
SIT740	Research and Development in Information Technology
SIT764	Project Analysis and Design ~
SIT782	Project Delivery
SIT716	Computer Networks and Security

Plus a further four credit points from the below list:

- SIT790 Major Thesis (4 cp), or
- SIT791 Professional Practice (4 cp)\*, or
- SIT792 Minor Thesis (2 cp), and 2 additional credit points of level 7 SIT elective units

\* must have successfully completed STP710 Introduction to Work Placements (0 credit point unit)

~ Note: Students are expected to undertake SIT764 and SIT782 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT764 and SIT782 consecutively.

### Electives

Two additional level 7 SIT-coded elective units.

### Work experience

You will have an opportunity to undertake a discipline-specific internship placement as part of your course. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Applied Artificial Intelligence

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Applied Artificial Intelligence
<i>Campus</i>	Offered at Waurin Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	Depending on your professional experience and previous qualifications, your course will be: <ul style="list-style-type: none"> <li>• 1 year full time (2 years part time) – 8 credit points</li> <li>• 1.5 years full time (3 years part time) – 12 credit points</li> <li>• 2 years full time (4 years part time) – 16 credit points</li> </ul>
<i>CRICOS course code</i>	0100305
<i>Deakin course code</i>	S736
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9

*New course commencing Trimester 1 2020*

## Course overview

Artificial intelligence is driving digital disruption, with new technology helping redefine many industries. Many companies are looking to take advantage of recent advances in artificial intelligence, which is creating a large demand for skilled professionals.

Deakin's suite of courses in Applied Artificial Intelligence will equip you with specialist knowledge and skills necessary to design and develop advanced solutions using artificial intelligence.

The Master of Applied Artificial Intelligence will develop your understanding of the state of the art in artificial intelligence, deep learning, reinforcement learning, and the application of these algorithms in computer vision and speech processing. You will explore the complexities of introducing AI solutions in a human context, both from a conceptual and ethical perspective as well as from an engineering perspective.

As an artificial intelligence specialist, you will work alongside software engineers, data scientists, application developers and business analysts, applying your specialist knowledge to ensure artificial intelligence is appropriately integrated into software solutions from a technical and human perspective.

You will gain hands-on experience in the development of software solutions and the use and development of artificial intelligence. Our world-leading research in artificial intelligence feed directly into our classrooms, meaning that you'll be learning at the cutting edge of industry expectations and capabilities.

As a graduate you will be well-equipped to work on design, development, and operation of software solutions involving artificial intelligence.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates will have the specialist knowledge needed to operate as Data Scientists, AI Technology Software Engineers, AI Product Managers, AI Ethicist and grow into roles such as AI Architect.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternative exits

S636, S536, S578.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Develop an advanced and integrated knowledge of the technologies of artificial intelligence, including deep learning and reinforcement learning, with detailed knowledge of the application of AI algorithms across a range of domains and applications including computer vision and speech processing.</p> <p>Design, develop and implement software solutions that incorporate novel applications of artificial intelligence.</p> <p>Apply advanced knowledge of artificial intelligence to the research and evaluation of AI solutions and provision of specialist advice.</p> <p>Design artificial intelligence solutions that incorporate safe ethical decision making.</p>
Communication	<p>Prepare a range of technical and user-oriented documentation using adequate structure, terminology and context to address technical and non-technical audiences.</p> <p>Convey information and instructions in a clear, concise and coherent manner using appropriate oral communication techniques and skills for a broad range of audiences.</p> <p>Imagine, conceive, and represent ideas using IT conventions, modelling languages, and standards to reflect on complex artificial intelligence ideas and processes in an effective manner.</p> <p>Apply interpersonal skills to lead, proactively assist, contribute to ideas, respect opinions and value contribution made by others when working collaboratively with a wide range of stakeholders.</p>

Deakin graduate learning outcomes	Course learning outcomes
Digital literacy	<p>Identify, select and use a range of digital technologies and tools to generate, manage and share digital resources associated with advanced artificial intelligence concepts and solutions.</p> <p>Independently and systematically locate information, evaluate its reliability, and use the information for design, problem solving and research purposes.</p> <p>Recommend and use appropriate practices and processes to ensure the security, integrity, safety and availability of digital resources.</p>
Critical thinking	<p>In assessing complex artificial intelligence scenarios, critically evaluate arguments, hypothesis, systems and proposals to identify basic statements.</p> <p>In assessing complex artificial intelligence scenarios, locate ambiguity and vagueness in arguments, requirements, and proposals to determine if ideas are reasonable, and identify information that may be contradictory, omitted, or not collected.</p> <p>In assessing complex artificial intelligence scenarios, apply judgement in evaluating ideas, associated reasoning, and available evidence to arrive at conclusions that are valid.</p>
Problem solving	<p>Apply expert, specialised technical skills, knowledge and techniques to identify and define complex problems utilising advanced artificial intelligence in a variety of contexts.</p> <p>Apply expert, specialised technical skills and knowledge in modelling methods and processes to understand problems, handle abstraction and design novel artificial intelligence solutions.</p> <p>Apply expert, specialised technical skills and knowledge to develop innovative and creative approaches and/or solutions in planning, designing, managing, evaluating and executing complex artificial intelligence projects.</p> <p>Integrate knowledge of social, safety, legal and cultural aspects to solve problems in complex and contradictory situations.</p>
Self-management	<p>Evaluate own knowledge and skills with relation to wider artificial intelligence community and use frameworks of reflection to define and progress professional goals.</p> <p>Recognise the need, and engage in, independent learning for continual development of specialist knowledge and skills in artificial intelligence as a computing professional.</p> <p>Demonstrate the ability to accept responsibility for objectives, and work under broad direction, engaging in the feedback process independently to ensure outcomes are achieved.</p>

Deakin graduate learning outcomes	Course learning outcomes
Teamwork	<p>Contribute specialist knowledge and skills of artificial intelligence when working within a team, demonstrating high levels of responsibility and accountability.</p> <p>Engage consistently and professionally in groupware to contribute expert knowledge and skills of artificial intelligence to achieve shared team objectives and outcomes.</p> <p>Apply strategies to lead and support positive group dynamics, manage conflict and to function effectively as a team member.</p>
Global citizenship	<p>Apply professional ethics, responsibilities, and norms of professional computing practice.</p> <p>Demonstrate awareness of regulation and ethical implications of acquisition, use, disclosure and eventual disposal of information.</p> <p>Engage with global trends and research with concern for societal, health, safety, legal, and cultural issues to effectively manage responsibilities relevant to artificial intelligence in practice.</p>

Approved by Faculty Board 14 March 2019

## Course rules

To complete the Master of Applied Artificial Intelligence, you will complete 8, 12 or 16 credit points, depending on your prior experience.

The course is structured in three parts:

- Part A. Fundamental Information Technology Studies (4 credit points),
- Part B. Introductory Artificial Intelligence Studies (4 credit points), and
- Part C. Mastery Applied Artificial Intelligence Studies (8 credit points).

Depending upon prior qualifications and/or experience, you may receive credit for Parts A and B.

The course comprises a total of 16 credit points, which must include the following:

- 14 credit points of core units
- 2 credit points of Level 7 SIT elective units
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

Mandatory unit for all entry levels

STP050 Academic Integrity (0 credit points)

### *Part A: Fundamental Information Technology Studies*

SIT771 Object-Oriented Development  
 SIT772 Database and Information Retrieval  
 SIT773 Software Requirements Analysis and Modelling  
 SIT774 Web Technologies and Development

### *Part B: Introductory Artificial Intelligence Studies*

SIT720	Machine Learning
SIT787	Mathematics for Artificial Intelligence
SIT719	Security and Privacy Issues in Analytics

Plus one elective unit

### *Part C: Mastery Applied Artificial Intelligence Studies*

SIT744	Practical Machine Learning for Data Science
SIT796	Reinforcement Learning ^
SIT799	Human Aligned Artificial Intelligence
SIT789	Applications of Computer Vision and Speech Processing
SIT788	Engineering AI Solutions
SIT764	Project Analysis and Design ~
SIT782	Project Delivery ~

Plus one elective

~ Note: Students are expected to undertake SIT764 and SIT782 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT764 and SIT782 consecutively.

^ Available from 2021

### **Elective**

Plus two (2) level 7 SIT-coded elective units.

### **Work experience**

You will have an opportunity to undertake a placement as part of your course.

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### **Other learning experiences**

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

# Master of Applied Artificial Intelligence (Professional)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Applied Artificial Intelligence (Professional)
<i>Campus</i>	Offered at Waurin Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	0100306
<i>Deakin course code</i>	S737
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*New course commencing Trimester 1 2020*

## Course overview

Artificial intelligence is driving digital disruption, with new technology helping redefine many industries. Many companies are looking to take advantage of recent advances in artificial intelligence, which is creating a large demand for skilled professionals.

Deakin's suite of courses in Applied Artificial Intelligence will equip you with specialist knowledge and skills necessary to design and develop advanced solutions using artificial intelligence. The Master of Applied Artificial Intelligence (Professional) extends the Master of Applied Artificial Intelligence by providing students with the opportunity to further broaden their knowledge through wider studies in IT, or by undertake a trimester of industry-based learning or a trimester long research project under the supervision of our internationally-recognised research staff.

As an artificial intelligence specialist, you will work alongside software engineers, data scientists, application developers and business analysts, applying your specialist knowledge to ensure artificial intelligence is appropriately integrated into software solutions from a technical and human perspective.

You will gain hands-on experience in the development of software solutions and the use and development of artificial intelligence. Our world-leading research in artificial intelligence feed directly into our classrooms, meaning that you'll be learning at the cutting edge of industry expectations and capabilities.

As a graduate you will be well-equipped to work on design, development, and operation of software solutions involving artificial intelligence.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates will have the specialist knowledge needed to operate as Data Scientists, AI Technology Software Engineers, AI Product Managers, AI Ethicist and grow into roles such as AI Architect.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternative exits

S636, S536, S736.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Develop an advanced and integrated knowledge of the technologies of artificial intelligence, including deep learning and reinforcement learning, with detailed knowledge of the application of AI algorithms across a range of domains and applications including computer vision and speech processing.</p> <p>Design, develop and implement software solutions that incorporate novel applications of artificial intelligence.</p> <p>Apply advanced knowledge of artificial intelligence to the research and evaluation of AI solutions and provision of specialist advice.</p> <p>Design artificial intelligence solutions that incorporate safe ethical decision making.</p> <p>Have a broad appreciation of advanced topics within the IT domain through engagement with research or specialist studies.</p>
Communication	<p>Prepare a range of technical and user-oriented documentation using adequate structure, terminology and context to address technical and non-technical audiences.</p> <p>Convey information and instructions in a clear, concise and coherent manner using appropriate oral communication techniques and skills for a broad range of audiences.</p> <p>Imagine, conceive, and represent ideas using IT conventions, modelling languages, and standards to reflect on complex artificial intelligence ideas and processes in an effective manner.</p> <p>Apply interpersonal skills to lead, proactively assist, contribute to ideas, respect opinions and value contribution made by others when working collaboratively with a wide range of stakeholders.</p>

Approved by Faculty Board 14 March 2019

## Course rules

To complete the Master of Applied Artificial Intelligence (Professional), students must attain 16 credit points.

The course comprises a total of 16 credit points, which must include the following:

- 10 credit points of core units
- 2 credit points of Level 7 SIT elective units
- 4 credit points from one of:
  - Major Thesis
  - Professional Practice
  - Research and Development in IT, and 3 credit points of level 7 coded SIT electives
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)

## Course structure

### Core

Mandatory unit for all entry levels

STP050 Academic Integrity (0 credit points)

### *Part A: Introductory Artificial Intelligence Studies*

SIT720 Machine Learning  
 SIT787 Mathematics for Artificial Intelligence  
 SIT719 Security and Privacy Issues in Analytics

plus one elective unit

### *Part B: Mastery Artificial Intelligence Studies*

SIT744 Practical Machine Learning for Data Science  
 SIT796 Reinforcement Learning ^  
 SIT799 Human Aligned Artificial Intelligence  
 SIT789 Applications of Computer Vision and Speech Processing  
 SIT788 Engineering AI Solutions  
 SIT764 Project Analysis and Design ~  
 SIT782 Project Delivery ~

plus one elective unit

### *Part C: Professional Studies*

Plus a further four credit points from the below list:

- SIT791 Professional Practice (4 credit points)\* or
- SIT790 Major Thesis (4 credit points) or
- SIT740 Research and Development in Information Technology and

3 credit points of level 7 coded SIT electives

\* Students undertaking this unit must have successfully completed STP710 Career Tools for Employability (0-credit-point unit)

~ Note: Students are expected to undertake SIT764 and SIT782 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT764 and SIT782 consecutively.

^ Available from 2021

### **Elective**

Plus two (2) level 7 SIT-coded elective units.

### **Work experience**

You will have an opportunity to undertake a placement as part of your course.

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### **Other learning experiences**

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

# Master of Engineering

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Engineering
<i>Campus</i>	Waurm Ponds (Geelong) – For students who commenced prior to 2017
<i>Cloud Campus</i>	No
<i>Duration</i>	1 year full-time or part-time equivalent
<i>Deakin course code</i>	S750

*The final intake to this course version was in 2016. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin University's postgraduate Engineering program has been designed to strengthen, build on and extend your understanding of the engineering principles required to build successful engineering careers in Australia and overseas.

As a student, you will gain technical skills, a positive approach to problem solving and the ability to work in a team, enabling you to work on complex projects immediately.

You can choose from specialisms in Engineering Management, Mechanical Engineering Design, Electronics Engineering or Electrical and Renewable Energy Engineering. The specialisms all provide expertise in areas of high demand for graduates.

The Master of Engineering can be undertaken as a stand-alone or exit qualification from the Master of Engineering (Professional) program.

Units in the course may include assessment hurdle requirements.

## Career opportunities

With strong demand for professional engineers continuing to increase, engineering graduates can be selective about the location and type of employer they want to work for. Employers are looking for graduates who are fully equipped with advanced engineering skills and capable of starting work projects immediately. Graduates of this course may find career opportunities in a wide range of industries associated with their study area producing job-ready graduates that industry is looking for.

## Alternative exits

S550.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes	Minimum Standards
Discipline-specific knowledge and capabilities: appropriate to the level of study related to a discipline or profession.	<p>Apply specialised, integrated and practical knowledge of engineering principles in the design and analysis of systems and/or processes.</p> <p>Apply advanced and specialised knowledge of contextual factors that impact on engineering including:</p> <ul style="list-style-type: none"> <li>• Innovation</li> <li>• Sustainability</li> <li>• Leadership</li> <li>• Project management.</li> </ul>	<p>Demonstrate specialised functioning engineering knowledge by integrating principles, procedures and practice in the design and analysis of systems and/or processes.</p> <p>Autonomously apply specialised knowledge of various contextual factors to demonstrate the ability to innovate, sustain, lead and manage engineering projects.</p>
Communication: using oral, written and interpersonal communication to inform, motivate and effect change.	Communicate effectively and professionally in a range of contexts using oral, written, graphical and interpersonal communication to professional, non-professional audiences.	Engage, inform and motivate a range of professional and non-professional audience in discussion, negotiation and exchange of ideas, tasks, specifications and results, using professionally appropriate communication methods.
Digital literacy: using technologies to find, use and disseminate information.	<p>Locate, select, analyse, apply, evaluate, and disseminate both technical and non-technical information utilising a range of digital technologies and information sources.</p> <p>Use specialised engineering tools and technologies to communicate ideas, concepts, and designs.</p>	<p>Autonomously locate and select information and resources, and use expert judgement to responsibly analyse, evaluate and disseminate information from a range of information sources using a range of digital technologies.</p> <p>Consistently use specialised engineering tools and technologies to clearly communicate ideas, concepts and designs and provide objective feedback on other's ideas.</p>

Deakin graduate learning outcomes	Course learning outcomes	Minimum Standards
<p>Critical thinking: evaluating information using critical and analytical thinking and judgment.</p>	<p>Apply critical and analytical thinking and judgment to complete engineering projects through design-based learning activities.</p> <p>Reflect critically on the theory and professional practice or scholarship of Engineering.</p>	<p>Use analytical and critical thinking, identify logical flaws and provide reasoning and evidence when independently designing and implementing engineering projects to completion.</p> <p>Explain, evaluate, analyse and judge engineering knowledge and practice by reflecting, researching and interpreting information from a range of perspectives to demonstrate autonomy, expert judgement and responsibility as an engineer.</p>
<p>Problem solving: creating solutions to authentic (real world and ill-defined) problems.</p>	<p>Apply design-based methodologies and creative and innovative approaches to solve problems in the context of research-based or professional engineering projects.</p>	<p>Design, implement, analyse, synthesise and present creative and innovative solutions to complex engineering problems using an evidence-based approach to professional engineering practice.</p>
<p>Self-management: working and learning independently, and taking responsibility for personal actions.</p>	<p>Demonstrate self-management through professional and ethical conduct, and apply the principles of lifelong learning to new challenges.</p>	<p>Manage self, tasks and projects using initiative and professional judgement and engage in ethical professional conduct.</p> <p>Use creativity and autonomy to plan and execute engineering projects.</p> <p>Think on their feet, think retrospectively and reflect on challenges and outcomes for planning future projects</p>

Deakin graduate learning outcomes	Course learning outcomes	Minimum Standards
Teamwork: working and learning with others from different disciplines and backgrounds.	Work effectively in teams and demonstrate team leadership in a collaborative learning environment with others from different disciplines and backgrounds.	<p>Working collaboratively as a team by contributing to the development and success of other team members.</p> <p>Resolve any teamwork issues and assume various team roles (including a leadership role) to demonstrate responsibility and accountability as a team member</p> <p>Apply professional judgement to provide constructive feedback and to communicate ideas, concepts, results and findings clearly by using evidence that substantiates claims.</p>
Global citizenship: engaging ethically and productively in the professional context and with diverse communities and cultures in a global context.	Manage technical, economic, social and ethical aspects of global engineering problems and projects in sustainable and culturally sensitive ways.	<p>Provide engineering solutions to global problems by being culturally aware and sensitive to the needs of the society.</p> <p>Apply ethical engineering perspectives to state or object professional position in order to manage technical, economic, social problems.</p>

Approved by Faculty Board 14 July 2016

## Course rules

To complete the Master of Engineering, students must attain 8 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 8 credit points, you'll need to study 8 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

To be awarded the degree of Master of Engineering, a student must successfully complete units with a total value of 8 credit points, as detailed below.

## Specialisations

Refer to the details of each specialisation for availability.

- Engineering Management
- Mechanical Engineering Design
- Electronics Engineering
- Electrical and Renewable Energy Engineering

## Details of specialisations

### **Engineering Management – unit set code – SP-S000077**

*Waurm Ponds (Geelong)*

#### Overview

Industry expects professional engineers to lead, develop and manage products throughout their life cycle. The expectations later grow towards marketing, servicing and supporting the product, while ensuring its sustainability. This specialisation has been developed to equip students with the skills employers are looking for by combining engineering project management with engineering leadership. Graduates will have the expertise necessary to devise flexible, real solutions for the challenges faced by today's engineering leaders.

#### Units

SEB723     Engineering Project Management  
SEB724     Engineering Leadership

### **Mechanical Engineering Design – unit set code – SP-S000049**

*Waurm Ponds (Geelong)*

#### Overview

Product development and innovation are key drivers for Australian industry. To meet this demand, this specialisation brings together studies in leading computer-aided engineering technologies, and advanced materials and manufacturing, while drawing on Deakin's world-class research teams in a practical and applied approach. You will acquire a solid understanding of product and process modelling and designing for sustainability.

#### Units

SEM711     Product Development Technologies  
SEM712     CAE and Finite Element Analysis  
SEM721     Product Development  
SEM722     Advanced Manufacturing Technology

### **Electronics Engineering – unit set code – SP-S000051**

*Waurm Ponds (Geelong)*

#### Overview

This specialisation allows students to enhance the skills acquired through their undergraduate degree and specialise in technological areas associated with electronics. Students will have opportunities to explore interests in power systems, instrumentation and process control; sensor networks; and embedded systems.

#### Units

SEE701     Control Systems Engineering  
SEE711     Sensor Networks  
SEE710     Instrumentation and Process Control  
SEE712     Embedded Systems

### **Electrical and Renewable Energy Engineering – unit set code – SP-S000076**

*Cloud (online), Waurm Ponds (Geelong)*

#### Overview

This specialisation provides unique technical, research and practical learning experiences to prepare graduates for professional and leadership roles in contemporary power system environments. Students will have access to industry-standard tools and world-class facilities, as well as opportunities to engage with internationally recognised teaching and research staff who have extensive experience in electrical and renewable energy.

#### Units

SEE705     Energy Efficiency and Demand Management  
SEE716     Electrical Systems Protection  
SEE717     Smart Grid Systems  
SEE718     Renewable Energy Systems

# Master of Engineering (Professional)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Engineering (Professional)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurin Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	052600A
<i>Deakin course code</i>	S751
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Study the Master of Engineering (Professional) and you'll develop technical skills, a positive approach to problem solving and the ability to work as part of a team, while focusing on practical experience and a supervised research or industry project that provides you with the advanced project management skills required to tackle complex, industry-focused problems head on.

Throughout the degree you will acquire advanced engineering skills and the forward-thinking, innovative and entrepreneurial skills employers are looking for, while strengthening and extending your understanding of engineering through the pursuit of specialised study in either Additive Manufacturing, Civil Engineering, Engineering Management, Mechanical Engineering Design, Mechatronics and Control Engineering or Electrical and Renewable Energy Engineering – the choice is yours. You will have world-class facilities and equipment at your fingertips with access to the Centre for Advanced Design in Engineering Training (CADET) and the Geelong Technology Precinct (GTP) – home to the Institute for Frontier Materials (IFM), Centre for Intelligent Systems Research (CISR), CSIRO Materials Science and Engineering and the Australian Future Fibre Research and Innovation Centre.

Deakin's Master of Engineering (Professional) partners with industry to provide you with practical work experience opportunities, the capacity to apply your skills to real-world problems and the opportunity to form professional networks prior to graduation.

Engineering offers an exciting future for your working life, with a huge demand for engineering graduates in Australia and internationally. Skilled engineers are needed across all sectors, opening up excellent career opportunities around the world.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

With strong demand for professional engineers continuing to increase, engineering graduates can be selective about the location and type of employer they want to work for. Employers are looking for graduates who are fully equipped with advanced engineering skills and capable of starting work projects immediately. Graduates of this course may find career opportunities in a wide range of industries associated with their study area producing job-ready graduates that industry is looking for.

## Participation requirements

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

Students commencing in Trimester 3 will be required to complete units in Trimester 3.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternative exits

S550.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply specialised, integrated and practical knowledge of engineering principles in the design and analysis of systems and/or processes. Apply advanced and specialised knowledge of contextual factors that impact on engineering including Innovation, Sustainability, Leadership and Project management. Apply advanced and in-depth knowledge of current research directions and methodologies within an engineering specialisation.
Communication	Communicate effectively and professionally in a range of contexts using oral, written, graphical and interpersonal communication to professional, non-professional audiences.
Digital literacy	Locate, select, analyse, apply, evaluate, and disseminate both technical and non-technical information utilising a range of digital technologies and information sources. Use specialised engineering tools and technologies to communicate ideas, concepts, and designs.
Critical thinking	Apply critical and analytical thinking and judgment to complete engineering projects through design-based learning activities. Reflect critically on the theory and professional practice or scholarship of Engineering.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Apply design-based methodologies and creative and innovative approaches to solve problems in the context of research-based or professional engineering projects.
Self-management	Demonstrate self-management through professional and ethical conduct, and apply the principles of lifelong learning to new challenges.
Teamwork	Work effectively in teams and demonstrate team leadership in a collaborative learning environment with others from different disciplines and backgrounds.
Global citizenship	Manage technical, economic, social and ethical aspects of global engineering problems and projects in sustainable and culturally sensitive ways.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Engineering (Professional), students must attain 16 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 16 credit points, you'll need to study 16 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points, which must include the following:

- 4 core units (totalling 4 credit points)
- Completion of STP710 Introduction to Work Placement (0-credit-point compulsory unit)
- Completion of SEE700 Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- One 8-credit point specialisation from the list below. You will be required to complete at least one specialised study as part of this course.
- 4 elective units (totalling 4 credit points)(you can choose which ones to study)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Specialisations

Refer to the details of each specialisation for availability.

- Additive Manufacturing
- Civil Engineering (commencing Trimester 2, 2019)
- Engineering Management
- Electrical and Renewable Energy Engineering
- Mechanical Engineering Design
- Mechatronics and Control Engineering

For students pursuing a second Engineering specialisation, you will only be required to complete the four credit points of discipline specific units (excluding project units) within the second specialisation requirements.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
STP710	Introduction to Work Placements (0 credit points)
SEE700	Safety Induction Program (0 credit points)
SEB711	Managing and Developing Innovation
SEB725	Engineering Entrepreneurship
SET721	Engineering Sustainability
SEN700	Research Methodology

plus an eight (8) credit point specialisation

plus four elective units at level 7 (across the University)

### Electives

Select from a range of elective units offered across many courses. In some cases you may even be able to choose elective units from a completely different discipline area (subject to meeting unit requirements).

## Work experience

You may have the opportunity to complete an engineering internship of 120-160 hours (typically as a 4-6 week unpaid placement or as a 12 week unpaid placement) in an Engineering-related position.

## Details of specialisations

### **Additive Manufacturing – unit set code – SP-S000085**

*Waurm Ponds (Geelong)*

#### Overview

In recent years there has been an increasing amount of interest in Additive Manufacturing (AM), sometimes referred to as 3D Printing. Whilst many engineers have a basic understanding of entry-level AM, there are fewer opportunities to learn about industrial-scale technologies like metal prototyping and multiple-material systems. This specialisation aims to equip engineers with the knowledge and skills necessary to use AM technologies at an advanced level to solve complex industrial design and manufacturing problems.

#### Units

SEM721	Product Development
SEM723	Additive Manufacturing Processes and Applications
SEM724	Design for Additive Manufacturing
SEM725	Materials for Additive Manufacturing
SEN719	Project Initiation (2 credit points)#
SEN720	Project Implementation and Evaluation (2 credit points)

# Must have successfully completed STP710 Introduction to Work Placements (0 credit-point compulsory unit)

### **Engineering Management – unit set code – SP-S000077**

*Waurm Ponds (Geelong)*

#### Overview

Industry expects professional engineers to lead, develop and manage products throughout their life cycle. The expectations later grow towards marketing, servicing and supporting the product, while ensuring its sustainability. This specialisation has been developed to equip students with the skills employers are looking for by combining engineering project management with engineering leadership. Graduates will have the expertise necessary to devise flexible, real solutions for the challenges faced by today's engineering leaders.

## Units

SEB723	Engineering Project Management (2 credit points)
SEB724	Engineering Leadership (2 credit points)
SEN730	Engineering Management Case Study (2 credit points)#
SEN731	Engineering Management Project (2 credit points)

# Must have successfully completed STP710 Introduction to Work Placements (0 credit-point compulsory unit)

### **Civil Engineering – unit set code – SP-S000086**

(New from Trimester 2, 2019)

*Waurm Ponds (Geelong)*

#### Overview

The civil engineering specialisation focuses on the theme of infrastructure engineering and provides students with advanced knowledge in four major sub disciplines of civil engineering, namely, structural engineering, geotechnical engineering, transportation systems, and water management.

## Units

SEN769	Advanced Structural Design *
SEN725	Urban Stormwater Management
SEN727	Advanced Geomechanics *
SEN728	Transportation Infrastructure Systems
SEN719	Project Initiation (2 credit points)#
SEN720	Project Implementation and Evaluation (2 credit points)

# Must have successfully completed STP710 Introduction to Work Placements (0 credit-point compulsory unit)

\* available from 2020

### **Mechanical Engineering Design – unit set code – SP-S000049**

*Waurm Ponds (Geelong)*

#### Overview

Product development and innovation are key drivers for Australian industry. To meet this demand, this specialisation brings together studies in leading computer-aided engineering technologies, and advanced materials and manufacturing, while drawing on Deakin's world-class research teams in a practical and applied approach. You will acquire a solid understanding of product and process modelling and designing for sustainability.

## Units

SEM711	Product Development Technologies
SEM712	CAE and Finite Element Analysis
SEM721	Product Development
SEM722	Advanced Manufacturing Technology
SEN719	Project Initiation (2 credit points)#
SEN720	Project Implementation and Evaluation (2 credit points)

# Must have successfully completed STP710 Introduction to Work Placements (0 credit-point compulsory unit)

### **Mechatronics and Control Engineering – unit set code – SP-S000051**

*Waurm Ponds (Geelong)*

#### Overview

This specialisation allows students to enhance the skills acquired through their undergraduate degree and specialise in technological areas associated with electronics. Students will have opportunities to explore interests in power systems, instrumentation and process control; sensor networks; and embedded systems.

## Units

SEE701	Control Systems Engineering
SEE711	Sensor Networks
SEE710	Instrumentation and Process Control
SEE712	Embedded Systems
SEN719	Project Initiation (2 credit points)#
SEN720	Project Implementation and Evaluation (2 credit points)

# Must have successfully completed STP710 Introduction to Work Placements (0 credit-point compulsory unit)

## **Electrical and Renewable Energy Engineering – unit set code – SP-S000076**

### *Waurn Ponds (Geelong)*

#### Overview

This specialisation provides unique technical, research and practical learning experiences to prepare graduates for professional and leadership roles in contemporary power system environments.

Students will have access to industry-standard tools and world-class facilities, as well as opportunities to engage with internationally recognised teaching and research staff who have extensive experience in electrical and renewable energy.

#### Units

SEE705	Energy Efficiency and Demand Management
SEE716	Electrical Systems Protection
SEE717	Smart Grid Systems
SEE718	Renewable Energy Systems
SEN719	Project Initiation (2 credit points)#
SEN720	Project Implementation and Evaluation (2 credit points)

# Must have successfully completed STP710 Introduction to Work Placements (0 credit-point compulsory unit)

#### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

#### Other learning experiences

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

# Master of Engineering

<i>Year</i>	2019 Course Information
<i>Award granted</i>	Master of Engineering
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurm Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>Deakin course code</i>	S752
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*New course commencing Trimester 2, 2019*

## Course overview

Study the Master of Engineering and you will develop technical skills, a positive approach to problem solving and the ability to work as part of a team, while focusing on practical experience and a supervised research or industry project that provides you with the advanced project management skills required to tackle complex, industry-focused problems head on.

Throughout the degree you will acquire advanced engineering skills and the forward-thinking, innovative and entrepreneurial skills employers are looking for, while strengthening and extending your understanding of engineering through the pursuit of specialised study in either Civil Engineering, Mechanical Engineering Design, Mechatronics Engineering or Electrical and Renewable Energy Engineering – the choice is yours.

You will have world-class facilities and equipment at your fingertips with access to the Centre for Advanced Design in Engineering Training (CADET) and the Geelong Technology Precinct (GTP) – home to the Institute for Frontier Materials (IFM), the Institute of Intelligent Systems Research and Innovation (IISRI), CSIRO Materials Science and Engineering and the Australian Future Fibre Research and Innovation Centre.

Engineering offers an exciting future for your working life, with a huge demand for engineering graduates in Australia and internationally. Skilled engineers are needed across all sectors, opening up excellent career opportunities around the world.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates of this course may find career opportunities in a wide range of engineering industries associated with their specialisation. With strong demand for professional engineers continuing to increase, engineering graduates can be selective about the location and type of employer they want to work for. Employers are looking for graduates who are fully equipped with advanced engineering skills and capable of starting work projects immediately.

## Participation requirements

Students commencing in Trimester 3 will be required to complete units in Trimester 3.

Through SEP499 Professional Engineering Practice, you'll gain industry experience by completing at least 60 days (12 full time weeks) of practical work experience in an engineering workplace, developing and enhancing your understanding of the engineering profession, possible career outcomes, and the opportunity to establish valuable professional networks. While students are encouraged to find placements themselves, the School and Faculty has a WIL team that can provide dedicated support and opportunities to students.

Placement can occur at any time, including during the standard holiday breaks listed here: [deakin.edu.au/courses/key-dates](http://deakin.edu.au/courses/key-dates).

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternative exits

S652.

## Equipment requirements

Students must have access to a suitable computer and a network connection. Information about the hardware and software requirements may be obtained from the School of Engineering, telephone 03 9244 6699.

## Articulation and credit transfer

Flexible entry into the course allows students to upgrade their qualifications and to obtain credit for previous studies/experience. Applicants with appropriate qualifications or experience may apply for Recognition of Prior Learning.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Judiciously apply knowledge of engineering principles, techniques and, project management skills to systematically investigate, interpret and analyse complex problems and issues, to ensure that technical and non-technical considerations including costs, risk and limitations are properly evaluated and integrated as desirable outcomes of engineering projects and practice.</p> <p>Take responsibility for engineering solutions, projects and programs, and ensure reliable functioning of all materials, components, sub-systems and technologies as well as all interactions between the technical system and the context within which it functions to form a complete, sustainable and self-consistent system that optimises social, environmental and economic outcomes over its full lifetime.</p> <p>Respond to or initiate research concerned with advancing engineering and developing new principles and technologies within the specialist engineering discipline to find and generate information, using appropriate methodology and thereby contribute to continual improvement in the practice and scholarship of engineering.</p>
Communication	<p>Prepare high quality engineering documents and present information including approaches, procedures, concepts, solutions, and technical details in oral, written and/or visual forms appropriate to the context, in a professional manner.</p> <p>Use reasoning skills to critically and fairly analyse the viewpoints of stakeholders and specialists, and consult in a professional manner when presenting an engineering viewpoint, arguments, justifications or solutions to engage technical and non-technical audience in discussions, debate and negotiations.</p>
Digital literacy	<p>Use a wide range of digital engineering and scientific tools and techniques to analyse, simulate, visualise, synthesise and critically assess information and methodically and systematically differentiate between assertion, personal opinion and evidence for engineering decision-making.</p> <p>Demonstrate the ability to independently and systematically locate and share information, standards and regulations that pertain to the specialist engineering discipline.</p>
Critical thinking	<p>Identify, discern, and characterise salient issues, determine and analyse causes and effects, justify and apply appropriate assumptions, predict performance and behaviour, conceptualise engineering approaches and evaluate potential outcomes against appropriate criteria to synthesise solution strategies for complex engineering problems.</p>

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	<p>Use research-based knowledge and research methods to identify, reveal and define complex engineering problems which involve uncertainty, ambiguity, imprecise information, conflicting technical or nontechnical factors and safety and other contextual risks associated with engineering application within an engineering discipline.</p> <p>Apply technical knowledge, problem solving skills, appropriate tools and resources to design components, elements, systems, plant, facilities, processes and services to satisfy user requirements taking in to account broad contextual constraints such as social, cultural, economic, environmental, legal, political and human factors as an integral factor in the process of developing responsible engineering solutions.</p> <p>Identify recent developments, develop alternative concepts, solutions and procedures, appropriately challenge engineering practice from technical and non-technical viewpoints and thereby demonstrate capacity for creating new technological opportunities, approaches and solutions.</p>
Self-management	<p>Regularly undertake self-review and take notice of feedback to reflect on achievements, plan professional development needs, learn from the knowledge and standards of a professional and intellectual community and contribute to its maintenance and advancement.</p> <p>Commit to and uphold codes of ethics, established norms, standards, and conduct that characterises accountability and responsibility as a professional engineer, while ensuring safety of other people and protection of the environment.</p>
Teamwork	<p>Function effectively as a team member, take various team roles, consistently complete all assigned tasks within agreed deadlines, proactively assist, contribute to ideas, respect opinions and value contribution made by others when working collaboratively in learning activities to realise shared team objectives and outcomes.</p> <p>Apply people and personal skills to resolve any teamwork issues, provide constructive feedback that recognises the value of alternative and diverse viewpoints, and contribute to team cohesiveness, bringing to the fore and discussing shared individual and collective knowledge and creative capacity to develop optimal solutions to complex engineering problems.</p>
Global citizenship	<p>Demonstrate an advanced understanding of the global, cultural and social diversity and complex needs of communities and cultures through the assessment of qualitative and quantitative interactions between engineering practices, the environment and the community, the implications of the law, relevant codes, regulations and standards.</p> <p>Actively seek traditional, current and new information to assess trends and emerging practice from local, national and global sources and appraise the diversity, equity and ethical implications for professional practice.</p>

Approved by Faculty Board 6 September 2018

## Course rules

To complete the Master of Engineering, students must attain 16 credit points. Most units (think of units as 'subjects') are equal to 1 or 2 credit point, sometimes abbreviated as 'cps'. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points, which must include the following:

- 7 core units (totalling 9 credit points)
- Completion of STP710 Introduction to Work Placement (0-credit-point compulsory unit)
- Completion of SEE700 Safety Induction Program (0-credit-point compulsory unit)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- One 6-credit point specialisation from the list below. You will be required to complete at least one specialised study as part of this course.
- 1 level 7 elective unit (totalling 1 credit point)(you can choose which ones to study)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Specialisations

Refer to the details of each specialisation for availability.

- Civil Engineering (commencing Trimester 2, 2019)
- Electrical and Renewable Energy Engineering
- Mechanical Engineering Design
- Mechatronics Engineering

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
STP710	Introduction to Work Placements (0 credit points)
SEE700	Safety Induction Program (0 credit points)
SEB711	Managing and Developing Innovation
SEB725	Engineering Entrepreneurship
SET721	Engineering Sustainability
SEN700	Research Methodology
SEN719	Project Initiation (2 credit points)#
SEN720	Project Implementation and Evaluation (2 credit points)
SEP499	Professional Engineering Practice #

# Must have successfully completed STP710 Introduction to Work Placements (0 credit-point compulsory unit)

plus a six (6) credit point specialisation.

plus one elective unit at level 7 (across the University)

## Work experience

Through SEP499 Professional Engineering Practice, you'll gain industry experience by completing at least 60 days (12 full time weeks) of practical work experience in an engineering workplace, developing and enhancing your understanding of the engineering profession, possible career outcomes, and the opportunity to establish valuable professional networks.

## Details of specialisations

### **Civil Engineering – unit set code – SP-S000087**

(Commencing Trimester 2, 2019)

*Waurm Ponds (Geelong)*

#### Overview

The civil engineering specialisation focuses on the theme of infrastructure engineering and provides students with advanced knowledge in four major sub disciplines of civil engineering, namely, structural engineering, geotechnical engineering, transportation systems, and water management.

#### Units

SEN725	Urban Stormwater Management
SEN727	Advanced Geomechanics *
SEN728	Transportation Infrastructure Systems
SEN769	Advanced Structural Design *
SEV402	Traffic and Transport Engineering
SEV415	Infrastructure Engineering

\* available from 2020

### **Mechanical Engineering Design – unit set code – SP-S000089**

*Waurm Ponds (Geelong)*

#### Overview

Product development and innovation are key drivers for Australian industry. To meet this demand, this specialisation brings together studies in leading computer-aided engineering technologies, and advanced materials and manufacturing, while drawing on Deakin's world-class research teams in a practical and applied approach. You will acquire a solid understanding of product and process modelling and designing for sustainability.

#### Units

SEM400	Computational Fluid Dynamics
SEM711	Product Development Technologies
SEM712	CAE and Finite Element Analysis
SEM721	Product Development
SEM722	Advanced Manufacturing Technology
SEM724	Design for Additive Manufacturing

### **Electrical and Renewable Energy Engineering – unit set code – SP-S000088**

*Waurm Ponds (Geelong)*

#### Overview

This specialisation provides unique technical, research and practical learning experiences to prepare graduates for professional and leadership roles in contemporary power system environments.

Students will have access to industry-standard tools and world-class facilities, as well as opportunities to engage with internationally recognised teaching and research staff who have extensive experience in electrical and renewable energy.

#### Units

SEE406	Power System Analysis
SEE407	SCADA and PLC
SEE705	Energy Efficiency and Demand Management
SEE716	Electrical Systems Protection
SEE717	Smart Grid Systems
SEE718	Renewable Energy Systems

## ***Mechatronics Engineering – unit set code – SP-S000090***

*Waurm Ponds (Geelong)*

### **Overview**

This specialisation allows students to enhance the skills acquired through their undergraduate degree and specialise in technological areas associated with electronics. Students will have opportunities to explore interests in power systems, instrumentation and process control; sensor networks; and embedded systems.

### **Units**

SEE407	SCADA and PLC
SEE701	Control Systems Engineering
SEE710	Instrumentation and Process Control
SEE711	Sensor Networks
SEE712	Embedded Systems
SER400	Virtual and Augmented Interfaces

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements

### **Other learning experiences**

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

# Master of Planning (Professional)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Planning (Professional)
<i>Campus</i>	Waterfront – For students who commenced prior to 2016
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	073436A
<i>Deakin course code</i>	S764
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*Note: The Healthy Cities specialisation can only be completed in campus mode at Burwood (Melbourne). Cloud (online) students may be required to attend short campus mode intensive study periods at Waterfront (Geelong). The Healthy Cities specialisation is not available to international students.*

*The final intake to this course version was in 2015. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

The Master of Planning (Professional) is designed to meet the challenges of an ever-changing metropolitan, regional and rural environment and produces professionally qualified graduates who are analytical, informed and committed to improving the quality of the urban environment.

Students have the opportunity to specialise in Urban Design, Landscape Environmental Management, Healthy Cities or Cultural Heritage. These specialisations are central to facilitating strategic change on complex planning issues locally, regionally and globally.

As a graduate, you'll understand the broad range of disciplines that need to work together to achieve innovative and effective planning outcomes. You'll be equipped to collaborate on projects that deliver integrated solutions for both the public and private sectors.

The Master of Planning (Professional) is ideal if you have a related undergraduate degree or significant professional experience in this field and are looking to up-skill, enhance or broaden your professional qualifications. It is also suitable if you are seeking a career change and have successfully completed an undergraduate degree from another discipline.

This course, professionally accredited by the Planning Institute of Australia (PIA), has been designed in direct consultation with PIA, potential employers, industry, government and professional representatives to ensure it provides graduates with the knowledge, skills and competencies sought by employers.

Units in the course may include assessment hurdle requirements.

## Professional recognition

The Master of Planning (Professional) has professional accreditation from the Planning Institute of Australia (PIA).

## Career opportunities

There is a critical shortage of skilled, qualified and experienced practitioners, especially in rural and regional areas, who are able to plan, design, and manage sustainable social and urban change. Due to the immense change in the planning and design industry, government and professional bodies are increasingly calling for graduate programs which address this complex array of changes in an integrated way.

The Master of Planning (Professional) can provide you with the skills that will enable you to work across diverse sectors of the planning industry, with the potential to find employment in all aspects of the built environment within the public and private sectors.

## Alternate exit

- Graduate Diploma of Planning (S663)
- Graduate Certificate of Planning (S563)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	<p>Apply an integrated specialised and scholarly knowledge of ever-changing urban, regional and rural environments to produce plans that guide the development and improvement of liveable sustainable environments and communities.</p> <p>Apply broad and advanced discipline-specific planning knowledge and capabilities with adaptability and fluency in designing, developing and improving sustainable environments and communities.</p> <p>Synthesise knowledge of planning history, theory and practice to research, design, develop and manage planning projects demonstrating initiative and judgement through professional practice and scholarship.</p> <p>Develop in-depth understanding of specialist knowledge, contemporary planning practice and current research directions within the planning discipline.</p>
Communication	<p>Communicate clearly, professionally and responsibly with specialist and non-specialist audiences in a variety of contexts using oral, written, digital, graphic and interpersonal communication modes to ideate, inform, motivate public and private planning decisions and to effect change.</p> <p>Engage stakeholders in ideas and concepts; mediate, negotiate and collaboratively resolve issues and planning conflicts; and propose logical actions with formulation and cohesion appropriate to the situation.</p>
Digital literacy	<p>Apply knowledge of relevant technical tools and methodologies to locate, collect, analyse, interpret and synthesise complex information in planning practice.</p> <p>Apply digital technologies, including geographic information systems to evaluate and assess modelling and scenario building.</p>

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	<p>Laterally think and review problems, scenarios, designs and plans to address planning problems at different scales and complexities.</p> <p>Ideate to inform the creation of solutions to authentic real-world problems by comprehending systems and threads.</p> <p>Subsequently implement plans in the particular circumstances of a place using the lens and knowledge of existing and past planning theory and practice.</p>
Problem solving	<p>Apply and develop planning knowledge to identify environmental, cultural and social problems, devise ways to investigate and resolve opportunities and constraints, drawing on research-based evidence, and producing solutions as the basis for appropriate action.</p> <p>Make appropriate choices in ethically ambiguous situations based on knowledge of social, economic, environmental, and cultural aspects of planning.</p>
Self-management	<p>Represent and maintain professional standards and opinions and standards by working individually and collaboratively to produce designs and plans in an ethical and timely manner.</p> <p>Apply knowledge and skills in an independent way to solve contemporary planning problems and thereby demonstrate autonomous and expert judgements.</p>
Teamwork	<p>Produce plans with multi-disciplinary and diverse groups, including lay people, while representing and maintaining professional opinions and standards.</p> <p>Critically reflect on stakeholders needs and develop processes in order to work efficiently in teams to formulate integrated planning options.</p> <p>Implement designs and plans with a commitment to shared goals by engaging in team processes and applying knowledge of advanced interpersonal skills and time management.</p>
Global citizenship	<p>Engage with global trends and challenges confronting cities, settlements and regions and operate in a manner that recognises cultural diversity, the need for equity in outcomes and the knowledge of and implementation of high ethical professional standards.</p> <p>Interpret and document relevant governance frameworks in the development, implementation and administration of designs, strategic and statutory plans, policies and regulations.</p>

Approved by Faculty Board 27 July 2017

## Course rules

To complete the Master of Planning (Professional), students must attain 16 credit points. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year. The 16 credit points include 10 core units equalling 11 credit points (these are compulsory), 1 four-credit point specialisation from the list below and 1 elective unit (you can choose which one to study).

- 10 core units (11 credit points)
- 1 four-credit point specialisation from the list below
- 1 elective unit

## Specialisations

Refer to the details of each specialisation for availability.

- Urban Design
- Healthy Cities
- Cultural Heritage
- Landscape Environmental Management

## Details of specialisations

### **Urban Design – unit set code – SP-S000057**

*Waterfront (Geelong)*

#### Units

SRA742	Urban Perspectives
SRA760	Urban Ecologies
SRD764	Urban Design Studio
SRM771	Work Place Assessment (not available from 2018)

### **Healthy Cities – unit set code – SP-S000058**

*Burwood (Melbourne)*

#### Units

HSH709	Health and Social Impact Assessment
HSH736	Community Consultation and Participation
HSH740	Unit description is currently unavailable
SRP761	Ecological Cities and Futures

### **Cultural Heritage – unit set code – SP-S000059**

*Cloud (online)*

#### Units

AIM734	Understanding Significance
AIM703	Introduction to Heritage Planning
AIM705	Conservation Management Planning
AIP747	Unit description is currently unavailable ^

^ AIP747 Program and Policy Evaluation (No longer available for enrolment, alternative unit: AIP704).

### **Landscape Environmental Management – unit set code – SP-S000080**

*Waterfront (Geelong)*

#### Units

SRL731	Landscape Narrating and Meaning
SRL733	Indigenous Narratives and Processes
SRD760	Geo-Planning and Design
SRP761	Ecological Cities and Futures

# Master of Biotechnology and Bioinformatics

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Biotechnology and Bioinformatics
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waurm Ponds (Geelong)
<i>Cloud Campus</i>	No
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	096753J
<i>Deakin course code</i>	S772
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

This cutting-edge course provides hands-on experience of the latest techniques in biotechnology and bioinformatics research, including up-to-date bio-processing and production technologies.

Industry connectedness is an integral part of this course and ensures students have opportunities to gain an industry perspective and establish professional networks prior to graduation. Strong industry links ensure that guest lectures from key industry partners are embedded into the curriculum to provide students with an understanding of industry-engaged research and commercialisation in the biotechnology environment. Students also have the opportunity to participate in site visits and are required to undertake a Research Project in a Biotechnology related field.

Throughout the Master of Biotechnology and Bioinformatics students will also gain experience operating cutting edge analytical equipment and cell-culture bioreactors similar to those in industrial-scale production facilities and cover a wide range of emerging topics in biotechnology and, importantly, research management and business skills.

Following successful completion of the course, graduates may choose to pursue further research through a PhD, or seek employment in industry or government roles. Alternatively, students may choose to exit early with a Graduate Certificate of Research Management or Graduate Diploma of Biotechnology and Bioinformatics.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

Approximately 150 hours of learning and assessment activities per Deakin credit point.

Students will have access to a range of elective units from a variety of relevant discipline areas across the Faculty and University. This will allow them to tailor a program relevant to their specific interests, subject to academic approval. As a pathway to PhD, the proposed courses have a key component in the form of a research project. The thesis should offer a significant contribution to knowledge in the discipline concerned and demonstrate the student's capacity to carry out independent research.

Students not wishing to pursue further studies in research will have the opportunity to undertake a 4-credit point industry practice placement during their second year of studies, along with 4 course electives that will allow them to complement their studies with a range of relevant options.

## Career opportunities

As a graduate of this course, you will be uniquely positioned to commence a PhD or actively pursue research roles in industry, education, government, policy developments and teaching. Depending on your chosen area/s of expertise, you may choose to seek employment as a bioinformatician animal scientist, botanist, chemist, food scientist, material scientist, metallurgist, molecular biologist, communications specialist, researcher or science journalist. Potential employers include CSIRO, government research institutes and departments, private research institutes, health sector, private commercial companies, industrial research companies, universities, schools, agriculture and food sector, local councils and public service.

A biotechnology qualification is also highly relevant and extremely versatile in Research and Development (R&D) roles within both public and private sector research institutes. Many biotech companies engaged in manufacturing employ qualified biotechnologists as manufacturing associates in a supervisory and management capacity. Graduates also have the opportunity to become biotech product specialist and play a valuable role in marketing and selling a variety of biotechnological products ranging from biotech instruments to reagents related to genomics or proteomics. Many biotechnologists are also engaged in the rapidly expanding field of bioinformatics and contribute towards drafting biotech patent applications under the supervision of a patent lawyer.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

Graduates will be uniquely positioned to commence a PhD.

## Alternate exits

- Graduate Diploma of Biotechnology and Bioinformatics (S672) (Exit option only)
- Graduate Certificate of Research Management (S521)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate mastery and specialist knowledge through the application of scientific research principles and methodologies in the investigation of recent developments within a chosen field of study; plan and execute a substantial research project to demonstrate a deep understanding and mastery within that scientific field; creatively apply high-level technical and cognitive skills to research activities in a professional and/or academic setting in order to demonstrate in-depth knowledge of scientific methodologies pertinent to a field of study; demonstrate autonomy, well-developed judgement and responsibility to argue about characteristics and aspects of scientific research in the advancement of a discipline of science through the application of appropriate hypotheses, laws, facts and theories for investigation, testing, analysis, and evaluation of scientific data.
Communication	Present a reasoned argument that highlights essential details of scientific procedures, key observations, results and conclusions of scientific research in a professional manner using appropriate style, language and references including local, national, and international contributions or contexts; apply listening skills and effective communication skills to accommodate, encourage and answer questions from a range of audience and to defend research findings and scientific propositions; interpret the boundaries or limits of scientific information, experimental or field data, discuss error, probability, uncertainty, conclusions and arguments to justify theoretical propositions, methodologies, conclusions and professional decisions.
Digital literacy	Use well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise and disseminate scientific literature in the planning and implementation of research projects; reflect on information, data and results and develop strategies for disseminating research outcomes in a digital world.
Critical thinking	Appraise complex scientific methodologies and information using critical, analytical and logical reasoning from multiple perspectives for evaluating the merits of scientific methodologies, theoretical propositions and practice; formulate research questions to test and/or contest ideas, concepts and theoretical propositions through an evidence-based well-structured research project.
Problem solving	Plan and implement scientific research investigation by using evidence to identify problems and by applying analysis and synthesis skills, and appropriate scientific methodologies to solve research and/or practice problems; demonstrate complex problem-solving skills by identifying and creating solutions to real world ill-defined problems through scientific inquiry; contribute to advancements in scientific knowledge through mastery in the use of scientific instruments and techniques to devise an investigation, and in the collection, interpretation, analysis, synthesis and dissemination of scientific results and conclusion.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Take personal, professional and social responsibility within changing national and international professional science contexts to develop autonomy as researchers and evaluate own performances; work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.
Teamwork	Work independently and collaboratively with advice from the supervisor towards achieving the outcomes of a research project and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in diverse professional, social and cultural contexts.
Global citizenship	Apply scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with the supervisor to articulate the place and importance of scientific inquiry in the local and global context.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Biotechnology and Bioinformatics, students must attain 16 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 16 credit points, you'll need to study 16 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points, which must include the following:

Year 1 (8 credit points):

- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- Completion of SLE010 Laboratory and Fieldwork Safety Induction Program (0 credit-point compulsory unit)
- 7 core units (7 credit points)
- 1 elective unit (1 credit point)

Year 2 (8 credit points):

- Research pathway or Industry Practice pathway (8 credit points)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

STP050	Academic Integrity (0 credit points)
SLE010	Laboratory and Fieldwork Safety Induction Program (0 credit points)
SLE761	Research Planning and Communication
SLE762	Research Impact and Management
SLE763	Research Frontiers Project
SLE703	Agricultural Biotechnology
SLE706	Frontier Techniques in Biotechnology and Nanotechnology
SLE712	Bioinformatics and Molecular Biology Techniques
SLE713	Industrial and Analytical Techniques in Biotechnology

Plus one level 7 elective unit

#### Year 2

Chosen from the following pathways:

##### *Research Pathway*

SLE764	Research Thesis 1 (4 credit points)
SLE765	Research Thesis 2 (4 credit points)

OR

##### *Industry Practice Pathway*

SLE766	Industry Practice (4 credit points) <sup>^</sup>
--------	--

plus four credit points of level 7 units

<sup>^</sup> Students undertaking this unit must have successfully completed STP710 Introduction to Work Placements (0 credit point)

### Electives

Plus one level 7 elective unit chosen from existing units

## Work experience

Students will have an opportunity to complete an industry practice pathway, equivalent to 4 credit points, in place of a research pathway.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Data Analytics

Year	2019 course information
Award granted	Master of Data Analytics
Course Map	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
Campus	
Duration	1.5–2 years full-time or part-time equivalent depending on your entry point
CRICOS course code	089186E
Deakin course code	S777 (version 1)
Approval status	This course is approved by the University under the Higher Education Standards Framework.
Australian Qualifications Framework (AQF) recognition	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9

*The final intake to this course version was in 2018. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Deakin's Master of Data Analytics prepares students for professional employment across all sectors. The sheer volume and complexity of data already at the fingertips of businesses and research organisations gives rise to challenges that must be solved by tomorrow's graduates. Become a data analytics specialist capable of using data to learn insights and support decision making.

Modern organisations are placing increasing emphasis on the use of data to inform day-to-day operations and long-term strategic decisions.

Throughout your studies you'll learn to understand the various origins of data to be used for analysis, combined with methods to manage, organise and manipulate data within regulatory, ethical and security constraints. You'll develop specialised skills in categorising and transferring raw data into meaningful information for the benefit of prediction and robust decision-making.

As a graduate, your knowledge, skills and competencies in modern data science and statistical analysis will be highly valued by employers seeking greater efficiencies and competitive advantage through data insights.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Career opportunities

Graduates of this course may find careers as data analysts, data scientists, analytics programmers, analytics managers, analytics consultants, business analysts, management advisors, management analysts, business advisors and strategists, marketing managers, market research analysts and marketing specialists.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternative exits

S677.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a broad, coherent knowledge of the analytics discipline, including: the origin and characteristics of data; the methods and approaches to dealing with data appropriately and securely; and how the use of analytics outcomes can be used to improve business, organisations or society. Apply advanced knowledge and skills to decompose complex processes (from real world situations) to develop data analytics solutions for use in modern organisations across multiple industry sectors. Assess the role data analytics plays in the context of modern organisations and society in order to add value.
Communication	Communicate effectively in order to design, evaluate and respond to advances in data analytics approaches, technology, future trends and industry standards and utilise a range of verbal, graphical and written forms, customised for diverse audiences including specialist and non- specialist clients, colleagues and industry personnel.
Digital literacy	Utilise a range of digital technologies and information sources to discover, select, analyse, synthesise, evaluate, critique and disseminate both technical and professional information.
Critical thinking	Appraise complex information using critical and analytical thinking and judgement to identify problems, analyse user requirements and propose appropriate and innovative solutions.
Problem solving	Generate data solutions through the application of specialised theoretical constructs, expert skills and critical analysis to real-world, ill-defined problems to develop appropriate and innovative IT solutions.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Take personal, professional and social responsibility within changing national and international professional IT contexts to develop autonomy as researchers and evaluate own performance for continuing professional development. Work autonomously and responsibly to create solutions to new situations and actively apply knowledge of theoretical constructs and methodologies to make informed decisions.
Teamwork	Work independently and collaboratively towards achieving the outcomes of a group project, thereby demonstrating interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, manage difficult and awkward conversations, provide constructive feedback, and demonstrate the ability to function effectively in diverse professional, social and cultural contexts.
Global citizenship	Engage in professional and ethical behaviour in the design, development and management of IT systems, in the global context, in collaboration with diverse communities and cultures.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Data Analytics, students must attain 16 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 16 credit points, you'll need to study 16 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points, which must include the following:

- Four (4) core foundation units (MIS770, MIS782, SIT772, SIT718)\*
- Four (4) core analytics units (MIS771, MIS772, SIT719, SIT720)
- Four (4) 'Data' discipline specific units (SIT741, SIT742, SIT743, SIT744)
- Four (4) credit points of core project/thesis/placement units from the list provided
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

\* Core foundation units for students entering with a degree from a different discipline. Students who are entering with a related academic/professional background may be eligible for credit transfer and recognition for up to 4 of the foundation units. Please contact your course advisor for more detailed information.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
MIS770	Foundation Skills in Data Analysis
MIS782	Value of Information
SIT772	Database and Information Retrieval
SIT718	Real World Analytics

##### Trimester 2

SIT743	Multivariate and Categorical Data Analysis
SIT744	Practical Machine Learning for Data Science
SIT719	Security and Privacy Issues in Analytics
SIT720	Machine Learning

#### Year 2

##### Trimester 1

SIT741	Statistical Data Analysis
SIT742	Modern Data Science
MIS771	Descriptive Analytics and Visualisation
MIS772	Predictive Analytics

##### Trimester 2

Four (4) credit points of project/thesis/placement units from the list below:

SIT790	Major Thesis (4 cp), or
SIT791	Professional Practice (4 cp)*, or
SIT792	Minor Thesis (2 cp), and

2 additional level 7 SIT/MIS-coded elective units.

\* Students undertaking this unit must have successfully completed STP710 Introduction to Work Placements (0 credit point)

## Work experience

You will have an opportunity to undertake a placement as part of your course.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Data Science, you will complete 8, 12 or 16 credit points, depending on your prior experience.

The course is structured in three parts:

- Part A. Fundamental Data Analytics Studies (4 credit points),
- Part B. Introductory Data Science Studies (4 credit points), and
- Part C. Mastery Data Science Studies (8 credit points).

Depending upon prior qualifications and/or experience, you may receive credit for Parts A and B.

Note that if you are eligible for credit for prior studies you may elect not to receive the credit.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

Mandatory unit for all entry levels:

STP050 Academic Integrity (0 credit points)

#### *Part A: Fundamental Data Analytics Studies*

MIS770 Foundation Skills in Data Analysis  
 SIT718 Real World Analytics  
 SIT719 Security and Privacy Issues in Analytics  
 SIT740 Research and Development in Information Technology

#### *Part B: Introductory Data Science Studies*

SIT720 Machine Learning  
 SIT741 Statistical Data Analysis  
 SIT742 Modern Data Science  
 MIS771 Descriptive Analytics and Visualisation

#### *Part C: Mastery Data Science Studies*

SIT743 Multivariate and Categorical Data Analysis  
 SIT744 Practical Machine Learning for Data Science  
 SIT764 Project Analysis and Design ~  
 SIT782 Project Delivery ~

~ Note: Students are expected to undertake SIT764 and SIT782 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT764 and SIT782 consecutively.

### Electives

Electives should be selected from one of the following combinations:

Four (4) credit points of project/thesis/placement units from the list below:

SIT790 Major Thesis (4 cp), or  
 SIT791 Professional Practice (4 cp)\*, or  
 SIT792 Minor Thesis (2 cp), and

2 additional level 7 SIT/MIS-coded elective units or

SIT709 Internship – Information Technology (1 cp)\*, and

3 additional level 7 SIT/MIS-coded elective units

\* Students undertaking this unit must have successfully completed STP710 Introduction to Work Placements (0 credit point)

## Work experience

You will have an opportunity to undertake a placement as part of your course.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

## Other learning experiences

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

# Master of Information Technology

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Information Technology
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1.5 years full-time or part-time equivalent
<i>CRICOS course code</i>	035505G
<i>Deakin course code</i>	S778
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

Deakin's Master of Information Technology provides a combination of leading-edge theory and technical knowledge with hands-on practical experience to prepare you for a successful career as an IT professional in Australia and around the world.

Delivered in a supportive learning environment, this course will transform you into a competent IT professional with the capacity to develop and implement IT solutions to complex industry-related problems.

As a graduate, you will possess a solid understanding of the issues, concepts and practices in IT and a broad knowledge of the technological aspects of IT. You will also develop a raft of transferrable skills that will enable you to be an effective and efficient IT professional.

This course is continually refined in consultation with industry to ensure the content is relevant and up-to-date with rapidly changing workplace demands. As a graduate, you'll be highly sought-after for employment across a range of industries for your specialist skills and ability to meet future industry requirements.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Information Technology is accredited by the Australian Computer Society (ACS).

## Career opportunities

As a Master of Information Technology graduate, you may find employment as a business analyst, network administrator, database administrator, security analyst, solutions architect, software developer, technology consultant, or security systems manager.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

Students commencing in Trimester 3 will be required to complete units in Trimester 3.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Income support

Domestic students enrolled in certain postgraduate coursework programs may be eligible for student income support through Youth Allowance and Austudy.

Further information can be found at Deakin University's Fees website.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a broad, coherent knowledge of the IT discipline, including its dynamic environment, with expert knowledge of the technological aspects of IT, and in depth knowledge in the chosen area of specialisation. Design, develop and implement advanced IT systems and software, and associated policies and procedures for optimal use and apply industry standards and best practice in one or more specialised areas of IT.
Communication	Communicate effectively in order to design, evaluate and respond to advances in technology, future trends and industry standards and utilise a range of verbal, graphical and written forms, customised for diverse audiences including specialist and non- specialist clients, colleagues and industry personnel.
Digital literacy	Utilise a range of digital technologies and information sources to discover, select, analyse, synthesise, evaluate, critique and disseminate both technical and professional information.
Critical thinking	Appraise complex information using critical and analytical thinking and judgement to identify problems, analyse user requirements and propose appropriate and innovative solutions.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Information Technology, students must attain 12 credit points. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 12 credit points, which must include the following:

- four (4) core units
- one 4-credit point specialisation
- four (4) level 7 SIT-coded elective units
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Specialisations

Refer to the details of each specialisation for availability.

- Data Analytics
- Networking
- Software and Services Development
- Cyber Security
- IT Strategy and Management
- Virtual Reality

## Course structure

### Core

Four core units:

STP050	Academic Integrity (0 credit points)
SIT725	Software Engineering
SIT740	Research and Development in Information Technology
SIT764	Project Analysis and Design ~
SIT782	Project Delivery

~ Note: Students are expected to undertake SIT764 and SIT782 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT764 and SIT782 consecutively.

### Electives

Select the remaining 4 credit points from a range of level 7 SIT-coded elective units offered.

## Work experience

You will have an opportunity to undertake a discipline-specific internship placement as part of your course. [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

## Details of specialisations

### **Data Analytics – unit set code – SP-S000055**

*Burwood (Melbourne), Cloud (online)*

#### Overview

The Data Analytics specialisation has been designed to provide students the opportunity to undertake study and develop technical skills in key areas of data analytics – data acquisition and modelling, data visualisation, and decision support leading to business intelligence.

#### Units

SIT717	Enterprise Business Intelligence
SIT718	Real World Analytics
SIT742	Modern Data Science
SIT744	Practical Machine Learning for Data Science

### **Networking – unit set code – SP-S000021**

*Burwood (Melbourne)*

#### Overview

Plan, install and manage both local area networks and wide area networks with a strong focus on network design, routing protocols and switching concepts. The specialisation incorporates the CISCO CCNA curriculum which prepares students for the CCNA industry certification. There is a strong focus on application development for networked systems and supporting user mobility from both application and network perspectives.

#### Units

SIT701	Enterprise Network Construction
SIT702	Enterprise Network Management
SIT706	Cloud Computing Technologies
SIT735	Communications Network Security

## **Software and Services Development – unit set code – SP-S000023**

*Burwood (Melbourne), Cloud (online)*

### **Overview**

Gain theoretical and practical skills in current trends in the analysis, design and implementation of complex and large-scale software systems. Designed with input from industry leaders, there is a strong focus on the development of high quality software using methodologies, tools, techniques and management principles relevant to industry. There is emphasis on the development of web-based and distributed applications and the use and development of open source software.

### **Units**

SIT707	Software Quality and Testing
SIT708	Mobile Systems Development
SIT737	Service Oriented Architectures and Technologies
SIT780	Enterprise Applications Development

## **Cyber Security – unit set code – SP-S000028**

*Burwood (Melbourne), Cloud (online)*

### **Overview**

Develop skills in securing data, communications and infrastructure as well as investigating, analysing and providing solutions to computer crime. Students gain an understanding of problem solving, communication and technical capabilities related to Information Technology Security and the legal, regulatory and ethical contexts in which these skills are used. The security units provide a solid foundation in areas including information security, internet and network security, access controls and firewalls. In conjunction with work experience, the units prepare students towards certification as a Certified Information Systems Security Professional on completion of the CISSP exam administered by The International Information Systems Security Certification Consortium (ISC)2.

### **Units**

SIT703	Advanced Digital Forensics
SIT704	Advanced Topics in Digital Security
SIT735	Communications Network Security
SIT763	Cyber Security Management

## **IT Strategy and Management – unit set code – SP-S000056**

*Burwood (Melbourne), Cloud (online)*

### **Overview**

The IT Strategy and Management specialisation has been designed to provide students with an understanding of the skills required to effectively drive business process improvement, manage IT services, develop IT strategies and manage innovation.

### **Units**

SIT794	Services Management
MIS782	Value of Information
MIS712	eBusiness Strategies
MPM712	Managing Innovation

## **Virtual Reality – unit set code – SP-S000083**

*Burwood (Melbourne)*

### **Overview**

Virtual Reality (VR) is an immersive digital environment that can replicate lifelike physical environments or portray a fictional artificial world, and makes the user feel they are immersed in that environment in real-life. These can be viewed through a head mounted display (e.g. Oculus Rift and HTC Vive), a smartphone based display (e.g. Google Cardboard) or by standing within a cube or dome showing 3D projections on every surface. VR allows users to interact with these environments and can also create additional sensory experiences including virtual touch through haptic technology, smell, taste and sound. There is a strong emphasis on creating content that will assist in shaping the future of education, training and entertainment.

### **Career outcomes**

Virtual Reality and Augmented Reality skills are in high demand across a range of industries and graduates may find employment as Virtual Reality Game Designers, Oculus Developers, Game Producers, 3D Designers and Gameplay Engineers to name a few.

### **Units**

SIT755	Interaction and Design for Virtual Reality and Augmented Reality
SIT756	Development for Virtual Reality
SIT757	Content Creation for Virtual Reality
SIT758	Virtual Reality On Mobile Platforms

### **Work placement opportunity**

SIT759 Virtual Reality Professional Practice (4 credit points) only available as an elective to students undertaking the Virtual Reality specialisation (students must have successfully completed STP710 Introduction to Work Placements (0 credit point unit)). Conditions apply.

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### **Other learning experiences**

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

# Master of Information Technology (Professional)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Information Technology (Professional)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Burwood (Melbourne)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	051581G
<i>Deakin course code</i>	S779
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

The Master of Information Technology (Professional) is designed to extend the specialised information technology skills obtained in the Master of Information Technology by providing students with the opportunity to undertake a trimester of industry-based learning or a trimester long research project under the supervision of our internationally-recognised research staff.

This course has a strong IT industry focus and empowers students to apply the acquired knowledge and skills towards professional practice and enables them to create innovative IT solutions to solve real-world problems. Students will develop teamwork and leadership skills through close mentorship during industry projects and engagement in researching cutting edge IT solutions, and can choose to specialise in security, networking, analytics or computer science depending on their interests and career aspirations.

Throughout the course, students will develop a broad understanding of the IT discipline including its dynamic environment, expert knowledge of the technological aspects of IT, and in-depth skills in their chosen area of specialisation.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, practicals and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The Master of Information Technology (Professional) is accredited by the Australian Computer Society (ACS).

## Career opportunities

Graduates of this course may find employment as a business analyst, network administrator, database administrator, security analyst, solutions architect, software developer, technology consultant, or security systems manager.

## Participation requirements

Elective units may be selected that include compulsory placements, work-based training, community-based learning or collaborative research training arrangements.

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

Students commencing in Trimester 3 will be required to complete units in Trimester 3.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Equipment requirements

For information regarding hardware and software requirements, please refer to the School of Information Technology's website, [deakin.edu.au/information-technology/students](http://deakin.edu.au/information-technology/students) or telephone 03 9244 6699.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Develop a broad, coherent knowledge of the IT discipline, including its dynamic environment, with expert knowledge of the technological aspects of IT, and in depth knowledge in the chosen area of specialisation. Design, develop and implement advanced IT systems and software, and associated policies and procedures for optimal use and apply industry standards and best practice in one or more specialised areas of IT. Assess the role of IT in the context of modern organisations and society in order to add value.
Communication	Communicate effectively in order to design, evaluate and respond to advances in technology, future trends and industry standards and utilise a range of verbal, graphical and written forms, customised for diverse audiences including specialist and non-specialist clients, colleagues and industry personnel.
Digital literacy	Utilise a range of digital technologies and information sources to discover, select, analyse, synthesise, evaluate, critique and disseminate both technical and professional information.
Critical thinking	Appraise complex information using critical and analytical thinking and judgement to identify problems, analyse user requirements and propose appropriate and innovative solutions. Evaluate the place and role of IT its systems, applications and processes in organisational and societal contexts for reliability, usefulness and the value they add to those contexts.
Problem solving	Generate IT solutions through the application of specialised theoretical constructs, expert skills and critical analysis to real-world, ill-defined problems to develop appropriate and innovative IT solutions.

Deakin graduate learning outcomes	Course learning outcomes
Self-management	Take personal, professional and social responsibility within changing national and international professional IT contexts to develop autonomy as researchers and evaluate own performance for continuing professional development. Work autonomously and responsibly to create solutions to new situations and actively apply knowledge of theoretical constructs and methodologies to make informed decisions.
Teamwork	Work independently and collaboratively towards achieving the outcomes of a group project, thereby demonstrating interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, manage difficult and awkward conversations, provide constructive feedback, and demonstrate the ability to function effectively in diverse professional, social and cultural contexts.
Global citizenship	Engage in professional and ethical behaviour in the design, development and management of IT systems, in the global context, in collaboration with diverse communities and cultures.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Information Technology (Professional), students must attain 16 credit points. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points, which must include the following:

- all requirements for the 12 credit point Master of Information Technology must be met including:
- four (4) core units
- one 4-credit point specialisation
- four level 7 SIT-coded units
- completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- plus a further 4 credit points as detailed below.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Specialisations

Refer to the details of each specialisation for availability.

- Data Analytics
- Networking
- Software and Services Development
- Cyber Security
- IT Strategy and Management
- Virtual Reality

## Course structure

### Core

Four core units from the Master of Information Technology:

STP050	Academic Integrity (0 credit points)
SIT725	Software Engineering
SIT740	Research and Development in Information Technology
SIT764	Project Analysis and Design ~
SIT782	Project Delivery

Plus 4 level 7 SIT elective units

Plus four core units from the Master of Information Technology (Professional)

SIT790	Major Thesis (4 cp), or
SIT791	Professional Practice (4 cp)*, or
SIT759	Virtual Reality Professional Practice (4 cp)*^, or
SIT792	Minor Thesis (2 cp), and

2 additional level 7 SIT-coded elective units.

\* Students undertaking this unit must have successfully completed STP710 Introduction to Work Placements (0 credit point)

^ This unit is only available to students undertaking the Virtual Reality specialisation.

~ Note: Students are expected to undertake SIT764 and SIT782 in consecutive trimesters. Students should seek advice from the unit chair if they are unable to complete SIT764 and SIT782 consecutively.

### Electives

Select the remaining 4 credit points from a range of level 7 SIT-coded elective units offered.

## Work experience

You will have an opportunity to complete an IT internship of 120–160 hours in a course-related organisation. Please refer to [deakin.edu.au/sebe/wil](http://deakin.edu.au/sebe/wil).

## Details of specialisations

### **Data Analytics – unit set code – SP-S000055**

*Burwood (Melbourne), Cloud (online)*

#### Overview

The Data Analytics specialisation has been designed to provide students the opportunity to undertake study and develop technical skills in key areas of data analytics – data acquisition and modelling, data visualisation, and decision support leading to business intelligence.

#### Units

SIT717	Enterprise Business Intelligence
SIT718	Real World Analytics
SIT742	Modern Data Science
SIT744	Practical Machine Learning for Data Science

### **Networking – unit set code – SP-S000021**

*Burwood (Melbourne)*

#### Overview

Plan, install and manage both local area networks and wide area networks with a strong focus on network design, routing protocols and switching concepts. The specialisation incorporates the CISCO CCNA curriculum which prepares students for the CCNA industry certification. There is a strong focus on application development for networked systems and supporting user mobility from both application and network perspectives.

## Units

SIT701	Enterprise Network Construction
SIT702	Enterprise Network Management
SIT706	Cloud Computing Technologies
SIT735	Communications Network Security

### **Software and Services Development – unit set code – SP-S000023**

*Burwood (Melbourne), Cloud (online)*

#### Overview

Gain theoretical and practical skills in current trends in the analysis, design and implementation of complex and large-scale software systems. Designed with input from industry leaders, there is a strong focus on the development of high quality software using methodologies, tools, techniques and management principles relevant to industry. There is emphasis on the development of web-based and distributed applications and the use and development of open source software.

## Units

SIT707	Software Quality and Testing
SIT708	Mobile Systems Development
SIT737	Service Oriented Architectures and Technologies
SIT780	Enterprise Applications Development

### **Cyber Security – unit set code – SP-S000028**

*Burwood (Melbourne), Cloud (online)*

#### Overview

Develop skills in securing data, communications and infrastructure as well as investigating, analysing and providing solutions to computer crime. Students gain an understanding of problem solving, communication and technical capabilities related to Information Technology Security and the legal, regulatory and ethical contexts in which these skills are used. The security units provide a solid foundation in areas including information security, internet and network security, access controls and firewalls. In conjunction with work experience, the units prepare students towards certification as a Certified Information Systems Security Professional on completion of the CISSP exam administered by The International Information Systems Security Certification Consortium (ISC)2.

## Units

SIT703	Advanced Digital Forensics
SIT704	Advanced Topics in Digital Security
SIT735	Communications Network Security
SIT763	Cyber Security Management

### **IT Strategy and Management – unit set code – SP-S000056**

*Burwood (Melbourne), Cloud (online)*

#### Overview

The IT Strategy and Management specialisation has been designed to provide students with an understanding of the skills required to effectively drive business process improvement, manage IT services, develop IT strategies and manage innovation.

## Units

SIT794	Services Management
MIS782	Value of Information
MIS712	eBusiness Strategies
MPM712	Managing Innovation

## **Virtual Reality – unit set code – SP-S000083**

*Burwood (Melbourne)*

### **Overview**

Virtual Reality (VR) is an immersive digital environment that can replicate lifelike physical environments or portray a fictional artificial world, and makes the user feel they are immersed in that environment in real-life. These can be viewed through a head mounted display (e.g. Oculus Rift and HTC Vive), a smartphone based display (e.g. Google Cardboard) or by standing within a cube or dome showing 3D projections on every surface. VR allows users to interact with these environments and can also create additional sensory experiences including virtual touch through haptic technology, smell, taste and sound. There is a strong emphasis on creating content that will assist in shaping the future of education, training and entertainment.

### **Career outcomes**

Virtual Reality and Augmented Reality skills are in high demand across a range of industries and graduates may find employment as Virtual Reality Game Designers, Oculus Developers, Game Producers, 3D Designers and Gameplay Engineers to name a few.

### **Units**

SIT755	Interaction and Design for Virtual Reality and Augmented Reality
SIT756	Development for Virtual Reality
SIT757	Content Creation for Virtual Reality
SIT758	Virtual Reality On Mobile Platforms

### **Work placement opportunity:**

SIT759 Virtual Reality Professional Practice (4 credit points) only available as an elective to students undertaking the Virtual Reality specialisation (students must have successfully completed STP710 Introduction to Work Placements (0 credit point unit)). Conditions apply.

### **Course duration**

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

### **Other learning experiences**

You may choose to use one of your elective units to undertake an internship or participate in an overseas study tour to enhance your global awareness and experience.

# Master of Professional Practice (Engineering)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Professional Practice (Engineering)
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Cloud (online)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2–2.5 years part-time
<i>Deakin course code</i>	S788
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*New course commencing Trimester 1, 2019*

*International students: due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in this fully online degree through Deakin's Cloud Campus.*

## Course overview

This innovative program awards a Masters qualification largely based on recognition of professional practice and is designed for experienced Engineering professionals seeking further career advancement. Completion of this degree recognises the discipline-based knowledge and skills developed by professionals in the workplace and offers employers and professionals an alternative, and equivalent to traditional higher Master's degree offering new ways to match capability and opportunity.

## Indicative student workload

Successful students typically spend about 150 hours in learning and assessment for each one credit point unit. The time required to prepare evidence for credential assessment varies based on the student's existing documentation.

## Career opportunities

The Master of Professional Practice (Engineering) is designed for experienced professionals seeking to progress their career through a professionally recognised postgraduate qualification.

Graduates of the Master of Professional Practice (Engineering) will automatically be given professional registration as a professional engineer (National Engineers Register), and attain Engineers Australia Chartered membership status, providing them a clear path to Chartered and independent practice as an engineering professional. Upon the completion of this program, graduates will demonstrate advanced skills and complex knowledge in the Engineering discipline areas they have selected to advance their career.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Pathways

There are currently no pathway or credit arrangements.

## Alternative exits

S688, S588.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an integrated understanding and superior ability to apply contemporary Engineering theory and practices.
Communication	Use advanced communication tools, techniques and media to engage and inspire others about engineering professional practice.
Digital literacy	Discover, analyse, synthesise and disseminate complex engineering information, data and ideas to stakeholders, strategic partners and professional colleagues using a range of digital technologies and channels.
Critical thinking	Systematically and critically analyse and test engineering models and theories to develop optimum engineering solutions.
Problem solving	Apply advanced problem-solving skills to conceptualise, design, construct and advocate for recommended solutions for complex engineering related issues.
Self-management	Advance personal development and capacity as a leader to proactively drive and take responsibility for strategic results.
Teamwork	Work across a range of professions, functions, contexts or teams to optimise collaborative outcomes.
Global citizenship	Define and reinforce the vision and values that orient collective effort, socially responsibility and ethical decision making.

Approved by Faculty Board 19 October 2018

## Course rules

To qualify for the Master of Professional Practice (Engineering), students must successfully complete 3 core units (totalling 4 credit points) of formal study and 10 Professional Practice credentials. Each Professional Practice credential will assess the performance at a masters (advanced) level in one of the Deakin Graduate Learning Outcomes contextualised to Engineering.

The course comprises the following:

- 3 core units (totalling 4 credit points)
- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)
- 10 Professional Practice Credentials (Advanced Level)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

STP050	Academic Integrity (0 credit points)
SEP701	Introduction to Engineering Professional Practice
SEB725	Engineering Entrepreneurship
SEP702	Mastery of Engineering (2cp)

### Credentials

Plus 10 Professional Practice Credentials (completed at the advanced level) as follows. Students are able to commence their credentials at anytime, utilising Deakin's Start Anytime calendar.

Credential code	Professional practice credentials	Minimum level
CRCOM-A1	Communication (Masters-aligned)	Advanced
CRDIL-A1	Digital literacy (Masters-aligned)	Advanced
CRCRI-A1	Critical thinking (Masters-aligned)	Advanced
CRPSV-A1	Problem solving (Masters-aligned)	Advanced
CRSMA-A1	Self-management (Masters-aligned)	Advanced
CRTWK-A1	Teamwork (Masters-aligned)	Advanced
CRGCZ-A1	Global citizenship (Masters-aligned)	Advanced
CRPRE-A1	Professional ethics (Masters-aligned)	Advanced
<b>Knowledge based credentials:</b>		
CRENG-A1	Engineering Professional Expertise 1 (Masters-aligned)	Advanced
CRENG-A2	Engineering Professional Expertise 2 (Masters-aligned)	Advanced

### Work experience

SEP702 Mastery of Engineering is designed for students to undertake a workplace research project with a view to theorise their own engineering knowledge, skills, and professional practice.

### Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Information Technology Leadership

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Information Technology Leadership
<i>Campus</i>	Cloud (online)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	1–2.5 years part-time*
<i>Deakin course code</i>	S789
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

*International students: due to Australian Government regulations, student visas to enter Australia cannot be issued to students who enrol in this fully online degree through Deakin's Cloud Campus.*

\* Students have the opportunity of fast-tracking the course in one year by completing units in three consecutive trimesters and all credentials within the first two trimesters of study.

## Course overview

This innovative program awards a masters level qualification largely based on recognition of professional practice and is ideally suited to experienced IT professionals with domain experience seeking career advancement.

The model offers employers and professionals an alternative to traditional higher education that is credible, validated and offers new ways to match capability and opportunity. This setup aims to help the professionals to reach their full potential by accelerating the completion of the program on the basis of prior learning and work experience.

Completion of this degree recognises the discipline-based knowledge and skills developed by professionals in the workplace and credentialed through Deakin. This is coupled with employability skills that are validated and endorsed through a final holistic assessment of the student. Upon the completion of this program, graduates will possess advanced skills and complex knowledge in the discipline areas they have selected to advance their career.

## Indicative student workload

Successful students typically spend about 150 hours in learning and assessment for each one credit point unit. The time required to prepare evidence for credential assessment varies based on the student's existing documentation.

## Career opportunities

# Master of Construction Management

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Construction Management
<i>Course Map</i>	<a href="http://deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps">deakin.edu.au/students/enrolment-fees-and-money/enrolments/course-maps</a>
<i>Campus</i>	Offered at Waterfront (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	*1.5 years full-time or part-time equivalent
<i>CRICOS course code</i>	079320J
<i>Deakin course code</i>	S791
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

\* Students have the opportunity of completing the course in one year full-time (3 trimesters) by undertaking units in trimester 3.

## Course overview

The Master of Construction Management blends innovative practice and cutting-edge research using a case-based approach to learning to provide you with specialist skills related to the theoretical, policy, evaluative and research frameworks that underpin the construction professions.

The course is ideally suited to those with a construction background seeking to upskill, as well as those who completed an undergraduate degree in a related area who are looking to enter the construction management profession. This could be through pathways such as architecture, quantity surveying, engineering, property or construction management.

The course gives you an understanding across a variety of roles relevant to quantity surveying and construction management. It is suitable for personnel involved in the procurement of built facilities as project managers, design managers, construction managers or quantity surveyors. It is also suitable for people in government departments and commercial organisations responsible for the procurement of such facilities.

You'll work in a multi-disciplinary context to explore topics at the forefront of the built environment industry. The course is distinguished by its flexible delivery mode. It brings together a range of built environment disciplines to look at issues of true international significance in terms of procurement and contractual options, project financing and sustainability economics.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, site visits and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The course is professionally accredited by the Royal Institution of Chartered Surveyors (RICS) and the Australian Institute of Quantity Surveyors (AIQS).

## Career opportunities

Graduates will find career opportunities in the fields of quantity surveying and construction management with a wide spectrum of employers which include construction companies, quantity surveying, project management and construction consultants. In addition, they will also be eligible for relevant positions in client organisations in the property development arms of government departments and commercial companies such as banks, retailers and manufacturers.

Graduates who wish to do so will be able to pursue their careers overseas in Europe, Asia, the Middle East and North America.

## Participation requirements

You will be required to complete units in Trimester 3 should you wish to complete your course in one year instead of 1.5 years.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternate exits

Graduate Diploma of Construction Management (S691) (This course is an exit option only)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Apply an integrated specialised and evidence-based scholarly knowledge of ever-changing construction industry practices in order to improve construction economics and construction life cycle management. Develop and demonstrate a complex body of knowledge of construction management and practices, cost planning and control, legal and risk management in order to manage construction companies and projects.
Communication	Communicate clearly, professionally and responsibly with specialist and non-specialist audiences in a variety of contexts using oral, written, graphical and interpersonal skills to inform, negotiate, lead and motivate a project team. Engage with a variety of participants and contributing influences including legal, economic and environmental impacts in construction projects to mediate, negotiate and collaboratively resolve issues and conflicts.
Digital literacy	Apply knowledge of relevant technical tools and methodologies to locate, collect, analyse and synthesise complex information from a variety of sources to prepare cost benefit plans and legal, risk and environment implication analyses for construction projects. Use digital technologies, including geographic information systems to evaluate and assess modelling and scenario building.

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	Use expert reasoning and analysis skills, drawing on knowledge and information from a range of professional or scholarly sources to reflect on, analyse and synthesise complex legal, economic and environmental influences and impacts for collaboratively and independently planning and making decisions in construction.
Problem solving	Apply specialized technical skills and judgment to identify potential legal, environmental and economic risks and problems and recommend appropriate solutions for effective risk management in construction. Demonstrate autonomy and well-developed judgement to independently and collaborative generate strategies and solutions to manage construction projects at various stages including planning, implementing, construction and evaluation of the built environment.
Self-management	Apply critical reflection and use frameworks of self and peer evaluation to develop independent judgment, adaptability and responsibility for expert professional practice and/or scholarship.
Teamwork	Apply interpersonal skills to interact, contribute, collaborate and develop leadership skills through teamwork activities, and enhance project potential through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship	Engage ethically and professionally when working in a variety of construction management situations through concern for legal, economic, environmental and social risks both nationally and globally.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Construction Management, students must attain 12 credit points, which must include the following. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

The 12 credit points comprise 11 core units (including 1 core unit worth 2 credit points) that are compulsory.

Please note that for professional accreditation purposes, students are required to complete a minimum of 150 study hours for each unit.

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SRQ763	Legal Risk Management
SRM750	Built Environment Professional Practice
SRQ780	Strategic Construction Procurement *
SRR720	Construction Research Frontiers ^

##### Trimester 2

SRM751	Principles of Building Information Modelling
SRQ745	Construction Company Management
SRQ764	Building Project Evaluation **
SRQ774	Construction Measurement

##### Trimester 3

SRM752	Advanced Project Management *
SRQ762	Cost Planning **
SRR721	Construction Research Project (2cp)^

\* Unit offered in Trimester 1 and Trimester 3

\*\* Unit offered in Trimester 2 and Trimester 3

^ Unit offered in all trimesters

+ Students intending to apply for entry into Higher Degree by Research may be required to complete SRR711 Thesis instead of SRR721 Construction Research Project.

<i>Campus</i>	Offered at Waterfront (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	079321G
<i>Deakin course code</i>	S792
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

The Master of Construction Management (Professional) provides you with specialised skills related to the theoretical, evaluative and research frameworks that underpin the construction professions.

Students will be challenged to stretch their thinking in a supportive environment and instilled with the motivation to be independent learners in their career.

You'll work in a multi-disciplinary context to explore topics that are at the forefront of the built environment industry, including Project Feasibility Evaluation, Cost Planning, Professional Business Practice, Construction Measurement, Commercial Construction Organisation, Design Management, Legal Risk Management, Sustainability and Strategic Construction Procurement.

Units in the course may include assessment hurdle requirements.

## Indicative student workload

You can expect to participate in a range of teaching activities each week. This could include classes, seminars, site visits and online interaction. You can refer to the individual unit details in the course structure for more information. You will also need to study and complete assessment tasks in your own time.

## Professional recognition

The course is professionally accredited by the Royal Institution of Chartered Surveyors (RICS) and the Australian Institute of Quantity Surveyors (AIQS).

## Career opportunities

As a graduate of this course, you will find career opportunities in the fields of quantity surveying, project management and construction management with a wide range of employers, including construction companies and consultancies. You will also be qualified for relevant positions in client organisations, in the property development arms of government departments, and in commercial companies such as banks, retailers and manufacturers.

Construction management professionals are generally highly mobile and the Royal Institution of Chartered Surveyors (RICS) accreditation provides an immediate, readily recognised international qualification. Graduates who wish to do so will be able to pursue their careers in Europe, Asia, the Middle East and North America. This course is relevant to experienced mid career construction professionals who are seeking to extend themselves into future leadership positions within the industry.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Mandatory student checks

Any unit which contains work integrated learning, a community placement or interaction with the community may require a police check, Working with Children Check or other check.

## Alternate exits

- Graduate Diploma of Construction Management (S691) (This course is an exit option only)
- Master of Construction Management (S791)

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Integrate broad and specialist knowledge of construction management practices in the industry and advocate sustainable management of social built environments in urban, regional and rural communities through professional practice. Apply an integrated specialised and evidence-based scholarly knowledge of ever-changing construction industry practices in order to improve construction economics and construction life cycle management. Develop and demonstrate a complex body of knowledge of construction management and practices, cost planning and control, legal and risk management in order to manage construction companies and projects.
Communication	Communicate clearly, professionally and responsibly with specialist and non-specialist audiences in a variety of contexts using oral, written, graphical and interpersonal skills to inform, negotiate, lead and motivate a project team. Engage with a variety of participants and contributing influences including legal, economic and environmental impacts in construction projects to mediate, negotiate and collaboratively resolve issues and conflicts.
Digital literacy	Apply knowledge of relevant technical tools and methodologies to locate, collect, analyse and synthesise complex information from a variety of sources to prepare cost benefit plans and legal, risk and environment implication analyses for construction projects. Apply knowledge of digital technologies for modelling and scenario building, including geographic information systems to evaluate and assess various scenarios for disseminating relevant analysis to clients.

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking: evaluating information using critical and analytical thinking and judgment.	Use expert reasoning and analysis skills, drawing on knowledge and information from a range of professional or scholarly sources to reflect on, analyse and synthesise complex legal, economic and environmental influences and impacts for collaboratively and independently planning and making decisions in construction.
Problem solving	Apply specialized technical skills and judgment to identify potential legal, environmental and economic risks and problems and recommend appropriate solutions for effective risk management in construction. Demonstrate professionalism, autonomy and well-developed judgement to independently and collaboratively generate strategies and solutions to manage construction projects at various stages including planning, implementing, construction and evaluation of the built environment.
Self-management	Apply critical reflection and use frameworks of self and peer evaluation to develop independent judgment, adaptability and responsibility for expert professional practice and/or scholarship.
Teamwork	Apply interpersonal skills to interact, contribute, collaborate and develop leadership skills through teamwork activities, and enhance project potential through shared individual and collective knowledge and creative capacity to optimise complex problem resolution.
Global citizenship	Engage ethically and professionally when working in a variety of construction management situations through concern for legal, economic, environmental and social risks both nationally and globally.

Approved by Faculty Board 7 June 2018

## Course rules

To complete the Master of Construction Management (Professional), students must attain 16 credit points, Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points of study which must include the following.

- Completion of STP050 Academic Integrity (0-credit-point compulsory unit)

Students are required to meet the University's academic progress and conduct requirements. Visit Deakin's website for more information.

## Course structure

### Core

#### Year 1

##### Trimester 1

STP050	Academic Integrity (0 credit points)
SRQ763	Legal Risk Management
SRM750	Built Environment Professional Practice
SRQ780	Strategic Construction Procurement *
SRR720	Construction Research Frontiers ^

## Trimester 2

SRM751	Principles of Building Information Modelling
SRQ745	Construction Company Management
SRQ764	Building Project Evaluation **
SRQ774	Construction Measurement

## Year 2

### Trimester 1

SRV799	Built Environment Integrated Project *
SRM752	Advanced Project Management *
SRR721	Construction Research Project (2cp)^

### Trimester 2

SRT750	Sustainable Futures
SRQ762	Cost Planning **
SRM777	Construction Management Practice (2cps)^~

\* Unit offered in Trimester 1 and Trimester 3

\*\* Unit offered in Trimester 2 and Trimester 3

~ Must have successfully completed STP710 Introduction to Work Placements (0 credit point unit)

^ Unit offered in all trimesters

+ Students intending to apply for entry into Higher Degree by Research may be required to complete SRR711 Thesis instead of SRR721 Construction Research Project

## Work experience

You may have the opportunity to complete a Work Integrated Learning experience.

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Facilities Management

<i>Award granted</i>	Master of Facilities Management
<i>Campus</i>	For students who commenced prior to 2015
<i>Duration</i>	1.5 years full-time or part-time equivalent
<i>Deakin course code</i>	S795

*The final intake to this course version was in 2014. Students should contact a student advisor for course and enrolment information. Further course structure information can be found in the Handbook archive.*

## Course overview

Facilities management is an emerging discipline that centres around the management of existing facilities and the strategic alignment of physical infrastructure to an organisation's core business goals, and the important health and safety needs of its workforce and customers.

Deakin's Master of Facilities Management will equip you to be able to work across traditional professional boundaries, from property investment and development through to space management and workplace logistics, using key project management skills to ensure optimum value for money is attained at all stages of the property life cycle.

Units in the course may include assessment hurdle requirements.

## Career opportunities

Multiple career opportunities can arise from a qualification in facilities management. These include: asset and property management, property investment and management, workplace logistics and strategic technical services, sustainable practices and effective planning and design of space.

## Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course rules

To qualify for the award of Master of Facilities Management, you must successfully complete 12 credit points as follows:

- 11 core units (12 credit points)

## Master of Architecture (Research)

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Architecture (Research)
<i>Campus</i>	Waterfront (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	070375M
<i>Deakin course code</i>	S800
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

### Course overview

Deepen your knowledge on a chosen topic within the field of architecture through independent, sustained and academically-supervised research.

Undertake a research investigation in architecture and develop advanced skills in critical thinking, analysis and research methodologies under the supervision of internationally-recognised research staff.

The School of Architecture and Built Environment specialises in socio-cultural ecology, tectonic ecology and construction ecology themes. You can choose topics from areas including architectural history and theory, environmental building science, professional practice and parametric modelling.

To qualify for a Master by Research, students must demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating a substantial contribution to knowledge through the use of appropriate research principles and methods. This is in the form of a thesis of up to 50,000 words in length which will be assessed via an external examination. Although the focus of the degree is on research, students are also required to complete a minimum of one unit of coursework.

When applying, contact the School for guidance on developing research proposals.

### Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

### Fees and charges

Fees and charges vary depending on your course, your fee category and the year you started. To find out about the fees and charges that apply to you, visit [deakin.edu.au/fees](http://deakin.edu.au/fees).

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating substantial contribution to knowledge through the use of appropriate research principles and methods.
Communication	Demonstrate autonomy, expert judgement, adaptability, initiative, resilience and responsibility as a practitioner or learner.
Digital literacy	Demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating substantial contribution to knowledge through the use of appropriate research principles and methods
Critical thinking	Apply critical analysis and reflection to ethically research, synthesize and evaluate complex information, problems, concepts, interpretations and theories to demonstrate cognitive and technical skills in a body of knowledge or practice.  Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.
Problem solving	Apply critical analysis and reflection to ethically research, synthesize and evaluate complex information, problems, concepts, interpretations and theories to demonstrate cognitive and technical skills in a body of knowledge or practice.  Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.

## Course overview

Deepen your expertise in a chosen area within the field of construction management through independent, sustained and academically-supervised research.

The Master of Construction Management (Research) gives you the opportunity to conduct research in the construction management and building disciplines. You'll write a thesis explaining the research carried out in your field of study. You'll also be referred to prospective supervisors in order to establish a possible research project.

To qualify for a Master by Research, students must demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating a substantial contribution to knowledge through the use of appropriate research principles and methods. This is in the form of a thesis of up to 50,000 words in length which will be assessed via an external examination. ## Course overview

The first of its kind to be offered at Deakin, the Master of Science (Research) comprises a unique combination of coursework and research, and is ideally suited to those seeking a pathway between undergraduate and PhD studies. You will develop expertise in a different but related discipline area from that of your undergraduate degree to build skills necessary for a professional career in research or industry.

The course offers a distinctive suite of specialisations to provide opportunities in advanced research training, specialised coursework and professional skills development. The first year of the course includes units related to the specialisation of your choice and is focused on research training and methods. The second year of the degree comprises a research thesis.

The flexibility offered by this course enables you to graduate with a specialised degree that has been customised to suit your research interests and career aspirations. You can choose one of the nine specialisations on offer and explore areas in engineering, information technology, biotechnology, frontier materials and nanotechnology, and sustainable regional development.

This course meets the growing need for well-trained scientists to work in applied, commercial and innovative industry environments and government organisations/departments.

As a graduate of this course you will be well-prepared for professional employment or further research training in fields aligned to your area of specialisation. Depending on the specialisation undertaken, you may find employment in a range of careers including policy development in government or non-governmental organizations (NGOs), as well as opportunities for industry researchers in engineering, information technology and frontier science.

## Indicative student workload

Approximately 150 hours of learning and assessment activities per Deakin credit point.

## Career opportunities

The course prepares students for a career in research and industry. Graduates from the proposed Master of Science (Research) will be well prepared to continue their doctoral studies at Deakin or elsewhere.

## Pathways

Students who have completed the Master of Science (Research) may continue on to undertake Higher Degree by Research study.

## Alternative exits

S504, S604.

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate mastery and specialist knowledge through the application of scientific research principles and methodologies in the investigation of recent developments within a chosen field of study. Plan and execute a substantial research project to demonstrate a deep understanding and mastery within that scientific field. Creatively apply high-level technical and cognitive skills to research activities in a professional and/or academic setting in order to demonstrate in-depth knowledge of scientific methodologies pertinent to a field of study. Demonstrate autonomy, well-developed judgement and responsibility to argue about characteristics and aspects of scientific research in the advancement of a discipline of science through the application of appropriate hypotheses, laws, facts and theories for investigation, testing, analysis, and evaluation of scientific data.
Communication	Present a reasoned argument that highlights essential details of scientific procedures, key observations, results and conclusions of scientific research in a professional manner using appropriate style, language and references including local, national, and international contributions or contexts. Apply listening skills and effective communication skills to accommodate, encourage and answer questions from a range of audience and to defend research findings and scientific propositions. Interpret the boundaries or limits of scientific information, experimental or field data, discuss error, probability, uncertainty, conclusions and arguments to justify theoretical propositions, methodologies, conclusions and professional decisions.
Digital literacy	Use well-developed technical skills, judgement and responsibility to independently locate, analyse, evaluate the merits of, synthesise and disseminate scientific literature in the planning and implementation of research projects. Reflect on information, data and results and develop strategies for disseminating research outcomes in a digital world.
Critical thinking	Appraise complex scientific methodologies and information using critical, analytical and logical reasoning from multiple perspectives for evaluating the merits of scientific methodologies, theoretical propositions and practice. Formulate research questions to test and/or contest ideas, concepts and theoretical propositions through an evidence-based well-structured research project.

Deakin graduate learning outcomes	Course learning outcomes
Problem solving	Plan and implement scientific research investigation by using evidence to identify problems and by applying analysis and synthesis skills, and appropriate scientific methodologies to solve research and/or practice problems. Demonstrate complex problem solving skills by identifying and creating solutions to real world ill-defined problems through scientific inquiry. Contribute to advancements in scientific knowledge through mastery in the use of scientific instruments and techniques to devise an investigation, and in the collection, interpretation, analysis, synthesis and dissemination of scientific results and conclusion.
Self-management	Take personal, professional and social responsibility within changing national and international professional science contexts to develop autonomy as researchers and evaluate own performance. Work autonomously, responsibly and safely to solve unstructured problems and actively apply knowledge of regulatory frameworks and scientific methodologies to make informed choices.
Teamwork	Work independently and collaboratively with advice from the supervisor towards achieving the outcomes of research project and thereby demonstrate interpersonal skills including the ability to brainstorm, negotiate, resolve conflicts, managing difficult and awkward conversations, provide constructive feedback and work in diverse professional, social and cultural contexts.
Global citizenship	Apply scientific knowledge and skills with a high level of autonomy, judgement, responsibility and accountability in collaboration with the supervisor to articulate the place and importance of scientific inquiry in the local and global context.

Approved by Faculty Board 27 July 2017

## Course rules

To complete the Master of Science (Research), students must attain 16 credit points. Most units (think of units as 'subjects') are equal to 1 credit point. So that means in order to gain 16 credit points, you'll need to study 16 units (AKA 'subjects') over your entire degree. Most students choose to study 4 units per trimester, and usually undertake two trimesters each year.

The course comprises a total of 16 credit points, which must include the following:

Year 1 (8 credit points):

- 3 core units (3 credit points)
- A specialisation comprising of four units (4 credit points)
- 1 elective unit

Year 2 (8 credit points):

- 2 x Research Thesis units (4 credit points each)

## Specialisations

Refer to the details of each specialisation for availability.

- Biotechnology
- Sustainable Regional Development

## Details of specialisations

### **Biotechnology – unit set code – SP-S000003**

*Waurin Ponds (Geelong)*

#### Overview

Biotechnology is one of the fastest growing scientific sectors. Students will benefit from the state-of-the-art facilities and cutting-edge research, while exploring their interests in agricultural, cellular and molecular biotechnology; nanotechnology and analytical techniques. Graduates completing this specialisation are highly employable, with the ability to work in industrial, innovative, regulatory, emerging and commercial biotechnology sectors. Study areas include: agricultural biotechnology, laboratory techniques for cellular and molecular biotechnology, biotechnology, frontier techniques in biotechnology and nanotechnology, and industrial and analytical techniques in biotechnology.

#### Units

SLE703	Agricultural Biotechnology
SLE712	Bioinformatics and Molecular Biology Techniques
SLE706	Frontier Techniques in Biotechnology and Nanotechnology
SLE713	Industrial and Analytical Techniques in Biotechnology

### **Sustainable Regional Development – unit set code – SP-S000082**

*Burwood (Melbourne)*

#### Overview

Sustainable Regional Development is critical to the economic performance of both developed and developing countries, especially in the face of globalization, population growth, economic structural adjustments and climate change. Two thirds of Australia's export earnings come from regional industries such as agriculture, tourism, retail, services and manufacturing. As such, demand has risen sharply for professionals with the ability to undertake regional socioeconomic and environmental planning that looks to the long-term competitive advantages of regional areas, and propose appropriate policy responses.

The specialisation is appropriate for developed and developing country contexts, and the second year research project can be focused on international (overseas) regional development situations. Graduates will develop an in-depth understanding of the key biophysical, socioeconomic, geographic and infrastructure factors that influence the development of regions, as well as the strategic and technological tools to analyse and act on information to sustainably guide regional economic development.

#### Units

SLE740	Climate Change Adaptation and Mitigation
SLE742	Systems and Strategic Thinking
SLE741	Regional Development Economics and Planning
SLE743	Regional Development Modelling

## Course duration

Course duration may be affected by delays in completing course requirements, such as accessing or completing work placements.

# Master of Engineering

<i>Year</i>	2019 course information
<i>Award granted</i>	Master of Engineering
<i>Campus</i>	Waurm Ponds (Geelong)
<i>Cloud Campus</i>	Yes
<i>Duration</i>	2 years full-time or part-time equivalent
<i>CRICOS course code</i>	025405F
<i>Deakin course code</i>	S825
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 9.

## Course overview

A full-time member of the academic staff, experienced in research, will be appointed to as supervisor for each student in the Master of Engineering. Associate supervisors, internal or external, may be appointed to assist the principal supervisor. Students may be required to meet certain attendance requirements and will complete a thesis embodying the results of research carried out in the field of study specified at the time of enrolment. Students will be referred to prospective supervisors in order to establish a possible research project.

To qualify for a Master by Research, students must demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating a substantial contribution to knowledge through the use of appropriate research principles and methods. This is in the form of a thesis of up to 50,000 words in length which will be assessed via an external examination. Although the focus of the degree is on research, students are also required to complete a minimum of one unit of coursework.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating substantial contribution to knowledge through the use of appropriate research principles and methods.
Communication	Demonstrate autonomy, expert judgement, adaptability, initiative, resilience and responsibility as a practitioner or learner.
Digital literacy	Demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating substantial contribution to knowledge through the use of appropriate research principles and methods

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	<p>Apply critical analysis and reflection to ethically research, synthesize and evaluate complex information, problems, concepts, interpretations and theories to demonstrate cognitive and technical skills in a body of knowledge or practice.</p> <p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p>
Problem solving	<p>Apply critical analysis and reflection to ethically research, synthesize and evaluate complex information, problems, concepts, interpretations and theories to demonstrate cognitive and technical skills in a body of knowledge or practice.</p> <p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p>
Self-management	Demonstrate an advanced and integrated understanding of a complex body of knowledge in one or more discipline areas by generating substantial contribution to knowledge through the use of appropriate research principles and methods.
Teamwork	<p>Apply critical analysis and reflection to ethically research, synthesize and evaluate complex information, problems, concepts, interpretations and theories to demonstrate cognitive and technical skills in a body of knowledge or practice.</p> <p>Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.</p>
Global citizenship	Demonstrate autonomy, expert judgement, adaptability, initiative, resilience and responsibility as a practitioner or learner.

*Approved by Faculty Board 7 June 2018*

# Doctor of Philosophy

<i>Year</i>	2019 course information
<i>Award granted</i>	Doctor of Philosophy
<i>Campus</i>	Burwood (Melbourne), Waurn Ponds (Geelong), Warrnambool
<i>Cloud Campus</i>	Yes
<i>Duration</i>	3 years full-time or part-time equivalent
<i>CRICOS course code</i>	016704C
<i>Deakin course code</i>	S910
<i>Approval status</i>	This course is approved by the University under the Higher Education Standards Framework.
<i>Australian Qualifications Framework (AQF) recognition</i>	The award conferred upon completion is recognised in the Australian Qualifications Framework at Level 10.

## Course overview

A full-time member of the academic staff, experienced in research, will be appointed as supervisor for each student in the Doctor of Philosophy – Environmental Science. Associate supervisors, internal or external, will be appointed to assist the principal supervisor. Students may be required to meet certain attendance requirements and will be required to complete a thesis embodying the results of research carried out in the field of study specified at the time of enrolment. Students will be referred to prospective supervisors in order to establish a possible research project. The Doctor of Philosophy is normally completed over two to four years of full-time or part-time equivalent and can be taken in either Campus or Cloud (online) mode.

## Participation requirements

Reasonable adjustments to participation and other course requirements will be made for students with a disability. Visit Deakin's website for more information.

## Course learning outcomes

Deakin graduate learning outcomes	Course learning outcomes
Discipline-specific knowledge and capabilities	Demonstrate systematic and critical understanding in one or more specialist fields or discipline areas by planning and generating a substantial and original contribution that advances scholarship or professional practice.
Communication	Demonstrate autonomy, authoritative judgement, adaptability, leadership, initiative, resilience and responsibility as an expert and leading practitioner or scholar.
Digital literacy	Demonstrate systematic and critical understanding in one or more specialist fields or discipline areas by planning and generating a substantial and original contribution that advances scholarship or professional practice.

Deakin graduate learning outcomes	Course learning outcomes
Critical thinking	Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.  Synthesise, apply and analyse existing and new knowledge in one or more discipline areas to develop new concepts or interpretations through engagement in ethical research, critical reflection, continuous evaluation and demonstration of research skills.
Problem solving	Effectively disseminate research outcomes to a variety of audiences using highly developed communication skills and work productively within a team of experts in the field.  Synthesise, apply and analyse existing and new knowledge in one or more discipline areas to develop new concepts or interpretations through engagement in ethical research, critical reflection, continuous evaluation and demonstration of research skills.
